

# **AMP**2017 **ANNUAL MEETING**

NOVEMBER 16-18, 2017

Calvin L. Rampton Salt Palace  
Convention Center  
Salt Lake City, UT

# FAST FORWARD CLONALITY:NGS

T-cell receptor & immunoglobulin clonality  
Clinically-actionable gene targets  
Minimal residual disease (MRD) testing  
Assess or track CAR-T cells & immunotherapies

For similar cost -  
vastly increase  
the breadth of  
information

Includes  
best-in-class  
bioinformatics  
software

The Invivoscribe family of NGS-based sequencing kits, LymphoTrack® Dx (CE-IVD) and LymphoTrack® (Research Use Only)\*, are developed and manufactured under global harmonization with accompanying bioinformatics for clonality, somatic hypermutation, and MRD assessment - to identify DNA sequences required to track B- and T-cell malignancies. These kits are developed for use with the leading NGS platforms. They include optimized multiplex PCR master mixes with primers incorporating platform specific adapters, and specimen tracking identification tags for a single-step library generation.

## Benefits of Next-Generation Sequencing with LymphoTrack Dx & LymphoTrack Assays

Single run sequencing  
of multiple gene targets  
reduces costs & decreases  
turnaround time

Eliminates need for  
Sanger Sequencing to  
determine somatic  
hypermutation status

MRD tracking of  
clonal populations use  
identical reagents and  
workflow

Identifies/tracks the entire  
range of clonal populations,  
including CAR-T and  
engineered T-cells

# Stop Lysing Red Blood Cells There is a Better Way with EasySep™

Lysing red blood cells (RBCs) to obtain leukocytes from blood samples can be time consuming, requires washing steps, and can leave residual cell debris that may alter cellular function or interfere with downstream assays.

## Why Use EasySep™ RBC Depletion Kit?

- **GENTLE.** Deplete RBCs immunomagnetically without the need of lysis buffer, centrifugation or additional washing steps.
- **FAST.** With no additional washing steps required to remove residual RBCs or other debris, the cell isolation is fast and simple.
- **RELIABLE.** Obtain untouched leukocytes for downstream applications including, RNA isolation or enzyme activity testing.
- **CONVENIENT.** Automate blood sample processing with RoboSep™ instruments to increase laboratory throughput.

Learn More at **Booth #1011** or  
Visit **[www.stemcell.com/RBCdepletion](http://www.stemcell.com/RBCdepletion)**

# Molecular Genetic Pathology Online Review Course

*Prepping for an exam, need a refresher, or looking for an introduction to Molecular Genetic Pathology? AMP's Molecular Genetic Pathology Online Review Course can help!*

This course is a recorded version of the 3.5 day Molecular Genetic Pathology Review Course held in June 2017. It provides a review of molecular diagnostics that is primarily focused on preparation for the Molecular Genetic Pathology (MGP) Subspecialty Certification Exam, as well as other certification exams, but can also be used as a broad overview for those looking to refresh or enhance their understanding of the topic.

Participants have the opportunity to learn directly from recognized experts in the field. The course includes a pre-test that will allow you to evaluate your current level of knowledge. Take the course in the order provided, or tailor your learning to focus on the areas where you would like to improve your understanding. The online course format allows you to set the best pace for your learning style and a post-test will help you to assess your understanding of the material presented.

We offer the institutional purchase of the MGP online course as a way to serve trainees in a single institution at a deep discount. Please contact us at [ampeducation@amp.org](mailto:ampeducation@amp.org) for more information.

## Course Director:

Gregory J. Tsongalis, PhD

Geisel School of Medicine, Dartmouth University

[educate.amp.org](http://educate.amp.org)

# Welcome to the 2017 Association for Molecular Pathology (AMP) Annual Meeting!

It has been my honor and pleasure to have chaired the Program Committee for the past year. The committee has worked diligently to prepare what I hope will be yet another fantastic series of sessions covering all aspects of molecular diagnostics.

The theme for this year's meeting is **"Where Molecular Leads Medicine to Best Patient Care."** The idea behind this theme

is that molecular diagnostics have matured to the extent that what we are doing are now more than "ancillary studies." It was my hope to get some content for this meeting that would demonstrate true clinical utility for molecular diagnostics, *i.e.*, where the work that we do leads to improved outcomes and ideally public health. Every area covered in this meeting—infectious diseases, solid tumors, hematopathology, genetics, informatics, and technical topics—can show contributions to improving patient care and clinical results.

We have also tried to include content that does not fit strictly into subdivision silos, looking for topics and speakers that would appeal to a broad group of AMP members and attendees. For example, we have plenary sessions on the impact of molecular diagnostics in cancer and inherited diseases, the interaction of the electronic medical record with mobile apps and data collection, and genome editing. The program features smaller-scale sessions exploring biomarker-driven clinical trials, data visualization, and biorepositories. We also have what I hope to be excellent discipline-focused sessions in all our topic areas, and I am especially pleased that we have expanded our offerings in infectious disease diagnostics.

I would like to take this opportunity to thank the members of the 2017 Program Committee, who attended twice-monthly conference calls for the past year and considerable additional time pursuing topics and speakers for this year's sessions. I would first like to thank the chair-elect and 2018 Program Committee chair, Lynne Abruzzo, for her help with all aspects of planning, and especially for a significant amount of tying up of loose ends. I would also like to recognize the committee members representing the various AMP subdivisions: Amy Leber, Belinda Yen-Lieberman, and David Hillyard (Infectious Diseases), Bryan Betz and Eric Duncavage (Hematopathology), Alex Mackinnon and Lynette Sholl (Solid Tumors), Ed Highsmith and Linda Jeng (Genetics), Chris Coldren and Somak Roy (Informatics) and Cindy Meadows and Lynne Whetsell (Technical Topics). All the members were great at both coming up with topics and speakers as well as "thinking outside the box" to come up with ideas that might not fit neatly into their areas of specialization. The AMP staff were an amazing source of support, keeping us on track with our mission. Sara Hamilton was the prime mover from the AMP office, and I am personally deeply indebted to her for making this program come together. I also want to acknowledge the contributions from a cast of AMP stars Oluwatemi Ayeni, Lucia Barker, Tara Burke, Elisabeth Campbell, Kathleen Carmody, Eriko Clements, Rhonda Jenkins, Laurie Menser, Mrdula Pullambhatla, TaNika Switzer, Robyn Temple-Smolkin, Michelle Weston, Mary Steele Williams, and Michele Zink. Finally, I want to thank Mel Limson, who has supported this committee over many years, and unfortunately moved on to new adventures part way through the year.

I would also like to thank our corporate sponsors and exhibitors, who have helped to support the 2017 annual meeting. I would encourage you to attend corporate workshops that are of interest to you on Wednesday 15 November. Also, please take time to visit the exhibits during meeting breaks to learn of the latest product offerings from our sponsors.

Thank you for being part of this vibrant and enthusiastic organization and helping us to continue our mission of translating discoveries in biomedical sciences into applications that improve our ability to detect, characterize and manage human diseases with the ultimate goal of improving the population's health and quality of life. Have a great time here in Salt Lake City!

For the 2017 Program Committee,

Best regards,

Daniel E. Sabath, MD, PhD

2017 Program Committee Chair

# AMP 2017 Annual Meeting

## Code of Conduct

The Association for Molecular Pathology (AMP) is committed to providing a friendly, safe, and welcoming environment for all, regardless of gender, sexual orientation, disability, race, ethnicity, religion, national origin, age, gender identity, or any other demographic group. We expect all attendees, media, speakers, AMP staff and volunteers, venue staff, contractors, guests, and exhibitors to help us ensure a safe and positive annual meeting experience for everyone.

While we cannot influence behavior outside of the official AMP annual meeting hours, we expect all participants at the AMP 2017 Annual Meeting to abide by this Code of Conduct in all venues, including ancillary events and all social gatherings. All participants are responsible for their own conduct. Anyone who is the recipient of unacceptable behavior should feel free to speak up without any fear of recrimination.

- AMP holds its collegial community in high value. Do your part to give everyone you encounter an enjoyable experience so they remember you and the meeting favorably.
- Exercise consideration and respect in your speech and actions.
- Abstain from all demeaning, discriminatory, or harassing behavior and speech.
- Respect the fact that slides and posters may include unpublished work so do not photograph them without the presenter's express permission.
- Be mindful of your surroundings and of your fellow participants. Alert Security Personnel or call 911 if you notice a dangerous situation or someone in distress.
- Notify AMP Staff of any violation of this Code of Conduct that you experience or observe.

### Unacceptable Behaviors

Unacceptable Behaviors Include:

- Photographing slides of oral presentations and posters without the express permission of the presenter/author.
- Recording of scientific and other sessions without the express permission of the presenter(s).
- Undue disruption of scientific sessions or other events.
- Intimidating, harassing, abusive, discriminatory, derogatory or demeaning speech or actions.
- Harmful or prejudicial verbal or written comments, jokes, or visual images related to gender, sexual orientation, disability, race, ethnicity, religion, national origin, age, gender identity, or any other demographic group.
- Use of provocative and/or sexual images, including in presentation slides and exhibit booths.
- Deliberate intimidation, stalking, or following.

# Code of Conduct

- Harassing photography.
- Unwelcome and uninvited attention or contact.
- Physical assault, including unwelcome touch or groping.
- Real or implied threat of physical harm.
- Real or implied threat of professional or financial damage or harm.

## What To Do If You Observe or Experience Conduct That Violates this Code:

Please contact the nearest AMP or Security Staff. All reports will be kept confidential to the extent possible. If you believe the situation is an emergency, call 911.

AMP Staff will help participants contact convention center/hotel/venue security or local law enforcement authorities, and otherwise assist those experiencing conduct that violates this Code. We value your attendance, and want your experience to be professionally rewarding and personally enjoyable.

## Consequences of Unacceptable Behavior

Unacceptable behavior from any participant at the AMP 2017 Annual Meeting, including attendees, media, presenters, AMP staff and volunteers, venue staff, guests, and exhibitors, will not be tolerated. Anyone asked to stop unacceptable behavior is expected to comply immediately.

If a participant engages in unacceptable behavior, the AMP Executive Director will determine appropriate action to be taken immediately, if any, which may include expulsion from the AMP 2017 Annual Meeting, without refund, and/or contacting local law enforcement authorities. The Board of Directors may consider the matter for additional action.

See also the *AMP Scientific Integrity Policy for Submission of Abstracts* available in the Abstracts/Posters section of the AMP 2017 Annual Meeting website.

# Highlights & General Information

## Attendee/Exhibitor Registration Desk Hours

(Convention Center, South Foyer, Lower Concourse)

Tuesday, November 14	2:00pm – 6:00pm*
Wednesday, November 15	7:00am – 5:00pm*
Thursday, November 16	6:45am – 5:00pm*
Friday, November 17	6:45am – 5:00pm
Saturday, November 18	6:45am – 2:00pm

*\*Satellite Registration will be available at the AMP  
Co-Headquarter Hotels.*

## Exhibit Hall Hours

(Convention Center, Exhibit Hall, Lower Concourse)

Thursday, November 16 (Welcome Reception in the Exhibit Hall)	11:30am – 4:30pm; 5:45pm – 7:00pm
Friday, November 17 (Appointment only demos 4:00pm – 5:00pm*)	9:00am – 4:00pm
Saturday, November 18 (Appointment only demos 8:00am – 9:00am*)	9:00am – 1:30pm

*\*Appointment only demo times are specifically for  
exhibitors and their invited guests (Registered Attendees  
or Official Guests of Exhibitors) to conduct demos in a  
quieter atmosphere than during regular Exhibit Hall hours.*

## NEW! Introducing AMP Meeting Paths

*Want to create your own Path? We are excited to announce a new and exciting way to explore the scientific program at the AMP 2017 Annual Meeting! AMP Meeting Paths are a convenient way to tailor your meeting experience around the content you most want to see. The 2017 Program Committee has carefully examined the scientific program and identified six paths that will direct you to sessions based on your favored area of interest.*

### 2017 Meeting Paths Key:

- A** = Advocacy/Lab Management Path
- T** = General Molecular Technologies Path
- ID** = Infectious Diseases Path
- IF** = Informatics Path
- IC** = Inherited Conditions Path
- O** = Oncology/Cancer Path

You can search the Program Listing on the Mobile App to find sessions included on your preferred Path.

## Highlights & General Information

# Highlights

### Welcome Reception

*Supported by Roche*

Please join us for the Welcome Reception in the Exhibit Hall, immediately following the scientific Program on Thursday, November 16th from 5:45pm – 7:00pm in the Exhibit Hall. Help us kick-off another successful Annual Meeting while networking with your friends and colleagues. This event is open to all registered Meeting Attendees.

### AMP Trainee Networking Hour

*Sponsored by the AMP Jeffrey A. Kant Leadership Award*

Join us in the first ever AMP Trainee Networking Hour immediately following the Welcome Reception on Thursday from 7:00pm – 8:00pm! This is your chance to connect with other AMP trainees over great food and drinks at a local Salt Lake City bar. All registered trainees are welcome and will receive a ticket that they may use at Gracie's Bar (326 S West Temple, Salt Lake City, UT 84101), in exchange for a free drink! Your drink ticket will be included on your badge sheet when you check-in for the Annual Meeting.

### AMP Central

Visit AMP's booth in the Exhibit Hall, centrally located at the back/center of the hall by the posters. AMP Central features unique programming including career networking opportunities, job listings, test directory assistance and the chance to meet current committee members. AMP Central is the best place to learn about all that AMP does and find out how you can get involved! For details on AMP Central events, see event listings throughout this program.

### Infectious Diseases Subdivision Town Hall

The AMP Infectious Diseases Subdivision and multiple AMP volunteers have spearheaded substantial contributions to the field of molecular diagnostics. As we continue to look to the future, AMP leadership would like to invite ID subdivision members and meeting attendees with an interest in ID to attend an open format town hall session. This session is a follow up to discussions initiated at the ID town hall session held during the AMP 2016 Annual Meeting. Please bring your ideas, energy, and enthusiasm to the conversation as we discuss new initiatives and the future of infectious disease molecular diagnostics within AMP. The ID Town Hall will be held on Friday, November 17th from 4:15pm – 5:00pm. Please see the Program Schedule for additional information.

### NEW! Infectious Diseases Special Sessions

The AMP Infectious Diseases Subdivision has worked to develop several exciting new sessions as part of this year's Annual Meeting program. These sessions will be held on Friday and Saturday at the Salt Lake Marriott Downtown at City Creek. Please check the Program Listing and Daily Descriptions for more information. If you are interested in Infectious Disease topics, we also recommend that you explore the Infectious Diseases Path. Information on Paths is available in the Program Book and Mobile App.

# Highlights & General Information

## Innovation Spotlight Stage

The Innovation Spotlight Stage (previously known as the Product Showcase) is a unique opportunity for exhibiting companies to promote a new product or service in the Exhibit Hall at the AMP 2017 Annual Meeting. The Innovation Spotlight Stage is located in the back left corner of the Exhibit Hall. Innovation Spotlight Stages are open to all Meeting Registrants and seating will be on a first come, first served basis.

Please see complete schedule and descriptions in the “Exhibits” section of the Program Book, Page 159.

## Business & Awards Session

AMP invites all Meeting Attendees to attend the AMP Business & Awards Session on Friday, November 17 at 5:15pm. Come hear how AMP is working hard to help you advance patient care. A number of awards, including the Young Investigator, Technologist and the Jeffrey A. Kant Leadership Award are presented at this session.

## AMP 2017 Social Event

The AMP Social Event will take place on Friday, November 17 at 7:00pm at the Salt Lake Marriott Downtown at City Creek. The Social Event is intended to facilitate networking opportunities between trainees, new, and long-standing AMP attendees. There will be mingling, dancing, amateur acts and great food! Attendees who purchased tickets when registering for the meeting will receive their ticket when they check-in at the registration desk for their name badge. If any tickets are still available for sale, they may be purchased at the Registration Desk.

## Mobile App

The AMP 2017 Mobile App is available for your Android, iPhone and other mobile devices. The AMP Mobile App is a robust tool allowing you to plan your meeting experience in advance and allows you to get instant updates onsite! AMP thanks NanoString Technologies, Swift BioSciences, Inc., Thermo Fisher Scientific, and Vela Diagnostics for its generous support of the AMP Mobile App. Please go to <http://amp17.amp.org/program/mobile-app/> for more information or just scan the QR code to download it now!

## Special Event: Diagnostic Strategies in Advanced NSCLC: Guiding Treatment Decisions Through Pathology

*(Separate Registration Required)*

Developed through a strategic collaboration between AMP and Medscape Education Oncology

**Wednesday, November 15**

**Location:** Salt Lake Marriott Downtown at City Creek, Grand Ballroom

**Reception:** 5:30 PM – 6:15 PM – offering hors d'oeuvres and beverages

**Symposium:** 6:15 PM – 7:30 PM

Join your colleagues at a unique and free educational event highlighting clinical trial data and practice guidelines supporting the use of ALK, EGFR, ROS1, and PD-L1 status in the treatment selection for patients with advanced NSCLC.

**Note:** Pre-Registration recommended. If you did not pre-register, please visit the AMP Registration Desk for more information.

## Highlights & General Information

# General Information

### Abstracts

A record number of abstracts were submitted this year! Please refer to the Poster section of the Program for more information on the Poster Map, Poster Listings and Author Index. The abstracts have been published in the November 2017 issue of *The Journal of Molecular Diagnostics (JMD)*. This issue is in your meetings bags. They are also available online at <http://amp17.amp.org/abstracts-posters/poster-list/>.

### Attendee Badges

Name badges are required for admittance to all scientific sessions, exhibit hall, meals and other official meeting events. Badges contain a bar code that holds the attendee's name, address, email. Exhibitors will scan badges to send information after the meeting.

### Attire

Attire is business casual for the meeting sessions and receptions, and casual for the Social Event. Remember to dress in layers and wear comfortable walking shoes.

### Business Center

The Business Center is located in the North-East corner of the convention center on the upper level, near Room 254. Some of their services include but are not limited to copy & print services, shipping & receiving, and computer access. Their standard hours of operation are Monday - Friday from 9-5 but can vary based on events occurring at the Convention Center. Please contact them for more information [businesscenter@saltpalace.com](mailto:businesscenter@saltpalace.com) or 385-468-2228. There is also a FedEx Office located two blocks away at 19 East 200 South, Salt Lake City, UT 84111. They are open 24hrs and can be reached at [usa2401@fedex.com](mailto:usa2401@fedex.com) or 801-533-9444.

### Charging Station

*Supported by NanoString Technologies*

Stop by and re-charge your electronics at the AMP Charging Station in the back left corner of the Exhibit Hall (see floorplan in the "Exhibits" section).

### City Information – Salt Lake City

Salt Lake City, Utah's capital, is a vibrant and growing city. From the range of arts and culture, music and movie festivals to the beautiful scenery, SLC has become an ideal location for vacations and meetings. We hope that AMP Annual Meeting attendees and exhibitors will be able to explore and take in all that the city has to offer. Find more information on local dining, hotels, shopping and other amenities online at: <https://www.visitsaltlake.com/>.

### Consent to Use of Photographic Images/Contact Information

Registration for and attendance at the AMP 2017 Annual Meeting constitutes the registrant's agreement with the AMP's use and distribution (both now and in the future) of the registrant or attendee's image or voice in photographs, videotapes, electronic reproductions, audiotapes of such events and activities, and inclusion of their address in the registrant mail list (email addresses are not distributed).

### Continuing Education

The AMP 2017 Annual Meeting has been planned and implemented in accordance with the Essential Areas and policies of the Accreditation Council for Continuing Medical Education through the joint providership of the American Society for Clinical

## Highlights & General Information

Pathology (ASCP) and the Association for Molecular Pathology. ASCP is accredited by the ACCME to provide continuing medical education (CME) for physicians and continuing medical laboratory education (CMLE) for non-physicians. Refer to the "Continuing Education" section for more information.

### Dining Options

Salt Lake City has a wide range of food options available for meeting attendees near the Convention Center. Find more information on local dining online at <https://www.visitsaltlake.com/restaurants/>. Please see next page for meals included in attendee registration.

### First Aid & Medical Emergencies

Before dialing "911," please dial 385-468-2220 from any house phone in the Convention Center to be instantly connected to the Security Department. Security will be able to dispatch the appropriate responder to the nearest entrance. There are always EMTs on-site during the day and there are multiple medical centers in close proximity from the property.

### Guest of Presenter Badges

If a registered attendee would like a family member or friend to see his/her invited talk or poster presentation, the registered attendee may request a session guest badge at the AMP Registration Desk. The session guest badge must be returned to the Registration Desk after the session requested. Guests should be accompanied at all times and are not permitted at breaks/meals.

### Guest of Exhibitor Badges

Each exhibiting company receives non-personalized guest badges for use during the event. Exhibitors are responsible for coordinating, issuing, and providing badges to their guests. All guests of exhibitors must be accompanied by a registered member of the exhibit staff and are permitted access to the Exhibit Hall, only. Badges must be worn at all times.

### International Exhibitors

AMP is Global! With members from more than 47 countries and meeting attendees from around the world. The AMP Annual Meeting is the gathering place for molecular diagnostic professionals from around the globe. AMP exhibitors are no exception, representing more than 8 countries, many of our exhibitors have traveled far to share their products and services with us. Look for the globe icon in the program listing to identify these exhibitors and stop by to say hello.

### Internet

Complimentary Wireless Internet is available in public spaces of the Convention Center and all meeting rooms. Please search for the "SP Guest" network and follow the instructions to connect your mobile device. You will be provided complimentary access in 30-minute increments.

### Lost & Found

The Lost & Found is located at the AMP Registration Desk. Please speak to an AMP Staff member regarding a lost item or to turn in a found item.

### Lost Name Badges

If you lose your Name badge, you can have a replacement badge printed for \$50. Please visit the Registration Desk at the Convention Center for assistance.

# Highlights & General Information

## Luggage & Coat Check

A luggage and coat check area will be made available for all attendees. Attendees utilizing this service do so at their own risk. AMP will not be responsible for any missing or stolen personal items from this area or for items that are not retrieved after the luggage & coat check closes.

North Foyer, Lower Concourse Level of the Convention Center	
Hours:	
Wednesday, November 15	7:30am – 5:30pm
Thursday, November 16	6:30am – 7:30pm
Friday, November 17	6:30am – 6:30pm
Saturday, November 18	6:30am – 5:30pm

## Meals (Continental Breakfast and Lunch)

Continental Breakfast and Lunch are provided for registered meeting attendees, only, and are included in the price of meeting registration. Exhibitors are encouraged to grab lunch onsite in the concession stands in the Exhibit Hall or at one of the variety of local venues just outside the convention center.

	Continental Breakfast Times	Lunch Times*
Thursday, November 16	7:00am – 8:00am	11:45am – 1:00pm
Friday, November 17	7:00am – 8:00am	11:45am – 1:00pm
Saturday, November 18	7:00am – 8:00am	12:15pm – 1:30pm

*\* Please go to the end of the "Highlights & General Information" section for full descriptions of lunch options.*

## News Room

The News Room is available for all qualified print, online, and broadcast news media outlets. Visit <http://amp17.amp.org/media1/media-information/> for more information or contact Andy Noble (ANoble@amp.org) or 415-722-2129. Location and hours of operation for the News Room are as follows:

AMP News Room: Convention Center, Room 150 G, Lower Concourse

Thursday, November 16	8:00am – 4:30pm
Friday, November 17	8:00am – 4:30pm
Saturday, November 18	8:00am – 12:00pm

## Parking

Parking is available for \$12/day in the South and West parking lots surrounding the Convention Center. Please ask at the AMP Registration Desk (South Foyer, Lower Concourse) for more information.

## Photography/Recording

Please be respectful of your colleagues. Do not record presentations without the speaker's permission. Do not take photographs of posters without authorization/permission of the author. Meeting attendees may be asked to leave if this causes disruption to a session.

## Poster Tube Storage

Bins for poster tubes will be available throughout the poster sections. Poster Tube Storage will NOT be staffed and is not secured. If you would like to leave your poster tube, please clearly mark it with your name and place it in one of the bins. AMP is not responsible for any lost, stolen or damaged posters or poster tubes.

# Highlights & General Information

## Ribbon Bar

Back by popular demand! Stop by the RIBBON BAR located in the Registration Area to pick-up applicable ribbon(s) for your meeting badge, *i.e.*, Committee, Speaker, Awardee, Trainee, First Time Attendee and others.

## Social Media Guidelines

We encourage the use of social media for professional networking purposes before, during and after AMP 2017. To ensure that everyone has a positive social media experience, please adhere to these guidelines:

### Do:

- Follow AMP on Twitter @AMPPath like us on Facebook [facebook.com/AMPathology](https://www.facebook.com/AMPathology), and/or join our LinkedIn group [linkedin.com/groups/2681654](https://www.linkedin.com/groups/2681654)
- Use the #AMP2017 hashtag to join the conversation and get the latest annual meeting updates
- Post about what you discover at the meeting, but be mindful of requests for confidentiality or attribution
- Share your knowledge and insights
- Be respectful and courteous to your colleagues
- Have fun!

### Don't:

- Post inflammatory, disrespectful or otherwise inappropriate comments
- Take/share photos of slides or posters without permission
- Post copyrighted/trademarked/embargoed materials

## Speaker Presentations

All available AMP 2017 speaker presentation slides can be found on the AMPED online learning management system at [educate.amp.org](https://educate.amp.org) ([educate.amp.org/store/provider/provider09.php](https://educate.amp.org/store/provider/provider09.php)). All Registered Meeting Attendees and AMP Members can access these presentations free of charge through March, 2018. Detailed instructions will be sent to all registered meeting attendees in December.

## Speaker Ready Room

If you are speaking at a scientific session and did not upload your presentation in advance of the meeting, you will need to visit the speaker ready room before your session to provide a copy of your presentation. The speaker ready room is located at the Convention Center, Room 150 DE, Lower Concourse. All presentations will be collected in the speaker ready room, and your presentation will be preloaded onto the computer in your session room. Please visit the speaker ready room at least one hour prior to the start of your session. Technicians will be available to receive your presentation during the hours listed below. Presentations will not be loaded directly onto the computers in the session room, so it is essential that you stop by the speaker ready room. You will be able to review and/or make changes to your presentation before providing it to the technicians.

### Speaker Ready Room Hours

Wednesday, November 15	12:00pm – 5:00pm
Thursday, November 16	6:30am – 5:00pm
Friday, November 17	6:30am – 5:00pm
Saturday, November 18	6:30am – 5:00pm

# Notes

# Lunch Options

**General Lunches** are open to all AMP 2017 Annual Meeting registered attendees. The General Lunches will be held in the Exhibit Hall (Convention Center, Lower Concourse) and can be accessed through the cross aisles to the right of the main Exhibit Hall entrance.

**Networking Lunches** are open to all AMP 2017 Annual Meeting registered attendees.\* They do not require payment or pre-registration. Simply show up at the appropriate networking lunch as noted below. Please note that seating is limited and available on a first come, first served basis. Networking lunches close when room capacity is filled. Please have your badge scanned as you enter the networking luncheons. This helps AMP measure outcomes and facilitate future planning.

*\*Some lunches are for specific groups of members, only – see descriptions below...*

## Thursday, November 16

### **New to AMP? First Time at the Annual Meeting? –**

#### **New Member and First Timers Lunch**

*(Hosted by the Membership Affairs Committee)*

**Time:** 11:45am – 1:00pm

**Location:** Room 253, Upper Concourse

**Speaker:** Federico A. Monzon, MD, AMP President

**Description:** New to AMP? First Time at the Annual Meeting? Join us for lunch! This event is an opportunity to network with other first time attendees and new AMP Members. Current members of the Membership Affairs Committee will be on hand to answer questions and help you kick off a great experience at this year's AMP meeting!

#### **Annual Trainee Luncheon**

*(Hosted by the Training & Education Committee)*

**Time:** 11:45am – 1:00pm

**Location:** Room 254, Upper Concourse

**Speaker:** Karen L. Kaul, MD, PhD

**Moderators:** Jeffrey Gagan, MD, PhD and Jason N. Rosenbaum, MD; T&E Committee members

**Description:** This free luncheon features an opportunity for trainees at all levels to interact and network with faculty members in molecular pathology. The informal setting permits discussion of any number of topics including: career development, academia vs. private practice vs. industry, securing a fellowship and/or a job, additional subspecialty certification, among many others. You will also learn about the benefits of AMP trainee membership. Seize the opportunity to speak to and network with some of the best and most prominent players in the field! Win valuable textbooks in the annual textbook give-away! Eat free food! Join us for this unique and valuable event!

## Lunch Options

Friday, November 17

### Going Global with AMP

*(Hosted by the International Affairs Committee)*

**Time:** 11:45am – 1:00pm

**Location:** Room 253, Upper Concourse

**Speaker:** Dr. Zandra (Sandi) Deans, UK National External Quality Assessment Service (UK NEQAS) for Molecular Genetics

**Moderator:** Rami Mahfouz, MD, MPH, Chair, International Affairs Committee

**Description:** Hosted by the International Affairs Committee, this luncheon is an opportunity for meeting attendees who reside and work outside of North America to gather, network, and discuss topics of mutual concern and interest. The International Affairs Committee (IAC) works to advance molecular pathology in other countries by providing educational programs, test development assistance, and validation through sample exchanges. Please join your fellow international colleagues at this special luncheon.

### Molecular and Medical Laboratory Technologists Lunch

*(Hosted by the Training & Education Committee)*

**Time:** 11:45am – 1:00pm

**Location:** Room 254, Upper Concourse

**Speakers:** Barbara Anderson, BS, MS; Tessara Baldi, BS; and Annette Kim, MD, PhD, T&E Committee Members

**Moderators:** Barbara Anderson, BS, MS and Tessara Baldi, BS, T&E Committee Technologist Members

**Description:** Lab Technologists and Technicians gather for a networking lunch, which includes a presentation of tech-specific initiatives and developments from the Training and Education Committee.

Saturday, November 18

### Tips and Tools for Successful Advocacy at the Local Level

*(Hosted by the Professional Relations and Economic Affairs Committees)*

**Time:** 12:15pm – 1:30pm

**Location:** Room 254, Upper Concourse

**Speakers:** Selected members of the Professional Relations and Economic Affairs Committees

**Moderator:** Jordan Laser, MD, 2018 Chair Professional Relations Committee

**Description:** The AMP advocacy program informs and influences public policy affecting molecular pathology. AMP represents its membership to the federal agencies and members of Congress who shape regulation and legislation of all areas of policy impacting our field, from reimbursement to oversight. However, true advocacy begins in your own professional communities and institutions. During this lunch, representatives from AMP's Professional Relations and Economic Affairs Committees will provide first-hand accounts of successful advocacy at the workplace as well as tips and tools for advocating within your institution. With your help, AMP can influence the future of our field and steer the course for outcomes that impact you professionally. Plan now to join us for this interactive event!

## Travel Awards 2017

### Diversity Travel Assistance Grant Awardees

*Veronica Ortega, BA, CG(ASCP)  
University of Texas Health Sciences Center, San Antonio, TX,  
USA*

*Kumari V. Vadlamudi, MT(ASCP)  
University of Texas Health Sciences Center, San Antonio, TX,  
USA*

### AMP Technologist Travel Awards

*Charles DiRienzo, MA  
Brigham & Women's Hospital, Boston, MA, USA*

*Todd S. Laughlin, BS  
University of Rochester Medical Center, Rochester, NY, USA*

*Elizabeth Lindsey, BA, MB(ASCP)  
Children's Hospital Colorado, Aurora, CO, USA*

### Intersociety Council for Pathology Information (ICPI) Trainee Travel Award

*Paige M. Kulling, PhD  
University of Virginia School of Medicine, Charlottesville, VA,  
USA*

### International Trainee Travel Awards

*Ketevani Kankava, MD, MBA  
Tbilisi State Medical University, Tbilisi, Georgia*

*Sushant Vinarkar, MD  
Tata Medical Centre, Kolkata, India*

<b>Chair</b>	Kojo S. J. Elenitoba-Johnson, MD
<b>Member</b>	Margaret Gulley, MD
<b>Member</b>	Marc Ladanyi, MD
<b>Member</b>	Ted E. Schutzbank, PhD
<b>Member</b>	Barbara A. Zehnbauer, PhD
<b>President</b>	Federico A. Monzon, MD
<b>Executive Director</b>	Mary Steele Williams, MNA, MT(ASCP)SM, CAE

## AMP 2017 Officers and Committee Members

### Clinical Practice Committee

Chair	Antonia R. Sepulveda, MD, PhD
Genetics Subdivision Representative	Monica J. Basehore, PhD
Genetics Subdivision Representative	Jess F. Peterson, MD
Hematopathology Subdivision Rep.	David S. Viswanatha, MD
Hematopathology Subdivision Rep.	Keyur Patel, MD, PhD
Infectious Diseases Subdivision Rep.	Benjamin Pinsky, MD, PhD
Infectious Diseases Subdivision Rep.	Susan Butler-Wu, PhD
Informatics Subdivision Representative	Mark J. Routbort, MD, PhD
Informatics Subdivision Representative	Mark Boguski, MD, PhD
Solid Tumors Subdivision Representative	Meera R. Hameed, MD
Solid Tumors Subdivision Representative	Kandelaria Rumilla, MD
Junior Member	Ryan J. Schmidt, MD, PhD
Junior Member	Alex Greninger, MD, PhD
President	Federico A. Monzon, MD
Executive Director	Mary Steele Williams, MNA, MT(ASCP)SM, CAE

### Economic Affairs Committee

Chair	Samuel K. Caughron, MD
Vice Chair, New Codes	Aaron D. Bossler, MD, PhD
Vice Chair, Coverage	Richard D. Press, MD, PhD
Vice Chair, Pricing	Anthony N. Sireci, MD, MS
Member	Dara L. Aisner, MD, PhD
Member	Pranil Chandra, DO
Member	Andrea Ferreira-Gonzalez, PhD
Member	Stephanie Hallam, PhD
Member	Matthew Hiemenz, MD
Member	Lloyd Hutchinson, PhD
Member	Loren Joseph, MD
Member (Ex Officio – PRC Chair)	Roger D. Klein, MD, JD
Member	Elaine Lyon, PhD
Member	Jay L. Patel, MD
Member	Victoria M. Pratt, PhD
Member	Aparna Rajadhyaksha, MD
Member	Ester Stein, MBA
Member	Katherine Tynan, PhD
Junior Member	Oana Rafael, MD
Committee Advisor	Jan A. Nowak, MD, PhD
President-Elect	Kojo S. J. Elenitoba-Johnson, MD
President	Federico A. Monzon, MD
Executive Director	Mary Steele Williams, MNA, MT(ASCP)SM, CAE

## AMP 2017 Officers and Committee Members

### Finance Committee

Chair	Andrea Ferreira-Gonzalez, PhD
President	Federico A. Monzon, MD
President-Elect	Kojo S. J. Elenitoba-Johnson, MD
Past President	Charles E. Hill, MD, PhD
Member	Sharathkumar Bhagavathi, MD
Member	Timothy T. Stenzel, MD, PhD
Member	Gail H. Vance, MD
Executive Director	Mary Steele Williams, MNA, MT(ASCP)SM, CAE

### International Affairs Committee

Chair	Rami Mahfouz, MD, MPH
Member	Adewunmi Oluseye Adeoye, MD
Member	Sheik Mohammad Khorshed Alam, MD , PhD
Member	Yoon-La Choi, MD, PhD
Member	Renata A. Coudry, MD, PhD
Member	Bibhu R. Das, PhD
Member	Andrew P. Fellowes, PhD
Member	Chang Ho Jeon, MD, PhD
Member	Imran Mirza, MD
Member	Lynette Lin Ean Oon, MD
Member	Roberta Sitnik, PhD
Member	Lei Po (Chris) Wong, PhD
Member	Denis Francis York, PhD
Germany Affiliate Coordinator	Joerg Maas
Professional Relations Liaison	David E. Barton, PhD
Liaison-Association of Indian Pathologists in North America	Priti Lal, MD
Advisor	Helen Fernandes, PhD
Advisor	Jin-Yeong Han, MD, PhD
President	Federico A. Monzon, MD
Executive Director	Mary Steele Williams, MNA, MT(ASCP)SM, CAE

### Membership Affairs Committee

Chair	Ron M. Przygodzki, MD
Member	Betsy A. Bove, PhD
Member	Gerald Capraro, PhD
Member	Yi Ding, MD, PhD
Member	Midhat S. Farooqi, MD, PhD
Member	Katherine Geiersbach, MD
Member	Lisa M. Haley, MS
Member	Giovanni Insuasti, MD
Member	Cynthia L. Jackson, PhD
Member	Wanda Reygaert, PhD
Member	Angshumoy Roy, MD, PhD
Member	Yaolin Zhou, MD
International Affairs Liaison	Rami Mahfouz, MD, MPH
President	Federico A. Monzon, MD
Executive Director	Mary Steele Williams, MNA, MT(ASCP)SM, CAE

# AMP 2017 Officers and Committee Members

## Nominating Committee

Chair	Charles E. Hill, MD, PhD
Genetics Subdivision Representative	D. Brian Dawson, PhD
Genetics Subdivision Representative	Carolyn Sue Richards, PhD
Hematopathology Subdivision Rep.	Dan Jones, MD, PhD
Hematopathology Subdivision Rep.	Rachel L. Sargent, MD
Infectious Diseases Subdivision Rep.	Susan M. Novak-Weekley, PhD
Infectious Diseases Subdivision Rep.	Jim Dunn, PhD
Informatics Subdivision Representative	Jorge Lemos Sepulveda, MD, PhD
Informatics Subdivision Representative	Brian Hanson Shirts, MD, PhD
Solid Tumors Subdivision Representative	Loren Joseph, MD
Solid Tumors Subdivision Representative	John Thorson, MD, PhD
President	Federico A. Monzon, MD
Executive Director	Mary Steele Williams, MNA, MT(ASCP)SM, CAE

## Professional Relations Committee

Chair	Roger D. Klein, MD, JD
Vice Chair	Jordan Laser, MD
Member	Linnea Baudhuin, PhD
Member	Rajyasree Emmadi, MD
Member	Jill Hagenkord, MD
Member	Robert Klees, PhD
Member	Eric Q. Konnick, MD
Member	Elaine Lyon, PhD
Member	Roberta Madej, PhD, MBA
Member	Shelby Melton, MD
Member	George J. Netto, MD
Member	Nirali Patel, MD
Member	Victoria M. Pratt, PhD
Member	Barbara Zehnbauer, PhD
Junior Member	Amy Lo, MD
Junior Member	Jill Murrell, PhD
International Affairs Liasion	David E. Barton, PhD
AMP Representative to FASEB Science Policy Committee ( <i>Ex Officio</i> )	Betsy A. Bove, PhD
President	Federico A. Monzon, MD
President-Elect	Kojo S. J. Elenitoba-Johnson, MD
Executive Director	Mary Steele Williams, MNA, MT(ASCP)SM, CAE

## AMP 2017 Officers and Committee Members

### Program Committee

Chair	Daniel E. Sabath, MD, PhD
Chair-Elect	Lynne V. Abruzzo, MD, PhD
Genetics Subdivision Representative	William Edward Highsmith, Jr, PhD
Genetics Subdivision Representative	Linda Jo Bone Jeng, MD, PhD
Hematopathology Subdivision Rep.	Bryan L. Betz, PhD
Hematopathology Subdivision Rep.	Eric J. Duncavage, MD
Infectious Diseases Subdivision Rep.	Amy L. Leber, PhD
Infectious Diseases Subdivision Rep.	Belinda Yen-Lieberman, PhD
Informatics Subdivision Rep.	Christopher D. Coldren, PhD

# Continuing Education Information

## CONTINUING MEDICAL EDUCATION (CME)

This activity ("Association for Molecular Pathology 2017 Annual Meeting") was planned and implemented in accordance with the Essential Areas and policies of the Accreditation Council for Continuing Medical Education (ACCME) through the joint providership of the American Society for Clinical Pathology (ASCP) and the Association for Molecular Pathology (AMP). ASCP is accredited by the ACCME to provide continuing medical education for physicians.

The CME and CMLE online application form will be available online (<http://amp17.amp.org/ce-credits/continuing-education/>) beginning on November 18, 2017 and must be submitted no later than December 31, 2017. You may keep track of credit by completing the Credit Tracker found on the tab divider for this section. Complete only for the sessions which you attended, then transfer your ratings per speaker on the online application form and complete the other evaluation questions to claim credit. If you did not purchase CE credit at the time of your conference registration, you will have an opportunity to request it after the meeting. See the information posted on the website listed below. Please claim CE credit by following the instructions at <http://amp17.amp.org/ce-credits/continuing-education/>. Should you have questions, contact AMP by email at [AMPEducation@amp.org](mailto:AMPEducation@amp.org).

### Meeting Objective/Target Audience

The objective of the AMP 2017 Annual Meeting is to (1) increase basic and applied pathology knowledge, focusing on the molecular diagnosis of disease, (2) provide a forum for the exchange of new research by scientists and investigators, and (3) facilitate knowledge acquisition regarding issues and challenges related to patient care, early detection and disease prevention. The AMP 2017 Annual Meeting is designed to meet the participants' educational needs in the physician competency area of Medical Knowledge, as defined by the Accreditation Council for Graduate Medical Education (ACGME) and the American Board of Medical Specialties (ABMS), and to support participants' lifelong learning towards a goal of promoting patient safety and improving patient care.

The AMP 2017 Annual Meeting is especially targeted to clinical practitioners, research scientists, medical education professionals, and students and postdoctoral fellows with an interest in gaining a basic and/or advanced understanding of diagnostic, prognostic, and therapeutic approaches in the areas of hematopathology (leukemias, lymphomas, lymphoproliferative disorders), solid tumors and soft tissue tumors, infectious diseases (viral, bacterial, fungal, parasitic), inherited diseases, and informatics with the goal of improving patient care, improving clinical practice, and enabling constructive interactions with pathologists, other health care practitioners, and laboratory directors and technologists.

### Disclosure of Financial Relationships and Resolution of Conflicts of Interest

ASCP and AMP require that audiences at CME-approved educational programs be informed of the organizers' and presenters' (speaker, faculty, author, or contributor) academic and professional affiliations, and the existence of any relevant financial relationship a presenter has with any proprietary entity producing health care goods or services consumed by, or used on patients, with the exemption of non-profit or government organizations and non-health care related companies. The intent of this disclosure is not to prevent a speaker from making a presentation. This policy allows the listener/attendee to be fully knowledgeable in evaluating the information being presented. All CME activities are evaluated by the participants for the presence of any commercial bias and this input is used for subsequent CME planning decisions. The primary purpose of this activity is educational and the comments, opinions, and/or recommendations expressed by the faculty or authors are their own and not those of ASCP or AMP.

## Continuing Education Information

Disclosure includes any relationship that may bias one's presentation or which, if known, could give the perception of bias. These situations may include, but are not limited to: 1) stock options or bond holdings in a for-profit corporation or self-directed pension plan; 2) research grants; 3) employment (full or part-time); 4) ownership or partnership; 5) consulting fees or other remuneration; 6) non-remunerative positions of influence such as officer, board member, trustee, or public spokesperson; 7) receipt of royalties; 8) speaker's bureau; 9) other. For full-time employees of industry or government, the affiliation listed in the Program will constitute full disclosure.

Several of the organizers of this educational activity disclosed a relevant financial relationship that, in the context of their presentation could be perceived by some as a real or apparent conflict of interest. The disclosures have been reviewed and conflicts of interest resolved or managed. Organizers that disclosed no relevant financial relationship are also listed.

### Organizers – Program Committee Disclosures:

- Christopher D. Coldren, PathGroup  
Employment at PathGroup, a commercial reference lab
- Eric J. Duncavage, Washington University at St. Louis  
Employment as Medical Director, Cofactor Genomics
- Amy Leber, Nationwide Children's Hospital  
Clinical trial research funding from BioFire Diagnostics. Honorarium from BioFire Diagnostics.
- Belinda Yen-Lieberman, Cleveland Clinic  
Member, Roche Diagnostics Advisory Board

*The remaining AMP 2017 Program Committee members have no relevant financial relationships to disclose:*

- Lynne V. Abruzzo, The Ohio State University
- Bryan Betz, University of Michigan
- William Edward Highsmith, Mayo Clinic
- Linda Jeng, University of Maryland School of Medicine
- Alexander Craig Mackinnon, Medical College of Wisconsin
- Cindy A. Meadows, ARUP Laboratories
- Somak Roy, University of Pittsburgh Medical Center
- Daniel E. Sabath, University of Washington
- Lynette M. Sholl, Brigham and Women's Hospital
- Lynne H. Whetsell, Saint Francis Hospital

### Organizers – Awards Committee Disclosures (AMP Award for Excellence in Molecular Diagnostics)

*The 2015 Awards Committee recommended the AMP 2017 Award for Excellence in Molecular Diagnostics recipient who presents the keynote lecture of the AMP 2017 Annual Meeting.*

*Members who disclosed a financial relationship are:*

- Kenneth Bahk, Stock options from Geneweave as a Board of Directors member.
- Angela M. Caliendo, Honorarium from Biofire Diagnostics, Cepheid, IBIS Biosciences, IncellDX, Nanosphere, Quidel, Roche Molecular as a Scientific Advisory Board member. Research funding from Hologic and T2 Biosystems as an investigator.
- Tadd S. Lazarus, Salary and stock options from QIAGEN, Inc. as an employee.

*Members of the 2015 Awards Committee who disclosed no relevant financial relationships are:*

- Charles E. Hill, (Chair of Awards Committee), Emory University School of Medicine
- Karen L. Kaul, NorthShore University Health System

## Continuing Education Information

### Disclosures of Invited Speakers of CME Scientific Sessions

Several of the invited speakers of this educational activity disclosed a relevant financial relationship that, in the context of their presentation could be perceived by some as a real or apparent conflict of interest. The disclosures have been reviewed and conflicts of interest resolved or managed. Speakers that disclosed no relevant financial relationship are listed below.

#### *The following speakers disclosed no relevant financial relationships:*

Nazneen Aziz	Nicole L. Hoppman	Laura Pasqualucci
Jesse S. Boehm	Lawrence J. Jennings	Richard Press
Joseph A. Califano	Hanlee P. Ji	Thomas W. Prior
Alexis B. Carter	Vaidehi Jobanputra	Colin Pritchard
Scott L. Carter	Melissa R. Johnson	Heidi L. Rehm
Maria Casadellà	Jennifer A. Kanakry	Mark Routbort
Larissa H. Cavallari	Alexander Lex	Somak Roy
Mine Cicek	Marilyn M. Li	Steven A. Schichman
Robert M. Cook-Deegan	Joseph J. Maleszewski	Nikolaus Schultz
Vivekananda Datta	Jonna AK Mazet	Aatur Singhi
Olivier Elemento	Jamie McDonald	Jeff Stevenson
Andrew P. Feinberg	Ann M. Moyer	Doug Turnbull
Obi L. Griffith	Charles G. Mullighan	John S. Welch
Wayne W. Grody	Deborah W. Neklason	P. Mickey Williams
Marian H. Harris	Marina N. Nikiforova	

### Disclosures of Invited Speakers of CME Scientific Sessions

- Ash A. Alizadeh  
Scientific Co-founder of CIBERMed Inc. Consultant to CIBERMed Inc. and Roche.
- Mike Angelo  
Founder of Ionpath, Inc. Stock options/shareholder in Ionpath, Inc
- Robert A. Bonomo  
Research funding from Achaogen, Allegra, Entasis, GlaxoSmithKline, Merck, Roche, Shionogi, and Wockhardt.
- Aaron D. Bossler  
Consultant fees from Novartis, Inc., and Roche Diagnostics. Research funding from Roche Diagnostics. Speaker fees from Roche Diagnostics.
- Maria G. Dominguez-Bello  
Intellectual Property Rights from Commense. Stock options/shareholder in Commense. Scientific Advisory Board Member to Commense.
- Todd E. Druley  
Consultant to Bien-Willner Physicians Group.
- Marni J. Falk  
Consulting fees from Fortress Biotech, Mitobridge, and Neurovive. Research funding from Stealth Biotherapeutics, Neurovive, and Ribonova. Former Scientific Advisory Board member to Perlstein Labs. Stock options/shareholder in Perlstein Labs.
- Ferric C. Fang  
Advisory Board member to BioFire and Cepheid. Speaker fees from BioFire, Cepheid and Roche.
- Birgit Funke  
Scientific Advisor to SeraCare LifeSciences. Salary from Veritas Genetics and Laboratory for Molecular Medicine as an employee.

## Continuing Education Information

Kimberly Hanson

Funded research grant with BioFire Diagnostics.

A. John Iafrate

Consultant fees from DebioPharm and Roche. Stock options/shareholder in ArcherDx.

J. Keith Joung

Consulting fees from Editas Medicine and Horizon Discovery. Stock options/shareholder in Beacon Genomics, Editas Medicine, Hera Biolabs, Poseida Therapeutics, and Transposagen Biopharmaceuticals. Scientific Advisory Board member to Horizon Discovery and Transposagen Biopharmaceuticals. Scientific Co-founder of Beacon Genomics. Honorarium from Eli Lilly as a speaker. Travel expenses from Eli Lilly and Dupont Pioneer as a speaker.

Daniel C. Koboldt

Royalty income from Appistry, Bina Technologies, Fera Science, Human Longevity, Janssen, Philips Electronics, Regeneron, and WuXi NextCODE.

Michael A. Lewinski

Salary from Roche Molecular Systems, Inc. as an employee.

Elaine Lyon

Consulting Fee from Complete Genomics as an Advisory Board member.

Lindsay Meyers

Salary from BioFire Diagnostics as an employee.

Frederick Nolte

Honoraria from Roche and MedScape as a speaker. Research support from Alere and Roche.

John D. Pfeifer

Co-founder of PierianDX. Royalties from PierianDX. Stock options/shareholder in PierianDX.

Christopher Polage

Consulting fees from BioFire Diagnostics, GenePOC, Seres, Meridian Bioscience, Singulex, and SlipChip. Research funding from BioFire Diagnostics and Cepheid. Research materials from Alere, Cepheid, and TechLab.

Anthony N. Sireci

Consultant to Molecular Match.

Gregory Storch

Honorarium from BioFire Diagnostics as a speaker.

David H. Spencer

Consultant to Cofactor Genomics.

Vivianna M. Van Deerlin

Consultant fee from Asuragen. Research collaboration with Asuragen.

David Wu

Research collaboration with Adaptive Biotechnologies Corporation.

***The following disclosures by speakers are not relevant financial relationships:***

Aaron D. Bossler

Research funding from Iowa Department of Public Health. Since the Iowa Department of Public Health is a state government agency, it is not considered a commercial interest as defined by the ACCME.

Jeffrey Chumley

Salary from ARUP Laboratories. Since the ARUP Laboratories are clinical laboratories providing services, it is not considered a commercial interest as defined by the ACCME.

# Continuing Education Information

Marni J. Falk  
Consulting fees from March of Dimes. Since the March of Dimes is a nonprofit organization, it is not considered a commercial interest as defined by the ACCME. Research funding from NIH. Since the National Institutes of Health is a government institution, it is not considered a commercial interest as defined by the ACCME.

Victoria M. Pratt  
Honorarium from University of Florida as a speaker. Since the University of Florida is a state institution, it is not considered a commercial interest as defined by the ACCME. Salary from Indiana University School of Medicine Genetics Laboratory. Since the Indiana University School of Medicine Genetics Laboratory is a clinical laboratory providing services, it is not considered a commercial interest as defined by the ACCME.

## Abstract Author Disclosures

Only the abstracts listed below are included as CME content of the AMP 2017 Annual Meeting and will be defended in oral platform presentations. The other abstracts submitted to the AMP 2017 Annual Meeting that are published in *The Journal of Molecular Diagnostics* are not included as a CME activity.

- GENETICS: G24; G28; G30; G44  
HEMATOPATHOLOGY: H28; H34; H60; H68  
INFECTIOUS DISEASES: ID02; ID34; ID60; ID74  
INFORMATICS: I06, I16; I20; I28  
SOLID TUMORS: ST52; ST56; ST62; ST114  
TECHNICAL TOPICS: TT24; TT76; TT82; TT92

**The following abstract/poster presenting authors disclosed no relevant financial relationships:**

Elizabeth M. Azzato	Stephen Lincoln	Keith E. Simmon
Noah A. Brown	Diana Mandelker	Megan Stonebraker
Marja Debeljak	Nathan D. Montgomery	Aijazuddin Syed
Wei Gu	Andrea L. Penton	Szabolcs Szelinger
Jessica Houskeeper	Jonas Pettersson	Amogha Tadimety
Susan J. Hsiao	Tamara Restrepo	Christina Wood-Bouwens
Melissa J. Landrum	Bekim Sadikovic	Xuemei Wu

**Disclosures of abstract/poster presenting authors:**

- Andrew Hilmer – Employment at Applied StemCell, Inc.  
Ryan J. Schmidt – Other compensation from Genomenon, Inc.

## Trainee/Technologist Early Bird Case Study Presenter Disclosures

**The following Early Bird Case Study presenting authors disclosed no relevant financial relationships**

Michael Alberti	Navin Mahadevan
Deepu Alex	Patrick Mann
Aaron Atkinson	Damon Olson
Elizabeth Barrie	Andres Quesada
Patrick R. Blackburn	Maryam Shirazi
Alex Greninger	Adam Wilberger

## Continuing Education Information

**PLEASE NOTE: Sessions that are not eligible for Continuing Medical Education (CME):**

The meeting program states those events which are not a Continuing Medical Education activity with the designation "NOT CME."

**The following events/sessions are not eligible for CME:**

- Social events and meals listed in the meeting program.
- Visiting exhibits because of standards of the ACCME that are designed to prevent commercial bias.
- Viewing posters in the Exhibit Hall because the posters are in the line of sight of commercial exhibits.

### ONLINE Continuing Education (CE) Application and Meeting Evaluation

Applications for CME and CMLE credits will be submitted ONLINE. You may apply for credit by completing the Credit Tracker found on the tab divider for this section. Complete only for the sessions which you attended, then transfer your ratings on the ONLINE application form. If you did not purchase CE credit at the time of your conference registration, you will have an opportunity to request it after the meeting. See the information posted on the website listed below.

Please claim your CE credit ONLINE at  
<http://amp17.amp.org/ce-credits/continuing-education/>.

**IMPORTANT: The deadline to claim CME/CMLE is December 31, 2017.**

Please contact AMP via email ([AMPEducation@amp.org](mailto:AMPEducation@amp.org)) if you have any questions regarding Continuing Education.

We value your comments and feedback on the AMP 2017 Annual Meeting regardless of whether you apply for CE credit. If you do not apply for CE, please submit your Meeting Evaluation no later than December 31, 2017 online at:

<http://amp17.amp.org/ce-credits/continuing-education/>  
You will receive a Certificate of Attendance upon completion.

### SAM Credit

SAM credit will be available during the 2017 AMP Annual Meeting for select talks. The talks/sessions that include SAM will be listed on <http://amp17.amp.org/ce-credits/continuing-education/>. This activity ("Association for Molecular Pathology 2017 Annual Meeting") is approved by the American Board of Pathology. Physicians should only claim credit commensurate with the extent of their participation in the activity. Participants must successfully complete the online exam (answering at least 80% of the questions correctly).

Access to the online exam will be available after the conference. AMP Education will send an email to those who purchase SAM ± CME/CMLE Credit with detailed instructions on how to claim credits.

### Deadline to purchase and claim SAM +/- CME/CMLE for the AMP 2017 Annual Meeting is January 31, 2018 11:59pm (23:59) Eastern Time.

**NOTE:** Meeting participants may receive both CME and SAM credit, but it is important that applicants understand that both types of credit cannot be claimed for the same content and the total number of credits claimed cannot exceed 21.5 hours.

By purchasing SAM credit, applicants verify that they will not claim SAM credit on any content (e.g., sessions/workshops/symposia) for which CME credit has been - or is being - claimed and vice-versa.

# Join AMP

AMP's **2,300+ MEMBERS** enjoy easy access to information and individuals who support them in their careers.

## MEMBER BENEFITS INCLUDE:

- Subscription to ***The Journal of Molecular Diagnostics***
- **Public Affairs and Advocacy** — AMP is a champion for the molecular medicine at all levels of government and regulation
- Access to peers via **CHAMP** — the AMP membership online community
- Reduced rates for the **AMP Annual Meeting**, the **AMP Global Congress**, and other educational offerings
- Complimentary access to select **Educational Offerings** on AMP's brand new online learning platform, **AMPED**
- Exclusive access to the **AMP Online Membership Directory**
- Special **Opportunities for Trainees**
- Eligibility to apply for **AMP Awards**
- AMP Members can create a listing in the **AMP Test Directory**

[WWW.AMP.ORG/JOIN](http://WWW.AMP.ORG/JOIN)

PROGRAM AT  
A GLANCE

"Collegial collaboration is why I joined. **AMP members** are the best in the field internationally. There's an expert an arm's length away on any assay you're interested in adopting."

— **Betsy A. Bove, PhD**

Vice President of Laboratory  
Regulation Compliance, Genomind, Inc.

Friday, November 17 from 8:00am - 9:00am, 1:00pm - 2:30pm and 4:15pm - 5:00pm;

Saturday, November 18 from 8:00am - 9:00am

# Notes

# AMP 2017 Annual Meeting

## Salt Lake City, UT • November 16 – 18, 2017

Note: All sessions are scheduled at the Convention Center unless otherwise noted.

AMP 2017: Program Key for "Paths" (Tracks)

**A** = Advocacy/Lab Management Path

**T** = General Molecular Technologies Path

**ID** = Infectious Diseases Path

**IF** = Informatics Path

**IC** = Inherited Conditions Path

**O** = Oncology/Cancer Path

### Tuesday, November 14, 2017

8:00am – 5:30pm	<b>AMP Reference Material Forum</b> (Separate Registration)	Marriott, Grand Ballroom ABC, Main Floor
9:45am – 11:15am	<b>Executive Committee Meeting</b> (Invitation Only)	Marriott, Deer Valley Room, Main Floor
11:30am – 6:00pm	<b>Board of Directors Meeting</b> (Invitation Only)	Marriott, Deer Valley Room, Main Floor
2:00pm – 6:00pm	<b>Attendee, Speaker, and Exhibitor Registration &amp; Express Check-In</b>	South Foyer, Lower Concourse
6:30pm	<b>Board of Directors Dinner</b> (Invitation Only)	TBD

### Wednesday, November 15, 2017

7:00am – 5:00pm	<b>Attendee, Speaker, and Exhibitor Registration &amp; Express Check-In</b>	South Foyer, Lower Concourse
7:30am – 5:00pm	<b>Committee Meetings</b> (Invitation Only)	Marriott, Various Rooms (Second Floor)
7:30am – 8:30am	<b>Registration, Continental Breakfast for Outreach Course</b>	Marriott, Grand Ballroom Foyer, Main Floor
8:30am – 3:45pm	<b>Molecular Pathology Outreach Course (MPOC)</b> (Separate Registration)	Marriott, Grand Ballroom, Main Floor
8:30am – 3:45pm	<b>Scientific Educator Workshop (SEW)</b> (Separate Registration)	Marriott, Grand Ballroom, Main Floor
4:45pm – 5:45pm	<b>Volunteer Appreciation Reception</b> (Invitation Only)	Marriott, Deer Valley Room, Main Floor
5:30pm – 7:30pm	<b>Reception &amp; Special Event: Diagnostic Strategies in Advanced NSCLC: Guiding Treatment Decisions Through Pathology</b> (Developed through a strategic collaboration between AMP and Medscape Education Oncology)	Marriott, Grand Ballroom, Main Floor
6:00pm – 7:00pm	<b>MGP Program Directors Meeting</b> (Invitation Only)	Marriott, Grand Ballroom, Main Floor

### Thursday, November 16, 2017

#### GENERAL INFORMATION:

6:30am – 8:00am	<b>Poster Set-Up</b>	Exhibit Hall, Lower Concourse
6:45am – 5:00pm	<b>Attendee, Speaker, and Exhibitor Registration &amp; Express Check-In</b>	South Foyer, Lower Concourse
11:30am – 4:30pm 5:45pm – 7:00pm	<b>Exhibit Hall Open</b> (Note: The Exhibit Hall will be closed from 4:30pm - 5:45pm)	Exhibit Hall, Lower Concourse

## Program Listing

**Thursday, November 16, 2017** continued

**7:00am – 8:00am Continental Breakfast**

*Early Bird Session  
Room Foyers*

**7:00am – 8:00am EARLY BIRD SESSIONS**

### **Standardization of Projects in Pharmacogenetics**

*Moderators: Daniel E. Sabath MD, PhD, University of Washington, Seattle, WA, USA, 2017 Program Chair and Andria Del Tredici, PhD, Millennium Health, San Diego, CA, USA*

**T** **CME** Room 250,  
Upper Concourse  
**IF**

### **AMP CYP2C19 PGx Variant Standardization Project**

*Victoria M. Pratt, PhD, Indiana University, Indianapolis, IN, USA*

### **PGx Standardization Project**

*Steven A. Schichman, MD, PhD, Central Arkansas Veterans Healthcare System, Little Rock, AR, USA*

### **The Utah Genome Project**

*Moderators: William E. Highsmith, Jr, PhD, Mayo Clinic and Foundation, Rochester, MN, USA and Jennifer Sanmann, PhD, University of Nebraska Medical Center, Omaha, NE, USA*

**IF** **CME** Room 255BC,  
Second Level  
**IC**

### **Utah Genome Project: Genetic Discovery Powered by Utah's Large Families and Population Database**

*Deborah Neklason, PhD, University of Utah, Salt Lake City, UT, USA*

### **Molecular Diagnostics for Biomarker-Driven Clinical Trials**

*Moderators: A. Craig Mackinnon, MD, PhD, Medical College of Wisconsin, Milwaukee, WI, USA and Zenta Walther, MD, PhD, Yale University School of Medicine, New Haven, CT, USA*

**O** **CME** Room 251,  
Upper Concourse  
**IF**

### **The Challenges of Development and Application of the NCI-MATCH NGS Assay**

*P. Mickey Williams, PhD, National Cancer Institute, Frederick, MD, USA*

### **Pediatric Clinical Trial Networks, Pathologist's Perspective**

*Marian H. Harris, MD, PhD, Boston Children's Hospital, Boston, MA, USA*

### **Applications of Multiplex Molecular Imaging in Cancer**

*Moderators: Lynette M. Sholl, MD, Brigham & Women's Hospital, Boston, MA, USA and Hussam Al-Kateb, PhD, University of Arizona School of Medicine, Tucson, AZ, USA*

**O** **CME** Room 255EF,  
Second Level  
**T**

### **High Dimensional Imaging of Tumor Immune Infiltrates Using MIBI**

*Michael Angelo, MD, PhD, Stanford University, Palo Alto, CA, USA*

## Program Listing

### Thursday, November 16, 2017 continued

#### 7:00am – 8:00am EARLY BIRD SESSIONS

##### Case Studies in Infectious Diseases and Genetics

Moderators: Amy L. Leber, PhD, Nationwide Children's Hospital, Columbus, OH, USA and Avni Santani, PhD, Children's Hospital of Philadelphia, Philadelphia, PA, USA

ID CME Room 355BC,  
Third Level  
IC

##### Hypertetraploid Partial Molar Pregnancy Identified by Microarray and STR Analysis, with Subsequent Choriocarcinoma Diagnosis

Elizabeth Barrie, PhD, Nationwide Children's Hospital, Columbus, OH, USA

##### Research Whole Exome Sequencing Identifies a Novel SH2D1A Variant in a 51-Year-Old Patient with CNS Lymphocytic Vasculitis

Patrick Blackburn, PhD, Mayo Clinic, Rochester, MN, USA

##### Acute Liver Failure Due to Echovirus 9 Associated with Persistent B Cell Depletion from Rituximab

Alex Greninger, MD, PhD, University of Washington, Seattle, WA, USA

##### Pyrosequencing Solves the Case of the Conflicting Bacterial Isolates

Damon R. Olson, MD, Baylor College of Medicine, Houston, TX, USA

#### 8:00am – 8:15am Break

##### 8:15am – 8:30am Opening Remarks

Daniel Sabath, MD, PhD, University of Washington Medical Center, Seattle, WA, USA and 2017 Program Chair

Ballroom,  
Lower Concourse

##### 8:30am – 9:45am Award for Excellence in Molecular Diagnostics: Presentation and Lecture

Moderators: Federico A. Monzon, MD, Castle Biosciences, Houston, TX, USA and Daniel E. Sabath MD, PhD, University of Washington, Seattle, WA, USA

O CME Ballroom,  
Lower Concourse  
T  
IC

##### The Epigenetic Basis of Common Human Disease

Andrew P. Feinberg, MD, MPH, Johns Hopkins University School of Medicine, Whiting School of Engineering, and Bloomberg School of Public Health, Baltimore, MD, USA

#### 9:45am – 10:15am Break

Ballroom,  
Lower Concourse

#### 10:15am – 11:15am ONCOLOGY/CANCER PLENARY SESSION

##### Molecular Genetics and Biomarkers of B-cell Leukemias and Lymphomas

Moderators: Bryan L. Betz, PhD, University of Michigan, Ann Arbor, MI, USA and Eric J. Duncavage, MD, Washington University, Saint Louis, MO

O CME Ballroom,  
Lower Concourse

##### Precursor B-cell Neoplasms (ALL)

Charles G. Mullighan, MBBS (Hons), MSc, MD, St. Jude Children's Research Hospital, Memphis, TN, USA

##### Genetic and Epigenetic Drivers of Diffuse Large B-cell Lymphoma

Laura Pasqualucci, MD, Columbia University Medical Center, New York, NY, USA

# Program Listing

Thursday, November 16, 2017 continued		
11:45am – 1:00pm	<b>General Lunch, Exhibit Hall, Exhibit Level</b> (entrance through Exhibit Hall)  Networking Lunches: Please see lunch descriptions in the “Highlights & General Information” section of the Program Book, Page 17.  <b>AMP Central Activities:</b> Meet & Greet: Publications & Communication Committee Meet & Greet: Nominating Committee Test Directory assistance and demonstrations	Various locations, see program
1:00pm – 2:30pm	<b>WORKSHOP SESSIONS</b>	
	<b>MRD Assessment in Acute Leukemias</b> Moderators: Eric J. Duncavage, MD, Washington University, Saint Louis, MO and Linsheng Zhang, MD, PhD, Emory University School of Medicine, Atlanta, GA, USA	O CME IF Room 355BC, Third Level
	<b>A Clinical Trial to Improve Risk Assessment in Acute Myeloid Leukemia that Uses Enhanced Exome Sequencing to Detect Leukemia Clearance Following Therapy</b> David H. Spencer, MD, PhD, Washington University School of Medicine, St. Louis, MO, USA	
	<b>Next-generation Sequencing for Detecting MRD in Acute Lymphoblastic Leukemia</b> David Wu, MD, PhD, University of Washington, Seattle, WA, USA	
	<b>Discovering the Links: Infectious Agents and Cancer</b> Moderators: Belinda Yen-Lieberman, PhD, The Cleveland Clinic Foundation, Cleveland, OH, USA and Deepu Alex, MD, PhD, Memorial Sloan Kettering Cancer Center, New York, NY, USA	O CME ID Room 251, Upper Concourse
	<b>HPV and Head and Neck Cancer</b> Joseph A. Califano, MD, University of California, San Diego, CA, USA	
	<b>Blood-based Assessment of EBV DNA as a Tumor Marker</b> Jennifer A. Kanakry, MD, National Cancer Institute, National Institutes of Health, Bethesda, MD, USA	
	<b>Pharmacogenomics Implementation</b> Moderators: Linda Jo Bone Jeng, MD, PhD, University of Maryland at Baltimore, Baltimore, MD, USA and Joel Lefferts, PhD, Dartmouth-Hitchcock Medical Center, Lebanon, NH, USA	IF CME IC Room 255BC, Second Level
	<b>Clinical Implementation of Pharmacogenomics: From Reactive Testing to Preemptive Testing</b> Ann M. Moyer, MD, PhD, Mayo Clinic, Rochester, MN, USA	
	<b>Implementing and Assessing Outcomes with Genotype-Guided Therapy</b> Larisa H. Cavallari, PharmD, University of Florida, College of Pharmacy, Gainesville, FL, USA	

## Program Listing

### Thursday, November 16, 2017 continued

#### Bioinformatic Frontiers: Dissecting the Genetics of Cancer

Moderators: Somak Roy, MD, University of Pittsburgh Medical Center, Pittsburgh, PA, USA and Lynette M. Sholl, MD, Brigham & Women's Hospital, Boston, MA, USA

O CME Room 250, Upper Concourse  
IF

#### Computational Dissection of Intra-tumor Genetic Heterogeneity and Applications to the Study of Cancer Treatment, Evolution, and Metastasis

Scott L. Carter, PhD, Dana-Farber Cancer Institute, Boston, MA, USA

#### Strategies and Challenges for Somatic Mutation Detection by Next-gen Sequencing

Daniel C. Koboldt, MSc, Institute for Genomic Medicine at Nationwide Children's Hospital, Columbus, OH, USA

#### Genetics of Spinal Muscular Atrophy and Amyotrophic Lateral Sclerosis: A Timely Review

Moderators: Lynne V. Abruzzo, MD, PhD, Ohio State University Medical Center, Columbus, OH, USA and Jianling Ji, MD, Children's Hospital Los Angeles, Los Angeles, CA, USA

IC CME Room 255EF, Second Level

#### Perspectives and Diagnostic Considerations in Spinal Muscular Atrophy

Thomas W. Prior, PhD, Ohio State University, Columbus, OH, USA

#### Genetics of ALS

Vivianna M. Van Deerlin, MD, PhD, University of Pennsylvania, Perelman School of Medicine, Philadelphia, PA, USA

#### 2:30pm – 4:15pm Coffee Break – Visit Exhibit Hall, AMP Central and Posters

(Award Applicant Posters Attended)

Exhibit Hall, Lower Concourse

#### AMP Central Activities:

Career Networking Mixer – Technologists  
Meet & Greet: Subdivision Leadership

#### 4:15pm – 5:45pm INFECTIOUS DISEASES PLENARY SESSION

#### The Hunt for Microbes: The Beginning of the End of the Pandemic Era

Moderators: Amy L. Leber, PhD, Nationwide Children's Hospital, Columbus, OH, USA and Belinda Yen-Lieberman, PhD, The Cleveland Clinic Foundation, Cleveland, OH, USA

ID CME Ballroom, Lower Concourse

#### Microbial Anthropology

Maria G. Dominguez-Bello, PhD, BSc, MSc, New York University School of Medicine, New York, NY, USA

#### A Collaborative Effort to End the Pandemic Era: The Global Virome Project

Jonna Mazet, DVM, MPVM, PhD, One Health Institute, University of California, Davis, CA, USA

	<b>Single Molecule Quantification of Rare DNA and RNA Variants in Heterogeneous Samples</b> <i>Todd E. Druley, MD, PhD, Washington University School of Medicine, St. Louis, MO, USA</i>	

# Program Listing

## Friday, November 17, 2017 continued

**Coding (and Other) Conundrums**
A
CME
Room 255EF, Second Level

(Sponsored by the Economic Affairs Committee)  
 Moderator: Samuel K. Caughron, MD, MAWD Pathology Group, North Kansas City, MO, (EAC Chair)

**Panelists:**  
 Aaron D. Bossler, MD, PhD, University of Iowa, Iowa City, IA, USA  
 (EAC Vice-Chair New Codes Subcommittee)  
  
 Richard D. Press, MD, PhD, Oregon Health & Sciences University, Portland, OR, USA  
 (EAC Vice-Chair Coverage Subcommittee)

Anthony N. Sireci, MD, Columbia University Medical Center, New York, NY, USA  
 (EAC Vice-Chair Pricing Subcommittee)

**Case Studies in Solid Tumors**
O
CME
Room 355BC, Third Level

Moderators: A. Craig Mackinnon, MD, PhD, Medical College of Wisconsin, Milwaukee, WI, USA and Anthony Snow, MD, University of Iowa Hospitals and Clinics, Iowa City, IA, USA

**A Case of MSI-high Colorectal Cancer Responsive to Checkpoint Blockade Immunotherapy after Progression to Metastatic Disease**  
 Maryam Shirazi, MD, Columbia University Medical Center, New York, NY, USA

**RBM10-TFE3: A Potential Diagnostic Pitfall Due to Cryptic Intrachromosomal Xp11.2 Inversion Resulting in False-negative TFE3 FISH Renal Cell Carcinoma**  
 Deepu Alex, MD, PhD, Memorial Sloan Kettering Cancer Center, New York, NY, USA

**Not So Ancillary: A Case of Correction of Primary Diagnosis with Molecular Studies**  
 Adam Wilberger, MD, University of Colorado Hospital, Aurora, CO, USA

**Mutation Signature as a Diagnostic Clue in Lung Carcinoma**  
 Navin Mahadevan, MD, PhD, Brigham and Women's Hospital, Boston, MA, USA

8:00am – 8:15am
 **Break**

8:00am – 9:00am
 **ID Special Session: Molecular Infectious Disease Testing: Point of Care Challenges**
ID
CME
Marriott, Deer Valley Room, Main Floor

Moderators: Belinda Yen-Lieberman, PhD, The Cleveland Clinic Foundation, Cleveland, OH, USA and David R. Hillyard, MD, ARUP Laboratories, Inc, Salt Lake City, UT, USA  
  
**Molecular Point-of-Care Tests for Infectious Diseases: Opportunities and Challenges**  
 Frederick S. Nolte, PhD, Medical University of South Carolina, Charleston, SC, USA

Program Listing

Friday, November 17, 2017 continued

8:15am – 9:45am INFORMATICS PLENARY SESSION

**Molecular Informatics at Scale for Genomics-based Personalized Cancer Care**  
*Moderators: Christopher D. Coldren, PhD PathGroup, LLC, Nashville, TN, USA and Somak Roy, MD, University of Pittsburgh Medical Center, Pittsburgh, PA, USA*

**Molecular Pathology Informatics – Toolsets and Infrastructures for Supporting Clinical Trials**  
*Mark Routbort, MD, PhD, University of Texas MD Anderson Cancer Center, Houston, TX, USA*

**Interpreting the Cancer Genome: Identifying Driver Alterations and Therapeutic Options**  
*Nikolaus Schultz, PhD, Memorial Sloan Kettering Cancer Center, New York, NY, USA*

IF CME Ballroom, Lower Concourse

9:45am – 10:45am Coffee Break – Visit Exhibit Hall, AMP Central and Posters

Exhibit Hall, Lower Concourse

**AMP Central Activities:**  
*Meet & Greet: Economic Affairs Committee*  
*Meet & Greet: Professional Relations Committee*

10:45am – 11:45am WORKSHOP SESSIONS

**Platform Presentations of Selected Genetics Abstracts**  
*Moderators: Linda Jo Bone Jeng, MD, PhD, University of Maryland at Baltimore, Baltimore, MD, USA and Catherine Cottrell, PhD, Nationwide Children's Hospital, Columbus, OH, USA*

**G24 – Discovery of Unique Disease- and Gene-specific Peripheral Blood DNA Methylation Signatures Allows Molecular Diagnosis and VUS Classification in Hereditary Genetic Syndromes**  
*Bekim Sadikovic, PhD, London Health Sciences Centre, Western University, Ontario, Canada*

**G44 – Runs of Homozygosity (ROH) Reveal that Segmental-UPD Occurs as a Result of Recombination Mediated Repair of Genomic Imbalance**  
*Andrea L. Penton, PhD, University of North Carolina at Chapel Hill, Chapel Hill, NC, USA*

**G30 – Improved Screening for Cancer Predisposition Mutations in Patients with Advanced Solid Tumors Enabled by Tumor-normal Sequencing**  
*Diana Mandelker, MD, PhD, Memorial Sloan Kettering Cancer Center, New York, NY, USA*

**G28 – Short Tandem Repeat Analysis Reveals a High Rate of Partial Hydatidiform Moles in Triploid Conceptions Identified by Prenatal Chromosome Microarray**  
*Xuemei Wu, MD, PhD, Oregon Health & Science University, Portland, OR, USA*

IC CME Room 255BC, Second Level

## Friday, November 17, 2017 continued

### Platform Presentations of Selected Hematopathology Abstracts

Moderators: Bryan L. Betz, PhD, University of Michigan, Ann Arbor, MI, USA and Jacqueline Payton, MD, PhD, Washington University School of Medicine, St Louis, MO, USA

**O** **CME** Room 251, Upper Concourse

#### H28 – Haplotype Counting for Sensitive AML Relapse Detection

Marija Debeljak, BSc, Johns Hopkins University, Baltimore, MD, USA

#### H60 – Comparison of Clinical Digital Karyotyping by Comprehensive Next Generation Sequencing with Standard Cytogenetic Analysis in Pediatric Leukemia

Elizabeth M. Azzato, MD, PhD, MPH, St. Jude Children's Research Hospital, Memphis, TN, USA

#### H68 – Diagnostic Yield of Somatic Mutation Detection in Hematologic Malignancies Does Not Increase with Additional Mutation Analysis, and Supports More Focused Disease-specific Testing Models

Szabolcs Szelinger, PhD, University of California, Los Angeles, CA, USA

#### H34 – Implementation Considerations: Designing and Medically Vetting a Targeted Gene Panel for Hematologic Malignancies

Michelle Grant, DO, University of Vermont Medical Center, Burlington, VT, USA

### Platform Presentations of Selected Infectious Diseases Abstracts

Moderators: Amy L. Leber, PhD, Nationwide Children's Hospital, Columbus, OH, USA and Shelby Melton, MD, VA North Texas Health Care System, Dallas, TX, USA

**ID** **CME** Room 355BC, Third Level

#### ID74 – Detection of Resistance-Associated Substitutions in the Hepatitis C Viral Genome using the Sentosa SQ Hepatitis C Virus Genotyping Next-Generation Sequencing Assay

Jonas Pettersson, PhD, University of Southern California, Los Angeles, CA, USA

#### ID02 – Pathogen Detection by Metagenomic Next Generation Sequencing of Purulent Body Fluids

Wei Gu, MD, PhD, University of California, San Francisco, CA, USA

#### ID34 – Challenges Associated with Developing Rapid Molecular Diagnostics for Detection of Antibiotic Resistance

Megan Stonebraker, BSc, Diatherix Laboratories, Huntsville, AL, USA

#### ID60 – Extreme One-Step RT-PCR: Potential for Point-of-Care Viral Detection

Jessica A. Houskeeper, MRes, University of Utah, Salt Lake City, UT, USA

## Program Listing

Friday, November 17, 2017 continued

### Platform Presentations of Selected Informatics Abstracts

IF CME Room 255EF,  
Second Level

*Moderators: Christopher D. Coldren, PhD, PathGroup, LLC, Nashville, TN, USA and Nefize Sertec Kip, Icahn School of Medicine at Mount Sinai, New York, NY, USA*

#### I06 – A New Allele-centric VCF File for Variants in ClinVar

*Melissa J. Landrum, PhD, National Center for Biotechnology, National Library of Medicine, National Institutes of Health, Bethesda, MD, USA*

#### I16 – Homopolymer Compression Improves Reference-Free, Kmer Based Whole Genome Strain Comparison for IonTorrent Data

*Keith E. Simmon, PhD, ARUP Laboratories, Salt Lake City, UT, USA*

#### I20 – Redesigning the Molecular Pathology Clinical Report for the Next-generation Genomic Era: The MSKCC Experience with the MSK-IMPACT Assay

*Aijazuddin Syed, MSc, Memorial Sloan Kettering Cancer Center, New York, NY, USA*

#### I28 – An Interlaboratory Assessment of Complex Variant Detection Using Multiplexed Positive Controls

*Stephen Lincoln, Invitae, San Francisco, CA, USA*

### Platform Presentations of Selected Solid Tumors Abstracts

O CME Room 250,  
Upper Concourse

*Moderators: Lynette M. Sholl, MD, Brigham & Women's Hospital, Boston, MA, USA and Jacquelyn Reuther, PhD, Baylor College of Medicine, Houston, TX, USA*

#### ST52 – Clinical Cancer Whole Exome and Transcriptome Sequencing of Pediatric Tumors at Columbia University Medical Center: Laboratory Perspective at Three Years

*Susan J. Hsiao, MD, PhD, Columbia University Medical Center, New York City, NY, USA*

#### ST56 – Clinical Utility of Large Scale Genomic Sequencing of Solid Tumors at a Large Academic Medical Center

*Noah A. Brown, MD, University of Michigan, Ann Arbor, MI, USA*

#### ST114 – Identification of Germline Variants in Tumor Genomic Sequencing Assays: Usefulness of Variant Allele Fraction and Population Variant Databases

*Nathan D. Montgomery, MD, PhD, University of North Carolina, Chapel Hill, NC, USA*

#### ST62 – Integrated Molecular Diagnostic Call Criteria for MET Exon 14 Skipping in Lung Cancer

*Ryan J. Schmidt, MD, PhD, Harvard Medical School, Boston, MA, USA*

	<b>Panelists</b> <i>Gregory A. Storch, MD, Washington University School of Medicine, St. Louis, MO, USA</i>	
	<i>Kimberly Hanson, MD, MHS, University of Utah, Salt Lake City, UT, USA</i>	

2:30pm – 3:30pm	<b>Coffee Break – Visit Exhibit Hall, AMP Central and Posters</b> <i>(Even-numbered posters attended)</i>	Exhibit Hall, Lower Concourse
	<b>AMP Central Activities:</b> <i>Career Networking Mixer – Mid-Career</i> <i>Meet &amp; Greet: Membership Affairs Committee</i>	

## 3:30pm – 5:00pm SYMPOSIUM SESSIONS

	<b>Genome Evolution and Therapy Resistance in Lymphoid and Myeloid Neoplasms</b> <i>Moderators: Bryan L. Betz, PhD, University of Michigan, Ann Arbor, MI, USA and Eric J. Duncavage, MD, Washington University, Saint Louis, MO</i>	<b>O</b> <b>CME</b> <i>Room 155, First Level</i>
	<b>Correlation of AML and MDS Mutation Burdens and Response to Decitabine in the Peripheral Blood and Bone Marrow</b> <i>John S. Welch, MD, PhD, Washington University School of Medicine, St. Louis, MO, USA</i>	
	<b>Dynamic Monitoring of Lymphoma Genome Evolution</b> <i>Ash A. Alizadeh, MD, PhD, Stanford University School of Medicine, Stanford, CA, USA</i>	

## Program Listing

### Friday, November 17, 2017 continued

**Molecular Testing in the Practice of Cardiology**  
Moderators: William E. Highsmith, Jr, PhD, Mayo Clinic and Foundation, Rochester, MN, USA and Linda Jo Bone Jeng, MD, PhD, University of Maryland at Baltimore, Baltimore, MD, USA

**IC** **CME** Ballroom, Lower Concourse

**Phenotype to Genotype: How Traditional Techniques Pave the Way to Targeted Testing and Individualized Medicine**

Joseph J. Maleszewski, MD, Mayo Clinic, Rochester, MN, USA

**From Genes to Genomes: Evolution of Molecular Testing for Inherited Cardiomyopathies**

Birgit Funke, PhD, Veritas Genetics, Danvers, MA, USA, Harvard Medical School, Boston, MA, USA

4:15pm – 5:00pm **ID Town Hall Meeting**  
Moderator: David R. Hillyard, MD, ARUP Laboratories, Inc, Salt Lake City, UT, USA

**ID** **CME** Marriott, Deer Valley Room, Main Floor

5:00pm – 5:15pm **Break**

5:15pm – 6:30pm **Business & Awards Session**

Room 251, Upper Concourse

7:00pm – 10:30pm **AMP 2017 Social Event**  
(Separate Registration)

Marriott, Grand Ballroom A-F, Main Floor

### Saturday, November 18, 2017

6:45am – 2:00pm **Attendee, Speaker, and Exhibitor Registration & Express Check-In**

South Foyer, Lower Concourse

9:00am – 1:30pm **Exhibit Hall Open**

Exhibit Hall, Lower Concourse

12:30pm – 1:30pm **Poster Removal**

Exhibit Hall, Lower Concourse

7:00am – 8:00am **Continental Breakfast**  
Supported by Myriad Genetics Laboratories, Inc.

Early Bird Session Room Foyers

7:00am – 8:00am **EARLY BIRD SESSIONS**

**Biorepositories in Precision Medicine**  
Moderators: Lynne V. Abruzzo, MD, PhD, Ohio State University Medical Center, Columbus, OH, USA and Kristy Crooks, PhD, University of Colorado, Aurora, CO, USA

**T** **CME** Room 255BC, Second Level

**The Role of Biobanks in Precision Medicine Research and Care**

Nazneen Aziz, PhD, Kaiser Permanente Research Bank, Oakland, CA, USA

**The “All of Us” Research Program- Precision Medicine Initiative: 1 Million Cohort**

Mine S. Cicek, PhD, Mayo Clinic, Rochester, MN, USA

**AMP Bioinformatics Pipeline Validation Working Group**

(Sponsored by the Clinical Practice Committee)  
Moderator: Antonia R. Sepulveda, MD, PhD, Columbia University Medical Center, New York, NY, USA

**IF** **CME** Room 251, Upper Concourse

**AMP Bioinformatics Pipeline Validation Working Group: Development of Guidelines**

Somak Roy, MD, University of Pittsburgh Medical Center, Pittsburgh, PA, USA

**New AMP Guidelines on Validating Next Generation Sequencing Bioinformatics Pipelines**

Alexis B. Carter, MD, Children's Healthcare of Atlanta, Atlanta, GA, USA

## Program Listing

**Saturday, November 18, 2017** continued

### **Molecular Pathology of Pancreatic Neoplasms**

Moderators: Lynette M. Sholl, MD, Brigham & Women's Hospital, Boston, MA, USA and Sinchita Roy Chowdhuri, MD, PhD, MD Anderson Cancer Center, Houston, TX, USA

**O** **CME** Room 250, Upper Concourse

### **Molecular Diagnostic Testing for the Detection of Early Pancreatobiliary Neoplasms**

Aatur Singhi, MD, PhD, University of Pittsburgh Medical Center Presbyterian, Pittsburgh, PA, USA

### **Platform Presentations of Selected Technical Topics Abstracts**

Moderators: Cindy A. Meadows, ARUP Laboratories, Salt Lake City, UT, USA and Lynne Whetsell, Saint Francis Hospital, Tulsa, OK, USA

**T** **CME** Room 255EF, Second Level

#### **TT92 - Successful Extraction of RNA from Archived Bone Marrow Aspirate Smears for Use in Targeted RNA Sequencing**

Tamara Restrepo, BSc, Boston Children's Hospital, Boston, MA, USA

#### **TT82 - High Performance Detection of Cancer Mutations from Circulating DNA Using Single Color Digital PCR**

Christina Wood-Bouwens, Stanford School of Medicine, Stanford, CA, USA

#### **TT24 - Screening Circulating Nucleic Acids of Pancreatic Ductal Adenocarcinoma Using a Plasmonic Nanosensor**

Amogha Tadimety, Dartmouth College, Hanover, NH, USA

#### **TT76 - Engineering of Isogenic Cell Lines Using the CRISPR/Cas9 Technology and Precise Characterization of Low Allelic Frequency FFPE Cell Line Blocks for Use as Molecular Reference Standards**

Andrew Hilmer, PhD, Applied Stem Cell, Milpitas, CA, USA

### **Case Studies in Hemepath and Informatics**

Moderators: Eric J. Duncavage, MD, Washington University, Saint Louis, MO and Jennifer Dunlap, MD, Oregon Health & Science University, Portland, OR, USA

**O** **CME** Room 355BC, Third Level  
**IF**

#### **Inv(16) Incidentally Detected by Leukemia Translocation Panel Screen in a Patient with Therapy-related Acute Myeloid Leukemia**

Andres E. Quesada, MD, The University of Texas M.D. Anderson Cancer Center, Houston, TX, USA

#### **A Confounding Case of Polycythemia Vera**

Aaron Atkinson, PhD, Dartmouth-Hitchcock Medical Center, Lebanon, NH, USA

#### **Identifying Patients at Risk for Myelodysplastic Syndrome through Next Generation Sequencing of Cytopenias with Equivocal or Absent Morphologic Dysplasia**

Patrick Mann, MD, Washington University, St. Louis, MO, USA

#### **Detection of the Controversial ASXL1 c.1934dupG (p.G646Wfs\*12) Insertion Variant From Targeted Next-generation Sequencing (NGS) Data**

Michael Alberti, MD, PhD, Washington University, St. Louis, MO, USA

## Program Listing

### Saturday, November 18, 2017 continued

#### 8:00am – 8:15am Break

8:00am – 9:00am	<b>ID Special Session: Technologist Round Table: Troubleshooting in Molecular ID Lab</b> <i>Moderator: David R. Hillyard, MD, ARUP Laboratories, Inc, Salt Lake City, UT, USA</i>	ID	CME	Marriott, Deer Valley Room, Main Floor
	<b>Passing the Baton: Keys to Successful Implementation of Laboratory Developed Tests (LDTs) and FDA-cleared Tests</b> <i>Melissa R. Johnson, BSc, ARUP Laboratories, Salt Lake City, UT, USA</i>			
	<b>Passing the Baton: Keys to Successful Implementation of Laboratory Developed Tests (LDTs) and FDA-cleared Tests</b> <i>Jeff Stevenson, PhD, ARUP Laboratories, Salt Lake City, UT, USA</i>			
	<b>Passing the Baton: Keys to Successful Implementation of Laboratory Developed Tests (LDTs) and FDA-cleared Tests</b> <i>Jeffrey Chumley, MSc, MLS(ASCP)CM, ARUP Laboratories, Salt Lake City, UT, USA</i>			

#### 8:15am – 9:45am INHERITED CONDITIONS PLENARY SESSION

<b>Mitochondrial Disease: Diagnosis, Treatment and Prevention</b> <i>Moderators: William E. Highsmith, Jr, PhD, Mayo Clinic and Foundation, Rochester, MN, USA and Linda Jo Bone Jeng, MD, PhD, University of Maryland at Baltimore, Baltimore, MD, USA</i>	IC	CME	Ballroom, Lower Concourse
<b>Overview of Mitochondrial Disease and Nuclear Genetic Causes</b> <i>Marni J. Falk, MD, Children's Hospital of Philadelphia, Philadelphia, PA, USA, University of Pennsylvania, Perelman School of Medicine, Philadelphia, PA, USA</i>			
<b>Mitochondrial DNA Disease: Etiology, Diagnosis, and Prevention</b> <i>Sir Doug Turnbull, MBBS, MD, PhD, Newcastle University, Newcastle, UK</i>			

#### 9:45am – 10:45am Coffee Break – Visit Exhibits, AMP Central and Posters

(Odd-numbered posters attended)

**AMP Central Activities:**  
Meet & Greet: Clinical Practice Committee

#### 10:45am – 12:15pm WORKSHOP SESSIONS

<b>Whole Exome Sequencing in Clinical Practice</b> <i>Moderators: Somak Roy, MD, University of Pittsburgh Medical Center, Pittsburgh, PA, USA and Brian Shirts, MD, PhD, University of Washington, Seattle, WA, USA</i>	O	CME	Room 250, Upper Concourse
<b>Development and Validation of a Whole-exome Sequencing Test for Simultaneous Detection of Point Mutations, Indels and Copy-number Alterations for Precision Cancer Care</b> <i>Oliver Elemento, PhD, Institute for Precision Medicine, Weill Cornell Medicine, New York, NY, USA</i>			
<b>Integrated Genomic Profiling Using Clinical Whole Genome and Transcriptome Sequencing to Enable Precision Oncology</b> <i>Vaidehi Jobanputra, PhD, New York Genome Center, New York, NY, USA</i>			

## Program Listing

**Saturday, November 18, 2017** continued

### **Crowd-sourcing the Expert Curation of Germline and Somatic Variants: CIViC, ClinGen and ClinVar**

*Moderators: Christopher D. Coldren, PhD, PathGroup, LLC, Nashville, TN, USA and Hyunseok Kang, MD, Counsyl, Inc., San Francisco, CA, USA*

**IF** **CME** Room 255EF,  
Second Level

**IC**

### **ClinGen and ClinVar: Building Resources to Support Gene and Variant Interpretation**

*Heidi L. Rehm, PhD, Harvard Medical School, Boston, MA, USA*

### **CIViC: A Curation Portal and Knowledgebase for Cancer Variant Interpretation**

*Obi L. Griffith, PhD, Washington University School of Medicine, St. Louis, MO, USA*

### **Molecular Detection of Resistance: Ready for Prime Time?**

*Moderators: Belinda Yen-Lieberman, PhD, The Cleveland Clinic Foundation, Cleveland, OH, USA and Alex Greninger, MD, PhD, University of Washington, Seattle, WA, USA*

**ID** **CME** Room 251,  
Upper Concourse

### **Bacterial Resistance: Detection with Molecular Methods**

*Robert A. Bonomo, MD, Louis Stokes VA Medical Center, Cleveland, OH, USA*

### **Deep Sequencing for HIV-1 Clinical Management**

*Maria Casadellà, PhD, IrsiCaixa AIDS Research Institute, Barcelona, Spain*

**Review and Implementation of New AMP Guidelines on NGS Somatic Variant Test Validation, Interpretation, and Reporting**  
(Sponsored by the Clinical Practice Committee)  
*Moderator: Antonia R. Sepulveda, MD, PhD, Columbia University Medical Center, New York, NY, USA*

**O** **CME** Room 255BC,  
Second Level

### **AMP/CAP Guidelines for Validation of Next-Generation Sequencing-Based Oncology Panels**

*Lawrence J. Jennings, MD, PhD, Ann & Robert H. Lurie Children's Hospital of Chicago, Chicago, IL, USA*

### **AMP/ASCO/CAP Standards and Guidelines of Somatic Variant Interpretation and Reporting**

*Marilyn M. Li, MD, Department of Pathology and Laboratory Medicine, University of Pennsylvania Perelman School of Medicine, Philadelphia, PA, USA*

### **Implementation of NGS Somatic Variant Guidelines into Clinical Practice**

*Marina N. Nikiforova, MD, University of Pittsburgh Medical Center, Pittsburgh, PA, USA*

## ONLINE LEARNING FOR MOLECULAR MEDICINE PROFESSIONALS

AMP is pleased to introduce our brand new online learning management platform, AMPED

AMPED aims to bring the world-renowned, cutting edge content you have come to expect from AMP's live events, but with the convenience of learning from your home, office, or lab. AMPED can help you to get up to speed on current trends and techniques or provide a refresher on foundational concepts.

*Many of our educational offerings include the opportunity to earn CME/CMLE and/or SAM credit.*

**The ever-expanding selection of content includes:**

- **NGS 101 Webinar Series**
- **AMP Global Congress Highlights**
- **ONLINE MGP Review Course**
- **The Molecular Pathology Toolkit**
- **Horizons in Molecular Pathology Series**
- **And More!**

*Select online educational offerings are complimentary for AMP members!*

**EDUCATE.AMP.ORG**

THURSDAY

**"AMP** is the best organization for anyone who wants to stay on the **cutting edge** of the future of molecular pathology."

— **Matthew Hiemenz, MD**

Molecular Pathologist  
Assistant Director of Clinical Genomics, Center for Personalized Medicine,  
Children's Hospital Los Angeles

## Your Donation Makes A Difference

To help fund special initiatives, AMP relies on donations from people like you. Amounts from \$5 to \$5,000+ have been received and have served to...

### Help Trainees...

- Travel to the Annual Meeting from outside the U.S.
- Connect with Mentors
- Discover the value of AMP membership
- Attend the AMP Social Event & Trainee Networking events

...by contributing to the  
Jeffrey A. Kant - AMP Education Fund

### Help AMP Volunteers...

- Develop standards, guidelines, and white papers
  - Collaborate with related organizations
  - Expand international education initiatives
- Bring selected technologists to the Annual Meeting

...by contributing to the  
AMP Strategic Initiatives Fund

### Help Colleagues...

- Get started in the field
- Advance their careers
- Explore the continuum of molecular diagnostics
- Share their knowledge with others

...by contributing to the  
General Education Fund

Plan your gift to an AMP giving fund today by visiting:  
**[www.amp.org/Funds/](http://www.amp.org/Funds/)**

# Thursday, November 16, 2017

7:00am - 8:00am

## Continental Breakfast

**Location:** Early Bird Session Room Foyers

7:00am - 8:00am

## Early Bird Sessions

### Standardization of Projects in Pharmacogenetics

**Location:** Room 250, Upper Concourse

**CE Credit:** 1 Hour

**Path:** General Molecular Technologies, Informatics

#### AMP CYP2C19 PGx Variant Standardization Project

*Victoria M. Pratt, PhD, Indiana University, Indianapolis, IN, USA*

#### PGx Standardization Project

*Steven A. Schichman, MD, PhD, Central Arkansas Veterans Healthcare System, Little Rock, AR, USA*

**Session Description:** This session will be an overview of laboratory and clinical initiatives in implementing pharmacogenetics. For laboratories, The AMP Pharmacogenetics Workgroup is developing a series of gene-specific minimum standard recommendations for a “must-test” variant list. The session will describe the criteria used for evaluation of the “must-test” variants. For clinical implementation of pharmacogenetics in the Veterans Administration (VA), this session will describe the rationale for determining the “must-test” gene-drug pairs in the VA system.

#### Session Objectives:

- Characterize the criteria used to determine the Tier 1 “must-test” variants for pharmacogenetic genotyping.
- Discriminate between the Tier 1 and Tier 2 recommendations for the “must-test” variants for pharmacogenetics genotyping.
- Summarize the process used to determine what gene-drug pairs should be tested in the VA population.

### The Utah Genome Project

**Location:** Room 255BC, Second Level

**CE Credit:** 1 Hour

**Path:** Informatics, Inherited Conditions

#### Utah Genome Project: Genetic Discovery Powered by Utah’s Large Families and Population Database

*Deborah Neklason, PhD, University of Utah, Salt Lake City, UT, USA*

**Session Description:** The Utah Genome Project (UGP) is a University of Utah strategic initiative to unravel the genetic basis of human disease through genomic sequencing of Utah families to discover, understand, prevent, and treat challenging medical conditions. UGP builds upon a rich history of genetic discovery enabled by the Utah Population database, a resource of 24 million records representing 8 million individuals and links family genealogies with medical records. UGP is enabled by the affordable technologies for sequencing and management of large data sets. The goals of UGP are to build infrastructure and best practice standards, discover novel disease-causing genes and develop precision diagnostics and therapies based on genomic variation.

#### Session Objectives:

- Discuss the scope of the data content, data linkage, and data access in the Utah Population database.
- Cite an example where genetic discovery leads to disease prevention in a family of thousands of descendants.
- Describe bioinformatic approaches being applied to genomic discovery in families.

### Molecular Diagnostics for Biomarker-Driven Clinical Trials

**Location:** Room 251, Upper Concourse

**CE Credit:** 1 Hour

**Path:** Oncology/Cancer, Informatics

#### The Challenges of Development and Application of the NCI-MATCH NGS Assay

*P. Mickey Williams, PhD, National Cancer Institute, Frederick, MD, USA*

#### Pediatric Clinical Trial Networks, Pathologist’s Perspective

*Marian H. Harris, MD, PhD, Boston Children’s Hospital, Boston, MA, USA*

**Session Description:** NCI-MATCH is a precision medicine cancer treatment clinical trial seeking to determine whether treating cancer based on specific genetic changes found in the patient's tumor is an effective strategy. Genetic changes are identified through targeted sequencing of cancer DNA using standardized methods. When the genetic changes identified in a patient's tumors "match" one of the treatments in the trial, the patient may receive that treatment provided they meet other eligibility criteria. The pediatric cancer population poses unique challenges for biomarker-driven therapy trials. Pediatric tumors are rare and have fewer genetic alterations than most adult tumors. Patient access to targeted therapies may also be limited. Multi-institutional protocol designs incorporating comprehensive tumor sequencing technologies are feasible and may help to overcome the challenges of clinical investigation in this population. This session will discuss the design and outcomes of a large multi-institutional study (iCAT) identifying actionable tumor alterations in pediatric patients.

**Session Objectives:**

- Describe the process used to identify, develop, and validate NGS assays for clinical trials.
- Illustrate the challenges during the development of the molecular guided clinical trials.
- Assess the current status of the NCI MATCH trial.
- Discuss how molecular profiling of pediatric tumors is feasible in the context of a multi-institutional studies.
- Cite data that indicate that actionable alterations are found in a substantial portion of patients.
- Analyze ways in which pediatrics can serve as a model for multi-institutional cooperation in other rare tumor types.

## Applications of Multiplex Molecular Imaging in Cancer

**Location:** Room 255EF, Second Level

**CE Credit:** 1 Hour

**Path:** Oncology/Cancer, General Molecular Technologies

### High Dimensional Imaging of Tumor Immune Infiltrates Using MIBI

*Michael Angelo, MD, PhD, Stanford University, Palo Alto, CA, USA*

**Session Description:** Assessment of protein expression on neoplastic cells and surrounding stroma is fundamental to the modern classification of tumors. In clinical practice, standard immunohistochemistry using chromogen-labeled antibodies permits visualization of only one to two antigen targets on each slide; immunofluorescence-

based approaches allow for simultaneous visualization of up to ten targets, but only with significant technical optimization efforts. Mass spectroscopy-based approaches, including mass spectroscopic immunohistochemistry and multiplexed ion beam imaging, in which metal chelator tags replace chromagens and fluorophores, permit simultaneous detection of 40 or more targets with subcellular resolution. This technology has a significant potential role in the advancement of our understanding of complex cellular relationships in human cancers, including tumor-immune cell interactions and intratumoral heterogeneity.

**Session Objectives:**

- Explain the limitations of current antibody-based diagnostics and imaging modalities.
- Describe evolving methodologies that permit high level multiplexing for molecular imaging in tissue sections.
- Identify applications for multiplex molecular imaging and its complementarity with genomics-based diagnostics.

## Case Studies in Infectious Diseases and Genetics

**Location:** Room 355BC, Third Level

**CE Credit:** 1 Hour

**Path:** Infectious Diseases, Inherited Conditions

### Hypertetraploid Partial Molar Pregnancy Identified by Microarray and STR Analysis, with Subsequent Choriocarcinoma Diagnosis

*Elizabeth Barrie, PhD, Nationwide Children's Hospital, Columbus, OH, USA*

### Research Whole Exome Sequencing Identifies a Novel SH2D1A Variant in a 51-Year-Old Patient with CNS Lymphocytic Vasculitis

*Patrick Blackburn, PhD, Mayo Clinic, Rochester, MN, USA*

### Acute Liver Failure Due to Echovirus 9 Associated with Persistent B Cell Depletion from Rituximab

*Alex Greninger, MD, PhD, University of Washington, Seattle, WA, USA*

### Pyrosequencing Solves the Case of the Conflicting Bacterial Isolates

*Damon R. Olson, MD, Baylor College of Medicine, Houston, TX, USA*

**Session Description:** Challenging Case Studies are presented by trainees or technologists. They will discuss the case's clinical history, molecular analysis, interesting features, and the proposed diagnosis. Other molecular testing methods, if applicable, will be included in the presentation, including

Thursday, November 16, 2017

biopsies, gross/microscopic pathology, immunohistochemistry/flow cytometry, and cytogenetic findings.

#### Session Objectives:

- Describe the context of a challenging clinical case.
- Discuss the molecular pathology techniques used in the diagnosis of the case.
- Propose a final diagnosis based upon findings and diagnostic evidence.

**8:00am - 8:15am**

Break

**8:15am - 8:30am**

Opening Remarks

**Location:** Ballroom, Lower Concourse

**CE Credit:** No CME/CMLE

**Path:** Opening Remarks

#### Opening Remarks

*Daniel Sabath, MD, PhD, University of Washington Medical Center, Seattle, WA, USA and 2017 Program Chair*

**8:30am - 9:45am**

Award Lecture

### Award for Excellence in Molecular Diagnostics: Presentation and Lecture

**Location:** Ballroom, Lower Concourse

**CE Credit:** 1.25 Hours

**Path:** Oncology/Cancer, General Molecular Technologies, Inherited Conditions

#### The Epigenetic Basis of Common Human Disease

*Andrew P. Feinberg, MD, MPH, Johns Hopkins University School of Medicine, Whiting School of Engineering, and Bloomberg School of Public Health, Baltimore, MD, USA*

**Session Description:** Introduction to epigenetics and its relevance to common human disease.

#### Session Objectives:

- Define epigenetics.
- Discuss the role of epigenetics in common human disease.
- Explain how epigenetics can be combined with genetics for precision medicine.

**9:45am - 10:15am**

Break

**Location:** Ballroom Foyer, Lower Concourse

**10:15am - 11:45am**

Plenary Session

### Molecular Genetics and Biomarkers of B-cell Leukemias and Lymphomas

**Location:** Ballroom, Lower Concourse

**CE Credit:** 1.50 Hours

**Path:** Oncology/Cancer

#### Precursor B-cell Neoplasms (ALL)

*Charles G. Mullighan, MBBS (Hons), MSc, MD, St. Jude Children's Research Hospital, Memphis, TN, USA*

#### Genetic and Epigenetic Drivers of Diffuse Large B-cell Lymphoma

*Laura Pasqualucci, MD, Columbia University Medical Center, New York, NY, USA*

**Session Description:** The second presentation will provide an overview of recent advances in the understanding of the molecular pathogenesis of diffuse large B-cell lymphoma, the most common mature B-cell malignancy. The speaker will illustrate the most common genes/programs targeted by genetic lesions in this disease, with emphasis on epigenetic modifiers; discuss the role of these genes in normal and malignant B-cells; and highlight how these molecular insights have unveiled novel therapeutic opportunities.

#### Session Objectives:

- Define the most common structural alterations associated with major DLBCL subtypes and their prognostic significance.
- Explain how these lesions may favor malignant transformation.
- Identify ways to utilize this information for diagnostic and therapeutic purposes.

Thursday, November 16, 2017

11:45am - 1:00pm

Lunch

## General Lunch, Exhibit Hall, Exhibit Level

(entrance through Exhibit Hall)

**Networking Lunches:** Please see lunch descriptions in the "Highlights & General Information" section of the Program Book, Page 17.

### AMP Central Activities:

*Meet & Greet: Publications & Communication Committee*

*Meet & Greet: Nominating Committee*

*Test Directory assistance and demonstrations*

1:00pm - 2:30pm

Workshop Sessions

## MRD Assessment in Acute Leukemias

**Location:** Room 355BC, Third Level

**CE Credit:** 1.50 Hours

**Path:** Oncology/Cancer, Informatics

### A Clinical Trial to Improve Risk Assessment in Acute Myeloid Leukemia that Uses Enhanced Exome Sequencing to Detect Leukemia Clearance Following Therapy

*David H. Spencer, MD, PhD, Washington University School of Medicine, St. Louis, MO, USA*

### Next-generation Sequencing for Detecting MRD in Acute Lymphoblastic Leukemia

*David Wu, MD, PhD, University of Washington, Seattle, WA, USA*

**Session Description:** Current approaches for determining risk of relapse in acute myeloid leukemia (AML) patients are imperfect, especially for patients lacking cytogenetic markers that are associated with established risk categories. Recent genomic studies suggest that monitoring of patient-specific somatic mutations has prognostic benefit, and could therefore be used to identify patients who would benefit from intensified therapy. To test this hypothesis, we are performing a prospective clinical trial using a validated a custom exome sequencing assay to stratify intermediate risk AML patients into treatment groups. In this presentation, I will describe the validation of this test, and our experience applying it to patients enrolled in this study over the past year. This talk/session will also review the opportunities and challenges for detecting minimal residual disease (MRD) by next-generation sequencing of IGH and T-cell receptor genes in acute lymphoblastic leukemias.

### Session Objectives:

- Discuss the current evidence for molecular testing of AML patients following induction chemotherapy for risk stratification.
- Summarize the use of 'enhanced exome' sequencing as a technical strategy for detecting and tracking patient-specific somatic mutations in tumor samples.
- Discuss the advantages and limitations of tumor/normal sequencing compared to tumor-only sequencing for disease monitoring.
- Describe the opportunity for assessing MRD by next-generation sequencing in ALL.
- Analyze potential challenges and strategies.
- Discuss the recent literature in this area.

## Discovering the Links: Infectious Agents and Cancer

**Location:** Room 251, Upper Concourse

**CE Credit:** 1.50 Hours

**Path:** Oncology/Cancer, Infectious Diseases

### HPV and Head and Neck Cancer

*Joseph A. Califano, MD, University of California, San Diego, CA, USA*

### Blood-based Assessment of EBV DNA as a Tumor Marker

*Jennifer A. Kanakry, MD, National Cancer Institute, National Institutes of Health, Bethesda, MD, USA*

**Session Description:** Prior infection with a virus or bacteria can set the stage for development of malignancy. In this session the links between two viruses, human papilloma virus (HPV) and Epstein Barr virus (EBV), and the development of cancer will be explored. The role of molecular testing in the diagnosis and monitoring of disease will be discussed.

### Session Objectives:

- Review the epidemiology of viral infections and the development of malignancy.
- Discuss the risks and available treatment for HPV and EBV related cancers.
- Explore the types of testing and their role in the diagnosis and monitoring of affected patients.

Thursday, November 16, 2017

## Pharmacogenomics Implementation

**Location:** Room 255BC, Second Level

**CE Credit:** 1.50 Hours

**Path:** Informatics, Inherited Conditions

### Clinical Implementation of Pharmacogenomics: From Reactive Testing to Preemptive Testing

*Ann M. Moyer, MD, PhD, Mayo Clinic, Rochester, MN, USA*

### Implementing and Assessing Outcomes with Genotype-Guided Therapy

*Larisa H. Cavallari, PharmD, University of Florida, College of Pharmacy, Gainesville, FL, USA*

**Session Description:** This session will describe examples of genotype-guided drug therapy in clinical practice and efforts to build evidence with pharmacogenomic implementation. These presentations will highlight the various approaches to implementation of pharmacogenomics testing, namely reactive and preemptive testing.

#### Session Objectives:

- Describe challenges faced by providers in ordering and interpreting pharmacogenomic test results.
- Discuss how variability among pharmacogenomic tests/reports among laboratories impacts clinical practice.
- Describe efforts to examine outcomes with pharmacogenomic implementation.

## Bioinformatic Frontiers: Dissecting the Genetics of Cancer

**Location:** Room 250, Upper Concourse

**CE Credit:** 1.50 Hours

**Path:** Oncology/Cancer, Informatics

### Computational Dissection of Intra-tumor Genetic Heterogeneity and Applications to the Study of Cancer Treatment, Evolution, and Metastasis

*Scott L. Carter, PhD, Dana-Farber Cancer Institute, Boston, MA, USA*

### Strategies and Challenges for Somatic Mutation Detection by Next-gen Sequencing

*Daniel C. Koboldt, MSc, Institute for Genomic Medicine at Nationwide Children's Hospital, Columbus, OH, USA*

**Session Description:** An array of computational approaches can be used to identify somatic variants from massively parallel sequencing data from tumors with or without a paired normal tissue. However, there are significant challenges to achieving clinically appropriate balance between sensitivity and specificity

of the called variants, particularly insertion/deletions and structural variants. In addition, tumor purity, ploidy and subclonal evolution further complicate the assessment of the identified variants. Using bioinformatics methods to approximate the tumor phylogeny, investigators can infer driver alterations, observe clonal evolutionary divergence, and dissect the underpinnings of tumor relapse. Computational approaches to understanding the strategies with somatic variant detection (VarScan) and novel methods to assess tumoral heterogeneity, such as ABSOLUTE, will be discussed.

#### Session Objectives:

- Discuss bioinformatics methods to optimize somatic variant detection.
- Examine computational methods to infer tumor purity and intratumoral heterogeneity.

## Genetics of Spinal Muscular Atrophy and Amyotrophic Lateral Sclerosis: A Timely Review

**Location:** Room 255EF, Second Level

**CE Credit:** 1.50 Hours

**Path:** Inherited Conditions

### Perspectives and Diagnostic Considerations in Spinal Muscular Atrophy

*Thomas W. Prior, PhD, Ohio State University, Columbus, OH, USA*

### Genetics of ALS

*Vivianna M. Van Deerlin, MD, PhD, University of Pennsylvania, Perelman School of Medicine, Philadelphia, PA, USA*

**Session Description:** Spinal Muscular Atrophy (SMA) and Amyotrophic Lateral Sclerosis (ALS) are devastating degenerative diseases of motor neurons. SMA is primarily a disease of infants and children and is the most common genetic cause of infant death. ALS is a disease of adults and is now recognized as part of a spectrum of disease phenotypes.

#### Session Objectives:

- Describe the genetic causes of SMA and ALS and related conditions.
- Recognize the approaches and complexities associated with molecular diagnostic testing for SMA and ALS.
- Discuss the ongoing efforts to apply genetic information to genotype/phenotype correlations and the implications for precision medicine approaches.

Thursday, November 16, 2017

2:30pm - 4:15pm

Break

### Coffee Break - Visit Exhibit Hall, AMP Central and Posters

*(Award Applicant Posters Attended)*

**Location:** Exhibit Hall, Lower Concourse

#### AMP Central Activities:

*Career Networking Mixer – Technologists*

*Meet & Greet: Subdivision Leadership*

4:15pm - 5:45pm

Plenary Session

### The Hunt for Microbes: The Beginning of the End of the Pandemic Era

**Location:** Ballroom, Lower Concourse

**CE Credit:** 1.50 Hours

**Path:** Infectious Diseases

#### Microbial Anthropology

*Maria G. Dominguez-Bello, PhD, BSc, MSc, New York University School of Medicine, New York, NY, USA*

#### A Collaborative Effort to End the Pandemic Era: The Global Virome Project

*Jonna Mazet, DVM, MPVM, PhD, One Health Institute, University of California, Davis, CA, USA*

**Session Description:** The ability to understand the world through the use of molecular tools has led to fascinating discoveries. In this session, the concept of microbial anthropology will be examined, exploring the human microbiome in peoples with different levels of integration to Western lifestyles in the Amazon region and Southern Africa. The Global Virome project is a ten-year project to pre-empt emerging pandemic threats by identifying the majority of unknown viruses throughout the world that are likely to infect humans.

#### Session Objectives:

- Describe the technologies used to make pathogen discovery possible.
- Explore the differences in microbiota of different groups of humans and the impact of Western lifestyles on the makeup of the human microbiome.
- Review efforts to combat the emergence and re-emergence of high impact viral epidemics and pandemics compromising global health security and well-being of the peoples of the world.

5:45pm - 7:00pm

Welcome Reception

### Welcome Reception

*(Supported by Roche)*

**Location:** Exhibit Hall, Lower Concourse

**CE Credit:** Not CME/CMLE

**Path:** Reception

**Session Description:** Please join us for the Welcome Reception and help to kick-off another successful Annual Meeting while networking with your friends and colleagues in the Exhibit Hall. This event is open to all Registered Meeting Attendees. Supported by Roche.

#### AMP Central Activities:

*Tweet up! Meet the other #AMPlifiers you have gotten to know online as you prepared for AMP 2017!*

# AMP Advocates

FOR YOU, YOUR PRACTICE & THE PATIENTS YOU SERVE

The **AMP ADVOCACY PROGRAM** endeavors to inform and influence public policy affecting molecular pathology. AMP communicates regularly with federal agencies and members of Congress regarding professional and reimbursement issues and continues to confront numerous regulatory and reimbursement forces adversely affecting molecular diagnostic testing including:

- **Oversight of Laboratory Developed Procedures (LDPs)**
- **Coverage and Reimbursement of Molecular Procedures**
- **Implementation of the new Medicare Clinical Diagnostic Laboratory Test Payment System (PAMA)**
- **Regulatory Oversight of NGS Diagnostic Tests**
- **Limitations of Rx-Dx Pairs in Companion Diagnostics**

[WWW.AMP.ORG/ADVOCATES](http://WWW.AMP.ORG/ADVOCATES)

"As a Molecular Pathologist, I am responsible for performing high quality and accurate testing for my patients. Legislators have comparable obligations to their constituents. So, I feel obliged to advocate for my patients, and my specialty. It's my duty and privilege to educate officials on the critical role of molecular diagnostics in health care, and to ensure **AMP Advocacy** continues to be impactful."

**Shelby D. Melton, MD**

VA North Texas Health Care System

# Friday, November 17, 2017

**7:00am - 8:00am**

## Continental Breakfast

**Location:** Early Bird Session Room Foyers

**7:00am - 8:00am**

## Early Bird Sessions

### Novel Technologies: Cool Toys for You Now and in the Future

**Location:** Room 250, Upper Concourse

**CE Credit:** 1 Hour

**Path:** General Molecular Technologies, Infectious Diseases

#### Gene Expression Profiling During Infection Using Digital Barcoded Probe Technology

Wenjie Xu, PhD, NanoString Technologies, Inc., Seattle, WA, USA

#### Implementation of a Diagnostic Device Syndromic Disease Network

Lindsay Meyers, BSc, BioFire Diagnostics, LLC, Salt Lake City, UT, USA

#### Introduction to Smarticles™ Technology: Potential Applications in Antimicrobial Stewardship

Michael A. Lewinski, PhD, Roche Molecular Systems, Inc., Pleasanton, CA, USA

**Session Description:** Three novel next generation technologies for use as tools for pathogen detection and characterization will be described and preliminary performance data will be presented.

#### Session Objectives:

- Describe important operational features of the three platforms.
- Identify potential clinical utility.
- Explain key performance characteristics.

### Data Visualization

**Location:** Room 251, Upper Concourse

**CE Credit:** 1 Hour

**Path:** Informatics

#### Enabling Scientific Discovery Through Interactive Visual Data Analysis

Alexander Lex, PhD, University of Utah, Salt Lake City, UT, USA

**Session Description:** The molecular lab is ground zero for the growing volume and complexity of biomedical data. Interactive visual data analysis methods can leverage both the power of computation and the unique abilities of humans to interpret large and complex data sets. This session will briefly introduce basic visualization concepts and then describe recent efforts from the University of Utah Visualization Design Lab to facilitate data-driven discovery and communication.

#### Session Objectives:

- Describe basic visualization concepts and guidelines for good visualization design.
- Discuss two data visualization challenges in the molecular laboratory.

### New Tools for Detecting Low Frequency Variants Applications in Hematopoietic Neoplasms

**Location:** Room 255BC, Second Level

**CE Credit:** 1 Hour

**Path:** Informatics

#### Single Molecule Quantification of Rare DNA and RNA Variants in Heterogeneous Samples

Todd E. Druley, MD, PhD, Washington University School of Medicine, St. Louis, MO, USA

**Session Description:** The ability to precisely quantify rare DNA and RNA variants from next-generation sequencing (NGS) is limited due to the relatively high error rate (0.005-0.01) of NGS platforms. In contrast, flow cytometry for residual leukemia following therapy has proven predictive for therapeutic escalation and outcomes at levels as low as 0.0001. Flow cytometry, however, can only provide a binary positive or negative result. To improve the limit of detection of NGS to match that of flow cytometry as well as to provide gene-specific information that may inform precision therapies, we developed error-corrected sequencing (ECS) for DNA or RNA using unique molecular indexing (UMIs). We are sensitive to point mutations, indels, fusions and aberrant splice forms as rare as 0.0001. Using ECS on serial pre-leukemic DNA, we have identified signatures of point mutations as rare as 0.0002 that are predictive of AML up to 15 years in advance.

Friday, November 17, 2017

### Session Objectives:

- Illustrate how UMIs overcome the errors introduced by NGS.
- Describe how different alignment strategies are necessary to identify different types of variants (e.g. point mutations vs internal tandem duplications).
- Assess how to apply ECS for individualized cancer prediction or surveillance after therapy.

### Coding (and Other) Conundrums

(Sponsored by the Economic Affairs Committee)

**Location:** Room 255EF, Second Level

**CE Credit:** 1 Hour

**Path:** Advocacy/Lab Management

#### Panel Discussion

Aaron D. Bossler, MD, PhD, University of Iowa,  
Iowa City, IA, USA  
(EAC Vice-Chair New Codes Subcommittee)

Richard D. Press, MD, PhD, Oregon Health &  
Sciences University, Portland, OR, USA  
(EAC Vice-Chair Coverage Subcommittee)

Anthony N. Sireci, MD, Columbia University  
Medical Center, New York, NY, USA  
(EAC Vice-Chair Pricing Subcommittee)

**Session Description:** In today's healthcare landscape, clinical laboratories face a milieu of coding, coverage, and reimbursement challenges for molecular diagnostic procedures. To assist with deciphering laboratory economic issues, the Economic Affairs Committee invites you an early morning discussion where EAC leaders will provide answers to selected questions, answer questions submitted by AMP members prior to the meeting, and provide ample time for discussion with the session attendees.

### Session Objectives:

- Examine and clarify selected coding, coverage, and reimbursement conundrums.
- Identify useful resources for laboratories navigating these issues.
- Assess key gaps in understanding of knowledge for EAC to address in future AMP educational programs.

### Case Studies in Solid Tumors

**Location:** Room 355BC, Third Level

**CE Credit:** 1 Hour

**Path:** Oncology/Cancer

#### A Case of MSI-high Colorectal Cancer Responsive to Checkpoint Blockade Immunotherapy after Progression to Metastatic Disease

Maryam Shirazi, MD, Columbia University  
Medical Center, New York, NY, USA

#### RBM10-TFE3: A Potential Diagnostic Pitfall Due to Cryptic Intrachromosomal Xp11.2 Inversion Resulting in False-negative TFE3 FISH Renal Cell Carcinoma

Deepu Alex, MD, PhD, Memorial Sloan Kettering  
Cancer Center, New York, NY, USA

#### Not So Ancillary: A Case of Correction of Primary Diagnosis with Molecular Studies

Adam Wilberger, MD, University of Colorado  
Hospital, Aurora, CO, USA

#### Mutation Signature as a Diagnostic Clue in Lung Carcinoma

Navin Mahadevan, MD, PhD, Brigham and  
Women's Hospital, Boston, MA, USA

**Session Description:** Challenging Case Studies are presented by trainees or technologists. They will discuss the case's clinical history, molecular analysis, interesting features, and the proposed diagnosis. Other molecular testing methods, if applicable, will be included in the presentation, including biopsies, gross/microscopic pathology, immunohistochemistry/flow cytometry, and cytogenetic findings.

### Session Objectives:

- Describe the context of a challenging clinical case.
- Discuss the molecular pathology techniques used in the diagnosis of the case.
- Propose a final diagnosis based upon findings and diagnostic evidence.

8:00am - 8:15am

Break

Friday, November 17, 2017

8:00am - 9:00am

ID Special Session

## Molecular Infectious Disease Testing: Point of Care Challenges

**Location:** Marriott, Deer Valley Room, Main Floor

**CE Credit:** 1 Hour

**Path:** Infectious Diseases

### Molecular Point-of-Care Tests for Infectious Diseases: Opportunities and Challenges

*Frederick S. Nolte, PhD, Medical University of South Carolina, Charleston, SC, USA*

**Session Description:** Point-of-care-tests (POCTs) provide rapid actionable results at the time and site of patient encounter. Traditionally, lateral flow immunoassays have been used for this purpose. Recently, emerging molecular methods have been developed to meet the needs for speed, low cost, and ease of use of POCTs for a wide variety of infectious diseases.

#### Session Objectives:

- Describe current and emerging technologies for molecular infectious disease testing at the point of care.
- Explain the major drivers for development of these tests in resource limited and rich countries.
- Discuss the unique challenges associated with deployment of molecular tests in near patient settings.

8:15am - 9:45am

Plenary Session

## Molecular Informatics at Scale for Genomics-based Personalized Cancer Care

**Location:** Ballroom, Lower Concourse

**CE Credit:** 1.50 Hours

**Path:** Informatics

### Molecular Pathology Informatics – Toolsets and Infrastructures for Supporting Clinical Trials

*Mark Routbort, MD, PhD, University of Texas MD Anderson Cancer Center, Houston, TX, USA*

### Interpreting the Cancer Genome: Identifying Driver Alterations and Therapeutic Options

*Nikolaus Schultz, PhD, Memorial Sloan Kettering Cancer Center, New York, NY, USA*

**Session Description:** The fields of Cancer Genomics and Molecular Pathology are each complex and rapidly changing, and their intersection makes our practice challenging. Supporting clinical care and clinical research in an efficient manner requires an infrastructure to provide access to relevant information and an array of tools to prioritize and present this information in a form that helps advances team goals. This plenary session will describe informatics approaches that support the Precision Oncology goals of cancer genomic variant effect interpretation based on prior knowledge and statistical recurrence, and on the support of clinical trial activity.

#### Session Objectives:

- Discuss two informatics challenges in Precision Oncology.
- Discuss an infrastructure element that addresses one challenge.
- Discuss an analytical tool that addresses one challenge.

9:45am - 10:45am

Break

## Coffee Break – Visit Exhibit Hall, AMP Central and Posters

**Location:** Exhibit Hall, Lower Concourse

### AMP Central Activities:

*Meet & Greet: Economic Affairs Committee*

*Meet & Greet: Professional Relations Committee*

10:45am - 11:45am

Workshop Sessions

## Platform Presentations of Selected Genetics Abstracts

**Location:** Room 255BC, Second Level

**CE Credit:** 1 Hour

**Path:** Inherited Conditions

### G24 – Discovery of Unique Disease- and Gene-specific Peripheral Blood DNA Methylation Signatures Allows Molecular Diagnosis and VUS Classification in Hereditary Genetic Syndromes

*Bekim Sadikovic, PhD, London Health Sciences Centre, Western University, Ontario, Canada*

### G44 – Runs of Homozygosity (ROH) Reveal that Segmental-UPD Occurs as a Result of Recombination Mediated Repair of Genomic Imbalance

*Andrea L. Penton, PhD, University of North Carolina at Chapel Hill, Chapel Hill, NC, USA*

Friday, November 17, 2017

**G30 – Improved Screening for Cancer Predisposition Mutations in Patients with Advanced Solid Tumors Enabled by Tumor-normal Sequencing**

*Diana Mandelker, MD, PhD, Memorial Sloan Kettering Cancer Center, New York, NY, USA*

**G28 – Short Tandem Repeat Analysis Reveals a High Rate of Partial Hydatidiform Moles in Triploid Conceptions Identified by Prenatal Chromosome Microarray**

*Xuemei Wu, MD, PhD, Oregon Health & Science University, Portland, OR, USA*

**Session Description:** Platform presentations of selected Genetics abstracts.

**Session Objectives:**

- Analyze platform presentations of abstracts highlighted by the Genetics Subdivision leadership as particularly significant.
- Evaluate the scientific merit and significance of these selected studies through further discussion with the authors.

**Platform Presentations of Selected Hematopathology Abstracts**

**Location:** Room 251, Upper Concourse

**CE Credit:** 1 Hour

**Path:** Oncology/Cancer

**H28 – Haplotype Counting for Sensitive AML Relapse Detection**

*Marija Debeljak, BSc, Johns Hopkins University, Baltimore, MD, USA*

**H60 – Comparison of Clinical Digital Karyotyping by Comprehensive Next Generation Sequencing with Standard Cytogenetic Analysis in Pediatric Leukemia**

*Elizabeth M. Azzato, MD, PhD, MPH, St. Jude Children's Research Hospital, Memphis, TN, USA*

**H68 – Diagnostic Yield of Somatic Mutation Detection in Hematologic Malignancies Does Not Increase with Additional Mutation Analysis, and Supports More Focused Disease-specific Testing Models**

*Szabolcs Szeling, PhD, University of California, Los Angeles, CA, USA*

**H34 – Implementation Considerations: Designing and Medically Vetting a Targeted Gene Panel for Hematologic Malignancies**

*Michelle Grant, DO, University of Vermont Medical Center, Burlington, VT, USA*

**Session Description:** Platform presentations of selected Hematopathology abstracts.

**Session Objectives:**

- Analyze platform presentations of abstracts highlighted by the Hematopathology Subdivision leadership as particularly significant.
- Evaluate the scientific merit and significance of these selected studies through further discussion with the authors.

**Platform Presentations of Selected Infectious Diseases Abstracts**

**Location:** Room 355BC, Third Level

**CE Credit:** 1 Hour

**Path:** Infectious Diseases

**ID74 – Detection of Resistance-Associated Substitutions in the Hepatitis C Viral Genome using the Sentosa SQ Hepatitis C Virus Genotyping Next-Generation Sequencing Assay**

*Jonas Pettersson, PhD, University of Southern California, Los Angeles, CA, USA*

**ID02 – Pathogen Detection by Metagenomic Next Generation Sequencing of Purulent Body Fluids**

*Wei Gu, MD, PhD, University of California, San Francisco, CA, USA*

**ID34 – Challenges Associated with Developing Rapid Molecular Diagnostics for Detection of Antibiotic Resistance**

*Megan Stonebraker, BSc, Diatherix Laboratories, Huntsville, AL, USA*

**ID60 – Extreme One-Step RT-PCR: Potential for Point-of-Care Viral Detection**

*Jessica A. Houskeeper, University of Utah, Salt Lake City, UT, USA*

**Session Description:** Platform presentations of selected Infectious Diseases abstracts.

**Session Objectives:**

- Analyze platform presentations of abstracts highlighted by the Infectious Diseases Subdivision leadership as particularly significant.
- Evaluate the scientific merit and significance of these selected studies through further discussion with the authors.

**Platform Presentations of Selected Informatics Abstracts**

**Location:** Room 255EF, Second Level

**CE Credit:** 1 Hour

**Path:** Informatics

**I06 – A New Allele-centric VCF File for Variants in ClinVar**

*Melissa J. Landrum, PhD, National Center for Biotechnology, National Library of Medicine, National Institutes of Health, Bethesda, MD, USA*

Friday, November 17, 2017

**I16 – Homopolymer Compression Improves Reference-Free, Kmer Based Whole Genome Strain Comparison for IonTorrent Data**

*Keith E. Simmon, PhD, ARUP Laboratories, Salt Lake City, UT, USA*

**I20 – Redesigning the Molecular Pathology Clinical Report for the Next-generation Genomic Era: The MSKCC Experience with the MSK-IMPACT Assay**

*Aijazuddin Syed, MSc, Memorial Sloan Kettering Cancer Center, New York, NY, USA*

**I28 – An Interlaboratory Assessment of Complex Variant Detection Using Multiplexed Positive Controls**

*Stephen Lincoln, Invitae, San Francisco, CA, USA*

**Session Description:** Platform presentations of selected Informatics abstracts.

**Session Objectives:**

- Analyze platform presentations of abstracts highlighted by the Informatics Subdivision leadership as particularly significant.
- Evaluate the scientific merit and significance of these selected studies through further discussion with the authors.

**Platform Presentations of Selected Solid Tumors Abstracts**

**Location:** Room 250, Upper Concourse

**CE Credit:** 1 Hour

**Path:** Oncology/Cancer

**ST52 – Clinical Cancer Whole Exome and Transcriptome Sequencing of Pediatric Tumors at Columbia University Medical Center: Laboratory Perspective at Three Years**

*Susan J. Hsiao, MD, PhD, Columbia University Medical Center, New York City, NY, USA*

**ST56 – Clinical Utility of Large Scale Genomic Sequencing of Solid Tumors at a Large Academic Medical Center**

*Noah A. Brown, MD, University of Michigan, Ann Arbor, MI, USA*

**ST114 – Identification of Germline Variants in Tumor Genomic Sequencing Assays: Usefulness of Variant Allele Fraction and Population Variant Databases**

*Nathan D. Montgomery, MD, PhD, University of North Carolina, Chapel Hill, NC, USA*

**ST62 – Integrated Molecular Diagnostic Call Criteria for MET Exon 14 Skipping in Lung Cancer**

*Ryan J. Schmidt, MD, PhD, Harvard Medical School, Boston, MA, USA*

**Session Description:** Platform presentations of selected Solid Tumors abstracts.

**Session Objectives:**

- Analyze presentations of abstracts highlighted by the Solid Tumors Subdivision leadership as particularly significant.
- Evaluate the scientific merit and significance of these selected studies through further discussion with the authors.

**11:45am - 1:00pm**

Lunch

**General Lunch, Exhibit Hall, Exhibit Level**

(entrance through Exhibit Hall)

**Networking Lunches:** Please see lunch descriptions in the “Highlights & General Information” section of the Program Book, Page 17.

**AMP Central Activities:**

*Career Networking Mixer – Trainee/ Early Career Meet & Greet: Training & Education Committee Meet & Greet: Awards Committee*

**1:00pm - 2:30pm**

Plenary Session

**High Impact Molecular Diagnostics for Cancer and Inherited Diseases**

**Location:** Ballroom, Lower Concourse

**CE Credit:** 1.50 Hours

**Path:** Oncology/Cancer, Inherited Conditions

**Solid Tumor Genotyping: Technical and Clinical Validation with a Focus on Fusions**

*A. John Iafrate, MD, PhD, Massachusetts General Hospital, Boston, MA, USA*

**Intersection of Germline and Somatic Cancer Variants and New Areas of Clinical Utility**

*Colin C. Pritchard, MD, PhD, University of Washington, Seattle, WA, USA*

**Session Description:** The first presentation will discuss the work done in the lab of Dr. Iafrate that focuses on bringing new genetic technologies to cancer diagnostics and the application of these in clinical molecular diagnostic testing. The work has led to the development of a novel next generation sequencing technique termed “Anchored Multiplex PCR (AMP)” that is especially powerful at the detection of gene fusion events from clinical specimens. We have shown that AMP is as sensitive as FISH in diagnosing ALK, ROS1 and RET fusions in lung cancer, and does not require knowing both fusion partners. In addition, AMP can be used for genomic DNA target enrichment and is scalable and cost effective. Current work focuses on ultrasensitive detection of mutations in blood and urine.

Friday, November 17, 2017

Genomic sequencing technologies have enabled increasing use of cancer genetic testing for both germline cancer predisposition and somatic mutation profiling in tumors. The second presentation will review the interplay between germline and somatic findings in cancer genetic testing, with particular emphasis on new areas of clinical utility. These new areas include germline testing of cancer predisposition genes to guide cancer treatment decisions, tumor DNA sequencing to rule out Lynch syndrome, and tumor DNA sequencing used to inform germline variant classification.

#### Session Objectives:

- Describe sequencing strategies to identify gene fusions in cancer.
- Discuss key elements required for the validation of gene fusions detected.
- Discuss the clinical utility of NGS-based detection of gene fusions in clinical practice.
- Review when and how testing for inherited mutations in BRCA1, BRCA2, and other homologous recombination DNA repair genes is used to guide cancer treatment.
- Describe the clinical scenario and utility of tumor sequencing of mismatch DNA repair genes as part of a Lynch syndrome workup.
- List at least two types of tumor findings that increase the probability that a germline variant in a cancer predisposition gene is pathogenic.

#### ID Special Session

### Unmet Needs in Infectious Disease Diagnostics

**Location:** Marriott, Deer Valley, Main Floor

**CE Credit:** 1.50 Hours

**Path:** Infectious Diseases

#### Panel Discussion

*Gregory A. Storch, MD, Washington University School of Medicine, St. Louis, MO, USA*

*Kimberly Hanson, MD, MHS, University of Utah, Salt Lake City, UT, USA*

**Session Description:** Molecular diagnostics have significantly advanced the practice clinical Infectious Diseases (ID), but many challenges remain. This session is a panel discussion focused on the unmet diagnostic needs in ID and will evaluate a variety of different patient settings.

#### Session Objectives:

- Highlight common clinical scenarios where available diagnostics fall short.
- Review selected outcomes studies and comment on future diagnostic priorities.
- Assess the current regulatory environment and discuss barriers to new test development.

2:30pm - 3:30pm

Break

### Coffee Break – Visit Exhibit Hall, AMP Central and Posters

*(Even-numbered posters attended)*

**Location:** Exhibit Hall, Lower Concourse

#### AMP Central Activities:

*Career Networking Mixer – Mid-Career*

*Meet & Greet: Membership Affairs Committee*

3:30pm - 5:00pm

Symposium Sessions

### Genome Evolution and Therapy Resistance in Lymphoid and Myeloid Neoplasms

**Location:** Room 155, First Level

**CE Credit:** 1.50 Hours

**Path:** Oncology/Cancer

#### Correlation of AML and MDS Mutation Burdens and Response to Decitabine in the Peripheral Blood and Bone Marrow

*John S. Welch, MD, PhD, Washington University School of Medicine, St. Louis, MO, USA*

#### Dynamic Monitoring of Lymphoma Genome Evolution

*Ash A. Alizadeh, MD, PhD, Stanford University School of Medicine, Stanford, CA, USA*

**Session Description:** Modern molecular technologies have provided unprecedented insight into the clonal architecture and evolution of neoplastic processes. Detection of mutations relevant to these processes have emerging clinical applications for detection of disease and response to therapy. The speakers will present their work in studying genomic complexity and evolution in myeloid and lymphoid neoplasms with an emphasis on the biology, technologies, and emerging clinical applications.

Friday, November 17, 2017

**Session Objectives:**

- Discuss the concept of genome evolution in cancer.
- List which technologies are utilized to monitor genome evolution in hematopoietic cancers.
- Identify emerging clinical applications to detecting genomic changes in myeloid and lymphoid neoplasms such as detection of disease and monitoring response to therapy.

**Molecular Testing in the Practice of Cardiology**

**Location:** Ballroom, Lower Concourse

**CE Credit:** 1.50 Hours

**Path:** Inherited Conditions

**Phenotype to Genotype: How Traditional Techniques Pave the Way to Targeted Testing and Individualized Medicine**

*Joseph J. Maleszewski, MD, Mayo Clinic, Rochester, MN, USA*

**From Genes to Genomes: Evolution of Molecular Testing for Inherited Cardiomyopathies**

*Birgit Funke, PhD, Veritas Genetics, Danvers, MA, USA, Harvard Medical School, Boston, MA, USA*

**Session Description:** Genetic testing for inherited cardiomyopathies has evolved significantly over the last decade. This session will describe the genotypic and phenotypic aspects of cardiomyopathies, including how specific features of the disease can narrow the genetic differential diagnosis. The availability of large sequencing panels for focused diagnostic panels and predictive screening tests, the side effect of variants of uncertain significance, and the need for standardization of variant interpretation will be highlighted.

**Session Objectives:**

- Examine the basic pathological and genetic aspects of cardiomyopathies.
- Recognize the impact of clinical and genetic heterogeneity on genetic tests.
- Assess the pros and cons of disease focused gene panels versus whole exome sequencing.

**4:15pm - 5:00pm**

ID Special Session

**ID Town Hall Meeting**

**Location:** Marriott, Deer Valley Room, Main Floor

**CE Credit:** 0.75 Hour

**Path:** Infectious Diseases

**Session Description:** The AMP Infectious Diseases Subdivision and multiple AMP volunteers have spearheaded substantial contributions to the field of molecular diagnostics. As we continue to look to the future, AMP leadership would like to invite ID subdivision members and meeting attendees with an interest in ID to attend an open format town hall session. This session is a follow up to discussions initiated at the ID town hall session held during the AMP 2016 Annual Meeting. Please bring your ideas, energy, and enthusiasm to the conversation as we discuss new initiatives and the future of infectious disease molecular diagnostics within AMP.

**Session Objectives:**

- Discuss recent actions to engage the Infectious Diseases subdivision, including 2017 Annual Meeting changes.
- Discuss emerging trends in molecular ID testing and impacts to AMP members.
- Provide AMP ID leadership feedback on ID subdivision membership needs.

**5:00pm - 5:15pm**

Break

Friday, November 17, 2017

5:15pm - 6:30pm

Business Session

### Business & Awards Session

**Location:** Room 251, Upper Concourse

**CE Credit:** 0.75 Hour

**Path:** Special Session

**Session Description:** This session open to all meeting attendees provides both AMP members and those interested in molecular pathology an overview of the projects and accomplishments of the many AMP committees and working groups. The work of AMP committees have a significant impact on molecular pathology, including practice guidelines, molecular curricula for residents and technologists, and policy advocacy. The session opens with a very brief business meeting and closes with the presentation of awards, including the Technologist, Young Investigator, and Jeffrey A. Kant Leadership Awards.

#### Session Objectives:

- Identify the relationship between selected projects of the Clinical Practice Committee and their own clinical practice.
- List the regulatory and reimbursement policies in the midst of discussion or implementation that impact molecular pathology.
- Summarize the contributions of the Leadership Award recipient to advance the field of molecular pathology.

7:00pm - 10:30pm

Social Event

### AMP 2017 Social Event

*(Separate Registration)*

**Location:** Marriott, Grand Ballroom A-F, Main Floor

The AMP Social Event is intended to facilitate networking opportunities between trainees, new, and long-standing AMP attendees. There will be mingling, dancing, amateur acts and great food! Attendees who purchased tickets when registering for the meeting will receive their ticket when they check-in at the registration desk for their name badge. If any tickets are still available for sale, they may be purchased at the Registration Desk.

# Innovate

SATURDAY

WITH PRACTICE GUIDELINES & SPECIAL REPORTS

AMP's body of scholarly work includes **EVIDENCE-BASED** guidelines, special reports, white papers, best practices and other published papers. Recent reports include:

- AMP/ASCO/CAP Interpretation and Reporting of Sequence Variants in Cancer
- AMP/CAP Guidelines for NGS Validation of Oncology Panels
- ASCP/CAP/AMP/ASCO Molecular Markers for Colorectal Cancer
- Spectrum of Clinical Utilities in Molecular Pathology Testing Procedures
- NGS for Infectious Disease Diagnosis and Management
- Emerging ID Applications for MALDI TOF MS
- Clinical Utility of Circulating Tumor Cells, Exosomes and Circulating Nucleic Acids

[WWW.AMP.ORG/INNOVATES](http://WWW.AMP.ORG/INNOVATES)

"I rely on AMP to **research**, **document**, and **deliver** the standards on which many of our molecular processes are based. AMP's reports and guidelines help us to define our internal best practices."

— **Kojo S. J. Elenitoba-Johnson, MD**

Director, Center for Personalized Diagnostics, University of Pennsylvania

# Saturday, November 18, 2017

7:00am - 8:00am

## Continental Breakfast

**Location:** Early Bird Session Room Foyers

*(Supported by Myriad Genetics Laboratories, Inc.)*

7:00am - 8:00am

## Early Bird Sessions

### Biorepositories in Precision Medicine

**Location:** Room 255BC, Second Level

**CE Credit:** 1 Hour

**Path:** General Molecular Technologies

#### The Role of Biobanks in Precision Medicine Research and Care

*Nazneen Aziz, PhD, Kaiser Permanente Research Bank, Oakland, CA, USA*

#### The "All of Us" Research Program- Precision Medicine Initiative: 1 Million Cohort

*Mine S. Cicek, PhD, Mayo Clinic, Rochester, MN, USA*

**Session Description:** Biobanks are a critical resource to advance precision medicine research and medical knowledge to improve health. Large biorepositories are being created across the country by healthcare organizations to provide specimens and associated health information from large numbers of consented participants. The speakers in this session will discuss the components of their respective institutions' biorepositories, including patient recruitment, infrastructure, data security, access to the collection, and future vision.

#### Session Objectives:

- Describe the infrastructure required for biospecimen collection, processing, storage, management, and distribution.
- Describe policies and procedures to recruit patients and ensure data security.
- Discuss approaches used by biobanks to facilitate innovative research to improve health and healthcare.

### AMP Bioinformatics Pipeline Validation Working

*(Sponsored by the Clinical Practice Committee)*

**Location:** Room 251, Upper Concourse

**CE Credit:** 1 Hour

**Path:** Informatics

#### AMP Bioinformatics Pipeline Validation Working Group: Development of Guidelines

*Somak Roy, MD, University of Pittsburgh Medical Center, Pittsburgh, PA, USA*

#### New AMP Guidelines on Validating Next Generation Sequencing Bioinformatics Pipelines

*Alexis B. Carter, MD, Children's Healthcare of Atlanta, Atlanta, GA, USA*

**Session Description:** Recognizing the challenges in developing, validating, and implementing NGS bioinformatics pipelines, AMP has convened a multistakeholder working group with representatives from the College of American Pathologists and the American Medical Informatics Association to develop a best practices guideline for validation of these pipelines. This session will discuss the development of the consensus guideline document and implementation of the recommendations during validation of a clinical NGS bioinformatics pipeline.

#### Session Objectives:

- Discuss the AMP-led guideline initiative regarding validation of NGS bioinformatics pipelines.
- Discuss NGS data analysis pipeline implementation.
- Develop validation plans according to recommendations.
- Describe methods for variant identification optimization and accuracy.
- Implement methods to continue improvement and quality control of the NGS pipeline.

Saturday, November 18, 2017

## Molecular Pathology of Pancreatic Neoplasms

**Location:** Room 250, Upper Concourse  
**CE Credit:** 1 Hour  
**Path:** Oncology/Cancer

### Molecular Diagnostic Testing for the Detection of Early Pancreatobiliary Neoplasms

*Aatur Singhi, MD, PhD, University of Pittsburgh Medical Center Presbyterian, Pittsburgh, PA, USA*

**Session Description:** Malignant neoplasms of the pancreatobiliary tract represent the third leading cause of cancer deaths in the United States. Despite aggressive combined modality treatment approaches, the 5-year survival rate of these cancers is a dismal 8%. Currently, surgical resection offers the only possibility for a cure, but pancreatobiliary malignancies are often diagnosed at an advanced stage, and, therefore, early detection is imperative. This session will discuss past and current methods as well as emerging clinical molecular diagnostic testing to improve the screening and diagnosis of pancreatobiliary neoplasms.

#### Session Objectives:

- Review the genetic basis of pancreatobiliary neoplasms.
- Discuss the development of currently available molecular tests to assess the pancreatobiliary tract.
- Summarize information on emerging molecular technologies with the potential to improve the early detection of pancreatobiliary cancers.

## Platform Presentations of Selected Technical Topics Abstracts

**Location:** Room 255EF, Second Level  
**CE Credit:** 1 Hour  
**Path:** General Molecular Technologies

### TT92 – Successful Extraction of RNA from Archived Bone Marrow Aspirate Smears for Use in Targeted RNA Sequencing

*Tamara Restrepo, BSc, Boston Children's Hospital, Boston, MA, USA*

### TT82 – High Performance Detection of Cancer Mutations from Circulating DNA Using Single Color Digital PCR

*Christina Wood-Bouwens, Stanford School of Medicine, Stanford, CA, USA*

### TT24 - Screening Circulating Nucleic Acids of Pancreatic Ductal Adenocarcinoma Using a Plasmonic Nanosensor

*Amogha Tadimety, Dartmouth College, Hanover, NH, USA*

### TT76 - Engineering of Isogenic Cell Lines Using the CRISPR/Cas9 Technology and Precise Characterization of Low Allelic Frequency FFPE Cell Line Blocks for Use as Molecular Reference Standards

*Andrew Hilmer, PhD, Applied Stem Cell, Milpitas, CA, USA*

**Session Description:** Platform presentations of selected Technical Topics abstracts.

#### Session Objectives:

- Analyze platform presentations of abstracts highlighted by the Technical Topics leadership as particularly significant.
- Evaluate the scientific merit and significance of these selected studies through further discussion with the authors.

## Case Studies in Hemepath and Informatics

**Location:** Room 355BC, Third Level  
**CE Credit:** 1 Hour  
**Path:** Oncology/Cancer, Informatics

### Inv(16) Incidentally Detected by Leukemia Translocation Panel Screen in a Patient with Therapy-related Acute Myeloid Leukemia

*Andres E. Quesada, MD, The University of Texas M.D. Anderson Cancer Center, Houston, TX, USA*

### A Confounding Case of Polycythemia Vera

*Aaron Atkinson, PhD, Dartmouth-Hitchcock Medical Center, Lebanon, NH, USA*

### Identifying Patients at Risk for Myelodysplastic Syndrome through Next Generation Sequencing of Cytopenias with Equivocal or Absent Morphologic Dysplasia

*Patrick Mann, MD, Washington University, St. Louis, MO, USA*

### Detection of the Controversial ASXL1 c.1934dupG (p.G646Wfs\*12) Insertion Variant From Targeted Next-generation Sequencing (NGS) Data

*Michael Alberti, MD, PhD, Washington University, St. Louis, MO, USA*

**Session Description:** Challenging Case Studies are presented by trainees or technologists. They will discuss the case's clinical history, molecular analysis, interesting features, and the proposed diagnosis. Other molecular testing methods, if applicable, will be included in the presentation, including biopsies, gross/microscopic pathology, immunohistochemistry/flow cytometry, and cytogenetic findings.

Saturday, November 18, 2017

**Session Objectives:**

- Describe the context of a challenging clinical case.
- Discuss the molecular pathology techniques used in the diagnosis of the case.
- Propose a final diagnosis based upon findings and diagnostic evidence.

**8:00am - 8:15am**

Break

**8:00am - 9:00am**

ID Special Session

**Technologist Round Table:  
Troubleshooting in Molecular  
ID Lab**

**Location:** Marriott, Deer Valley Room, Main Floor  
**CE Credit:** 1 Hour  
**Path:** Infectious Diseases

**Passing the Baton: Keys to Successful  
Implementation of Laboratory Developed  
Tests (LDTs) and FDA-cleared Tests**

*Melissa R. Johnson, BSc, ARUP Laboratories, Salt Lake City, UT, USA*

*Jeff Stevenson, PhD, ARUP Laboratories, Salt Lake City, UT, USA*

*Jeffrey Chumley, MSc, MLS(ASCP)CM, ARUP Laboratories, Salt Lake City, UT, USA*

**Session Description:** Laboratory developed tests that perform well in an R&D environment may not function optimally in the clinical laboratory. Early collaboration between R&D and the clinical laboratory can identify and prevent issues that may not otherwise appear until after transition has occurred. This session will present general validation methods and our troubleshooting experience with implementing new tests.

**Session Objectives:**

- Explain R&D processes for validation of LDTs and verification of FDA-cleared tests.
- Identify additional resources and requirements of the clinical laboratory that may fall outside the scope of R&D.
- Describe tools and documentation practices that help identify potential issues early in the validation process.

**8:15am - 9:45am**

Plenary Session

**Mitochondrial Disease: Diagnosis,  
Treatment and Prevention**

**Location:** Ballroom, Lower Concourse  
**CE Credit:** 1.50 Hour  
**Path:** Inherited Conditions

**Overview of Mitochondrial Disease and  
Nuclear Genetic Causes**

*Marni J. Falk, MD, Children's Hospital of Philadelphia, Philadelphia, PA, USA and University of Pennsylvania, Perelman School of Medicine, Philadelphia, PA, USA*

**Mitochondrial DNA Disease: Etiology,  
Diagnosis, and Prevention**

*Sir Doug Turnbull, MBBS, MD, PhD, Newcastle University, Newcastle, UK*

**Session Description:** In this session, we will provide an overview of genetic-based mitochondrial disease. This will include a discussion of the dual-genome etiology, substantial clinical heterogeneity across all ages, and emerging therapeutic options. Recent genomic sequencing technologies have greatly enabled diagnostic success for these more than 300 distinct genetic diseases. We will also provide a state-of-the-art update on prevention of mitochondrial DNA diseases using new in vitro fertilization techniques.

**Session Objectives:**

- Recognize that mitochondrial diseases are collectively common genetic conditions due to either nuclear or mtDNA mutations.
- Acknowledge that the diagnosis of mitochondrial disease can be challenging due to marked clinical and genetic heterogeneity.
- Discuss how NGS diagnostic techniques have transformed the diagnosis.
- Recognize that current treatment of mitochondrial disease is largely symptomatic, but new therapies are emerging and IVF technologies allow potential to prevent disease transmission.

Saturday, November 18, 2017

9:45am - 10:45am

Break

### Coffee Break - Visit Exhibit Hall, AMP Central and Posters

(Odd-numbered posters attended)

**Location:** Exhibit Hall, Lower Concourse

#### AMP Central Activities:

Meet & Greet: Clinical Practice Committee

10:45am - 12:15pm

Workshop Sessions

### Whole Exome Sequencing in Clinical Practice

**Location:** Room 250, Upper Concourse

**CE Credit:** 1.50 Hour

**Path:** Oncology/Cancer

#### Development and Validation of a Whole-exome Sequencing Test for Simultaneous Detection of Point Mutations, Indels and Copy-number Alterations for Precision Cancer Care

Oliver Elemento, PhD, Institute for Precision Medicine, Weill Cornell Medicine, New York, NY, USA

#### Integrated Genomic Profiling Using Clinical Whole Genome and Transcriptome Sequencing to Enable Precision Oncology

Vaidehi Jobanputra, PhD, New York Genome Center, New York, NY, USA

**Session Description:** Exome Cancer Test v1.0 (EXaCT-1) is the first New York State-Department of Health-approved whole-exome sequencing (WES)-based test for precision cancer care. EXaCT-1 uses HaloPlex (Agilent) target enrichment followed by next-generation sequencing (Illumina) of tumor and matched constitutional control DNA. A detailed clinical development and validation pipeline suitable for simultaneous detection of somatic point/indel mutations and copy-number alterations (CNAs) will be described, along with the computational framework for data analysis, reporting, and sign-out. EXaCT-1 was validated with 57 tumors covering five distinct clinically relevant mutations. Results demonstrated elevated and uniform coverage compatible with clinical testing and complete concordance in variant quality metrics between formalin-fixed paraffin embedded and fresh-frozen tumors. Extensive sensitivity studies identified limit of detection thresholds for point/indel mutations and CNAs. Prospective analysis of 337 cancer cases revealed mutations in clinically relevant genes in 82% of tumors demonstrating that EXaCT-1 is an accurate and sensitive method for identifying actionable mutations, with reasonable costs and time, greatly expanding its utility for advanced cancer care. The current utilization and benefits of large scale NGS clinical assays will be addressed.

#### Session Objectives:

- Describe the process that was used to develop and validate a large scale NGS assay for clinical testing.
- Illustrate the challenges faced during the development and implementation of a whole-exome/whole-genome sequencing test.
- Assess the current utilization and benefits of large scale NGS clinical assays.
- Describe the assay validation of the Whole Genome and Transcriptome Sequencing.
- Discuss variant identification and concordance with orthogonal sequencing panels.
- Describe how WGTS data and precision medicine can assist treating oncologists.

### Crowd-sourcing the Expert Curation of Germline and Somatic Variants: CIViC, ClinGen and ClinVar

**Location:** Room 255EF, Second Level

**CE Credit:** 1.50 Hour

**Path:** Informatics

#### ClinGen and ClinVar: Building Resources to Support Gene and Variant Interpretation

Heidi L. Rehm, PhD, Harvard Medical School, Boston, MA, USA

#### CIViC: A Curation Portal and Knowledgebase for Cancer Variant Interpretation

Obi L. Griffith, PhD, Washington University School of Medicine, St. Louis, MO, USA

**Session Description:** The clinical interpretation of human genomic variation, in either the germline or somatic context, relies in part on the accumulated scientific knowledge about genes and the variants present in the clinical specimen. Community resources for the curation of this knowledge and the evolution of a dynamic consensus interpretation will be presented in this session.

#### Session Objectives:

- Describe the resources that exist to support the interpretation of germline and somatic variation.
- Discuss which medical contexts are appropriate and which are inappropriate for "crowd-sourcing" strategies.
- Summarize ways to employ and prioritize limited expert review capabilities.
- Describe the paradox of a "consensus opinion" about a rapidly changing subject.

Saturday, November 18, 2017

## Molecular Detection of Resistance: Ready for Prime Time?

**Location:** Room 251, Upper Concourse

**CE Credit:** 1.50 Hour

**Path:** Infectious Diseases

### Bacterial Resistance: Detection with Molecular Methods

*Robert A. Bonomo, MD, Louis Stokes VA Medical Center, Cleveland, OH, USA*

### Deep Sequencing for HIV-1 Clinical Management

*Maria Casadellà, PhD, IrsiCaixa AIDS Research Institute, Barcelona, Spain*

**Session Description:** Phenotypic testing has been the cornerstone of assessing the resistance of bacterial and to a lesser extent viral isolates. With the advent of molecular testing for detection of pathogens, this session will explore the current opportunities and challenges of using molecular methods to look at the resistance mechanisms from a genotypic standpoint. The ability of these tests to impact therapy and clinical outcomes will be explored.

#### Session Objectives:

- List resistance mechanisms used by bacteria and the molecular bases of their detection.
- Discuss the methodology and clinical utility of HIV Deep Sequencing and how it impacts patient care.
- Discuss the future of molecular detection of resistance for routine clinical testing.

## Review and Implementation of New AMP Guidelines on NGS Somatic Variant Test Validation, Interpretation, and Reporting

*(Sponsored by the Clinical Practice Committee)*

**Location:** Room 255BC, Second Level

**CE Credit:** 1.50 Hour

**Path:** Oncology/Cancer

### AMP/CAP Guidelines for Validation of Next-Generation Sequencing–Based Oncology Panels

*Lawrence J. Jennings, MD, PhD, Ann & Robert H. Lurie Children's Hospital of Chicago, Chicago, IL, USA*

### AMP/ASCO/CAP Standards and Guidelines of Somatic Variant Interpretation and Reporting

*Marilyn M. Li, MD, University of Pennsylvania Perelman School of Medicine, Philadelphia, PA, USA*

### Implementation of NGS Somatic Variant Guidelines into Clinical Practice

*Marina N. Nikiforova, MD, University of Pittsburgh Medical Center, Pittsburgh, PA, USA*

**Session Description:** In 2017, AMP partnered with various stakeholders to develop and publish two related published guideline manuscripts in The Journal for Molecular Diagnostics: 1) Standards and Guidelines for the Interpretation and Reporting of Sequence Variants in Cancer: A Joint Consensus Recommendation of the Association for Molecular Pathology, American Society of Clinical Oncology, and College of American Pathologists and 2) Guidelines for Validation of Next Generation Sequencing (NGS)-based Oncology Panels: A Joint Consensus Recommendation of the Association for Molecular Pathology and College of American Pathologists. This session will be a discussion of how the guidelines were developed and will provide practical case-based implementation advice for laboratories both currently performing somatic NGS and those considering bringing these technologies into their laboratories.

#### Session Objectives:

- Evaluate current guidelines regarding the validation of NGS-based oncology panels.
- Recognize the advantages of an error-based approach to test validation.
- Evaluate current status of interpretation and reporting of sequence variants in cancer and recognize the urgent needs of standardization.
- Discuss AMP-led guidelines developed to address the validation of NGS-based oncology panels and the classification, interpretation, and reporting of somatic sequence variants.
- Describe different levels of evidence used for variant classification.
- Discuss the AMP/ASCO/CAP tier-based reporting system centered on clinical and experimental evidence, the nomenclature of sequence variants and essential components of reports for cancer sequencing tests.

**What is the Legal Risk for Interpreting and Classifying Sequencing Variants in the Laboratory?**

*(Sponsored by the Professional Relations Committee)*

**Location:** Room 355BC, Third Level  
**CE Credit:** 1.50 Hour  
**Path:** Advocacy/Lab Management

**Panel Discussion**

*John D. Pfeifer, MD, PhD, Washington University School of Medicine, St. Louis, MO, USA*

*Robert M. Cook-Deegan, Arizona State University, Washington, DC, USA*

*Wayne W. Grody, MD, PhD, UCLA School of Medicine, Los Angeles, CA, USA*

*Jamie McDonald, MSc, University of Utah, Salt Lake City, UT, USA*

*Elaine Lyon, PhD, ARUP Laboratories, Salt Lake City, UT, USA*

**Session Description:** We are in an era where patients have easy access to their entire medical record, including laboratory data and results. Therefore, patients are empowered to educate themselves on their health status, and are proactively engaging in their care plans. Communicating how sequencing variants are classified, interpreted and reported is now just as important to the patients as it is to the ordering provider. This session will explore some of the questions, challenges, and risks associated with variant sequence classification that are affecting laboratories, molecular professionals, and patients. As more people are tested and technologies evolve to better detect genetic variants, the possible risk to laboratories of misclassification have been raised by the recent Williams v. Quest/Athena lawsuit. The discussion will cover a broad spectrum of viewpoints; including experts in germline and somatic sequencing, as well as a patient and legal perspective.

**Session Objectives:**

- Examine what constitutes as misclassification of a variant.
- Examine what constitutes negligence in the reporting of variants.
- Examine what is the responsibility for investigating germline mutations in somatic testing.
- Evaluate current practices for re-classification of variants.

**12:15pm - 1:30pm**

Lunch

**General Lunch, Exhibit Hall, Exhibit Level**

(entrance through Exhibit Hall)

**Networking Lunches:** Please see lunch descriptions in the "Highlights & General Information" section of the Program Book, Page 17.

**AMP Central Activities:**

*Meet & Greet: International Affairs Committee*

**1:30pm - 3:00pm**

Symposium Sessions

**C. difficile Testing: Pros and Cons of Testing Algorithms**

**Location:** Room 250, Upper Concourse  
**CE Credit:** 1.50 Hour  
**Path:** Infectious Diseases

**Diagnosis of Clostridium difficile Infections- The Benefits of Molecular Testing**

*Ferric C. Fang, MD, University of Washington, School of Medicine, Seattle, WA, USA*

**Diagnosis of Clostridium difficile Infections- Why Toxin Tests Still Matter**

*Christopher R. Polage, MD, MAS, University of California, Davis School of Medicine, Sacramento, CA, USA*

**Session Description:** Clostridium difficile is associated with a range of clinical presentations ranging from asymptomatic carriage to diarrhea and life-threatening pseudomembranous colitis. The diagnosis of C. difficile infections has become controversial, with some advocating nucleic acid amplification tests to optimize sensitivity and others advocating toxin immunoassays to prevent overdiagnosis. The speakers will present both sides of this ongoing debate.

**Session Objectives:**

- Describe the pathogenesis and epidemiology of Clostridium difficile.
- Review diagnostic methods used to diagnose C. difficile infections.
- Discuss the pros and cons of different testing algorithms.

Saturday, November 18, 2017

## Emerging Technology for Structural Variant Detection

**Location:** Room 155, First Level

**CE Credit:** 1.50 Hour

**Path:** General Molecular Technologies, Inherited Conditions

### Mate-Pair Sequencing in Cytogenetics

*Nicole L. Hoppman, PhD, Mayo Clinic, Rochester, MN, USA*

### Digital Karyotyping and Complex Rearrangement Analysis with Sequencing at Single Molecule Resolution

*Hanlee P. Ji, MD, Stanford University School of Medicine, Stanford, CA, USA*

**Session Description:** Chromosome rearrangements occur in a variety of clinical situations; for example, in patients with abnormal features such as intellectual disability or malformations, and they can also occur somatically in a wide variety of cancers. Traditional cytogenetic methods such as G-banded karyotyping have been used for several decades to detect chromosomal rearrangements. However, this technique cannot identify what genes are at/near the breakpoints and, therefore, often cannot determine pathogenicity of these rearrangements. Novel next-generation sequencing methodologies, such as mate pair sequencing and digital karyotyping, are now available and can characterize almost any chromosome rearrangement. In a neoplastic setting, these methodologies may aid in identifying the diagnosis, prognosis, and therapeutic options for the patient.

#### Session Objectives:

- Compare the methodologies for carrying out mate-pair and barcode-linked sequencing used for the identification and characterization of germline and somatic structural rearrangements.
- Differentiate the types of next generation sequencing used to elucidate structural rearrangements.
- Propose clinical scenarios for which these techniques can be useful.

3:00pm - 3:15pm

Break

3:15pm - 4:45pm

Plenary Session

## Role of Genome Editing in Research and Therapy

**Location:** Room 155, First Level

**CE Credit:** 1.50 Hour

**Path:** General Molecular Technologies, Inherited Conditions, Oncology/Cancer

### Genome Editing with CRISPR-Cas Nucleases

*J. Keith Joung, MD, PhD, Massachusetts General Hospital, Charlestown, MA, USA*

### Accelerating Prediction of Tumor Vulnerabilities Using Next-generation Cancer Models

*Jesse S. Boehm, PhD, Broad Institute, Cambridge, MA, USA*

**Session Description:** In an era of routine high throughput medical and tumor exome sequencing, putative drivers may be readily identified but functional annotation is often lacking and ultimately the genetic underpinnings of many diseases left uncertain. Forward genetic screens evaluate a large number of genomic targets for their relevance to a specific phenotype and recent technological advances permit total gene knockdown that can be applied across many thousands of genes. Sequence-specific programmable nucleases such as CRISPR-Cas9 enable targeted modification of the DNA itself; CRISPR technologies employed with guide RNA libraries can permit genome-scale screening to identify novel mechanisms of phenotypic abnormalities in constitutional and somatic contexts. Directed applications, including in-patient derived cell models, allow for exploration of mechanisms of drug resistance and identification of novel functional elements in the noncoding genome and epigenome.

#### Session Objectives:

- Explore the activities and specificities of CRISPR nucleases and the implications for clinical applications.
- Describe how CRISPR screens can identify novel regulatory sites in the genome and epigenome relevant to cancer evolution and chemotherapy resistance.
- Identify applications of genome editing in human cancers using patient-derived cell models for exploration of signaling networks and novel therapeutic targets.

Saturday, November 18, 2017

4:45pm - 5:00pm

### Closing Remarks

**Location:** Room 155, First Level

**CE Credit:** No CME/CMLE

**Path:** Closing Remarks

#### Closing Remarks

*Daniel Sabbath, MD, PhD, University of Washington Medical Center, Seattle, WA, USA and 2017 Program Chair*

*Lynne V. Abruzzo, MD, PhD, Ohio State University Medical Center, Columbus, OH, USA and 2018 Program Chair*

Molecular Pathology Association of India  
Sociedade Brasileira de Patologia Clínica/Medicina Laboratorial

An AMP International Affiliate is a non-U.S. based organization focused on molecular pathology or diagnostics that wishes to establish a formal relationship with AMP. In turn, AMP supports molecular diagnostic professionals around the world through its Affiliates.

### International Conference Grants

AMP members who are on organizing committees of conferences outside of North America are invited to apply for AMP co-sponsorship of the event and support for speaker travel.

### International Membership Grants

Thanks to generous donations to the AMP Strategic Initiatives Fund, each year non-U.S. laboratory professionals who would not otherwise have access to AMP services and activities due to limited financial resources in the applicant's local environment may apply to receive one year of AMP membership at no charge. Depending on fund availability, selected recipients may be invited to apply for a second year grant.

### AMP International Events

#### **AMP 2018 EUROPE**

*Achieving Dramatic Insights Into  
Molecular Oncology & Precision Medicine*  
Rotterdam, The Netherlands  
April 30 - May 2, 2018

#### **AMP 2019 GLOBAL CONGRESS**

Location TBD  
April/May 2019

# Speaker Bios

## A

**Michael Alberti, MD, PhD**, is a fellow in the ABP Physician-Scientist Research Pathway at Washington University in St. Louis. He received his MD and PhD from the University of Alabama at Birmingham (UAB), completing his thesis work in the laboratory of David T. Curiel, MD, PhD studying adenovirus gene therapy targeting approaches in addition to cellular therapy applications. He completed residency training in Clinical Pathology at UCLA, where he was the recipient of an Eli and Edythe Broad Center of Regenerative Medicine and Stem Cell Research at UCLA Clinical Fellowship Award to investigate the role of long noncoding RNAs in early B-cell development in the laboratory of Dinesh S. Rao, MD, PhD. He then moved to Washington University in St. Louis to complete Molecular Genetic Pathology Fellowship training and has subsequently began his postdoctoral research in the laboratory of Matthew J. Walter, MD. His research is focused on studying the molecular regulation of normal and dysregulated hematopoiesis in the context of myelodysplastic syndrome (MDS) and development of secondary acute myeloid leukemia (s-AML).

**Deepu Alex, MD, PhD**, is a board certified Molecular Genetic Pathologist and currently a Cytopathology fellow at Memorial Sloan Kettering Cancer Center in New York. Prior to this, he has completed fellowships in Molecular Genetic Pathology and Oncologic Surgical Pathology at the same institution. He completed his Pathology residency training from Medstar-Georgetown University Hospital, Washington DC in 2015. He received his Ph.D. training in Microbiology and Immunology at Georgetown University. His thesis work dealt with drug discovery and new treatment strategies for invasive fungal infections. In 2008, he was awarded the Gertrude Maegwyn Davies Scholarship for best graduate research. In 2010, he was appointed one of 15 international advisors for The Lancet Student, a subsidiary of the Lancet journal. His areas of academic and research interest include advances in molecular testing in solid tumors and cytopathology. He has authored case reports, research publications and book chapters with an emphasis on molecular diagnostic methods. He has served as Chief Resident for his residency program and has represented his program as a delegate to international professional societies in Pathology.

**Ash A. Alizadeh, MD, PhD**, completed his PhD in Biophysics and MD at Stanford in 2003, under mentorship of Pat Brown (Stanford Biochemistry) and Lou Staudt (NCI/NIH). Supported by the Howard Hughes Medical Institute (HHMI) and NIH Medical Scientist Training Program (MSTP), he built the Lymphochip DNA microarray platform. He and his colleagues used this platform to profile gene expression in diffuse large B cell lymphoma (DLBCL), and many other tumors. This work led to the discovery of DLBCL subtypes, and a framework for their cell of origin. Following his clinical subspecialty Hematology and Medical Oncology training at Stanford, he completed his postdoctoral studies with Ron Levy and Irv Weissman. During this time he worked on molecular outcome prediction in DLBCL, developing a statistical framework for identification of small numbers of genes for robust risk stratification and prognosis. Working with Irv Weissman, he identified CD47 expression as an adverse prognostic factor in non-Hodgkin lymphomas, and a therapeutic target of novel monoclonal antibodies that synergize to eradicate tumors. The Alizadeh lab studies genomic biomarkers of tumors, whether detected through biopsy of primary tissues, or non-invasively through monitoring blood using circulating tumor DNA (ctDNA). His group developed Cancer Personalized Profiling by deep Sequencing (CAPP-Seq) as a novel method for ctDNA detection, and developed a novel cell deconvolution framework (CIBERSORT). His group applies such genomic tools for early detection, diagnosis, and monitoring of diverse tumors. In this effort, his group builds and employ tools from functional genomics, computational biology, molecular genetics, and mouse models.

**Michael Angelo, MD, PhD**, is an assistant professor in the Department of Pathology. Mike received a BS in Physics from the University of Mississippi in 2002 and subsequently enrolled at Duke University, where he received an MD and PhD in Electrical and Computer Engineering in 2010. He trained in clinical pathology at UCSF and completed a postdoctoral research fellowship in the lab of Garry Nolan prior to starting his own lab at Stanford in 2014. He is board certified in clinical pathology and a recipient of the NIH Director's Early Independence Award. Mike's main research focus is creating and applying next generation instrumentation and methods for nanometer scale, multiplexed, quantitative imaging of genes and proteins in clinical tissue biopsies. To this end, his lab has recently developed new instrumentation for multiplexed ion beam imaging (MIBI), which uses secondary ion mass spectrometry to measure antibodies tagged with mass reporters. Highly multiplexed IHC panels for assessing immune cell populations in solid tissue are currently being used in the Angelo lab to study tumor-immune interactions and autoimmunity.

## Speaker Bios

**Aaron Atkinson, PhD**, is an Instructor in Clinical Genomics and Advanced Technologies at the Geisel School of Medicine at Dartmouth. He earned his bachelor's in Biology at the University of Utah, and doctorate from Dartmouth College in molecular evolution and protein engineering. His postdoctoral training was with both Dr. Dennis Winge at the University of Utah in the Hematology Division of Internal Medicine concentrating on mitochondrial disorders, and then Dr. Gregory Tsongalis where he began his clinical training in molecular diagnostics and clinical genomics.

**Nazneen Aziz, PhD**, is the Executive Director of the Kaiser Permanente Research Bank. Nazneen's interest and expertise is in the implementation of genomics in clinical practice. In her previous roles, Nazneen was the Senior Vice President and Chief Research Officer at Phoenix Children's Hospital (PCH) where she directed the strategic direction and growth of research at PCH. Before joining PCH, Nazneen was the Director of Molecular Medicine at the College of American Pathologists (CAP). During her tenure at CAP, she led the development of the first set of standards and proficiency tests for clinical laboratories using next-generation sequencing and non-invasive prenatal screening techniques. Nazneen has held executive leadership positions in the biotech/biopharma industry. In her industry career, she focused on personalized medicine, biomarkers, genetic tests, and development of drugs for cancer and diabetes. Prior to joining the biotechnology industry, Nazneen was an Assistant Professor at Harvard Medical School and Boston Children's Hospital where she discovered new genes and their role in polycystic kidney disease. Nazneen received her Ph.D. in molecular genetics and MS in biochemistry at the Massachusetts Institute of Technology (MIT) and her BA (Honors) in Biological Sciences from Wellesley College. She has several issued and pending patents. Her publications have been cited extensively in the medical and scientific literature and she has been invited to speak at numerous national and international conferences. She is on the National Academies Roundtable of Genomics and Precision Medicine, Genomics and Population Health Action Collaborative Population Screening Working Group, the US Government Accountability Office's expert panel on multiplex technologies for point of care and a member of IGNITE. Nazneen was named by the Arizona Republic as one of 15 People Worth Watching in 2015 and by the Arizona Business Magazine as 2014 Most Influential Women in Arizona Business. Nazneen holds a Research Professorship in the School of Life Sciences at Arizona State University and in the Department of Child Health at University of Arizona College of Medicine.

**Elizabeth M. Azzato, MD, PhD, MPH**, is an assistant member in the Department of Pathology at St. Jude Children's Research Hospital. She earned her medical degree through Duke University, her Master of Public Health through the University of North Carolina Chapel Hill and her Ph.D. through a joint partnership between the National Institutes of Health and Cambridge University (UK), where she studied genetic variation and cancer survival. She completed her clinical pathology residency and molecular genetic pathology fellowship training through the Hospital of the University of Pennsylvania and is board certified in Clinical Pathology and Molecular Genetic Pathology. She currently serves as Director of the Molecular Pathology and Clinical Genomics at St. Jude, which focuses on high complexity clinical pediatric oncologic testing, including comprehensive tumor whole-genome, whole-exome and transcriptome testing and cancer predisposition syndrome genetic testing. Her interests include the translation of new technologies and identification of new biomarkers for pediatric oncology testing, by developing and optimizing novel methodologies, protocols and informatics.

### B

**Elizabeth Barrie, PhD**, is an ABMGG Clinical Laboratory Fellow training in both Clinical Cytogenetics and Clinical Molecular Genetics. She received a BS in Biology from Case Western Reserve University in 2008. Supported by a Distinguished University Fellowship and a Delta Gamma Foundation Fellowship, she completed her PhD in Biomedical Science at the Ohio State University. She identified genetic polymorphisms in the DBH gene (dopamine beta-hydroxylase) demonstrating tissue-specific effects on mRNA and cardiovascular phenotypes. During her post-doctoral work at the OSU Center for Pharmacogenomics, Dr. Barrie analyzed candidate genes and cognitive phenotypes in the context of autism and Parkinson's disease. Currently at the Institute for Genomic Medicine (IGM) at Nationwide Children's Hospital, she is involved in analyzing clinical cases, teaching and research.

**Patrick Blackburn, PhD**, is a Clinical Laboratory Genetics and Genomics Fellow in the Department of Laboratory Medicine and Pathology at the Mayo Clinic. He received his Ph.D. in Clinical and Translational Sciences from the Mayo Graduate School in 2015. Dr. Blackburn's graduate work focused on developing new tools and strategies for genome engineering to speed rare disease

## Speaker Bios

research and to study the functional consequences of variants of unknown significance in families with suspected genetic disorders. He is particularly interested in using TALENs and CRISPR-Cas systems in model organisms and human cell lines to create patient specific models of disease. Dr. Blackburn was a postdoctoral fellow in the Mayo Clinic Center for Individualized Medicine and part of the Investigative and Functional Genomics Program within the clinical diagnostic odyssey service line. During his postdoctoral work, Dr. Blackburn was involved in whole exome sequencing analysis and the application of -omics profiling and advanced analytics in unsolved cases. In 2017, Dr. Blackburn became a Clinical Laboratory Genetics and Genomics Fellow and is receiving training in clinical molecular genetics and cytogenetics. He has interest in next generation sequencing technologies and their application in both the constitutional genetic and oncology settings.

**Jesse S. Boehm, PhD**, is an Institute Scientist at the Broad Institute and the Associate Director of the Broad's Cancer Program. He is the director of the institute's Cancer Cell Line Factory (CCLF) initiative, and a principal investigator in the Broad's Cancer Model Development Center (as part of the International Human Cancer Models Initiative). In these roles, he works closely with Cancer Program director Todd Golub in the scientific planning and strategic execution of program projects, collaborations, and activities, with particular focus on senior strategic leadership of the Broad's Dependency Map initiative, together with Golub and William Hahn. Boehm also leads a research laboratory focused on developing methods and tools to accelerate the translation of cancer genomics into cancer therapeutics. Active projects include developing pipelines for personalized testing of tumor vulnerabilities and assessing the tumorigenic potential and functional impact of new cancer mutations. The research group has an ultimate goal of making "precision functional genomics" a reality. Over the last decade, Boehm has helped create and deploy large-scale functional genomics tools for the community, aiming to determine the function of elements in the cancer genome. Boehm received his B.S. in biology from MIT and his Ph.D. from Harvard University, Division of Medical Sciences.

**Robert A. Bonomo, MD**, is the Professor of Medicine in the Molecular Biology and Microbiology department at Case Western Reserve University. He also serves as Chief of Medical Service at the Louis Stokes Cleveland Department of Veteran Affairs Medical Center and Vice Chair for Veteran Affairs, Department of Medicine, for the University Hospitals Cleveland Medical Center. Dr. Bonomo received his Medical Degree at Case Western Reserve University and continued on to complete his Residency and Fellowship at the University Hospitals of Cleveland. The primary focus of his laboratory is to understand the genetic and amino acid sequence determinants of the enzymes that inactivate  $\beta$ -lactams, the  $\beta$ -lactamases.

**Aaron D. Bossler, MD, PhD**, is a clinical professor in Pathology at the University of Iowa. He directs the molecular pathology laboratory and the molecular genetic pathology fellowship program with 12 years of experience in molecular genetic pathology. His research interest is in understanding the molecular mechanisms of cancer and using the genetic information to develop rational clinical assays. His laboratory has developed multiple next generation sequencing assays for cancer mutation profiling using the Ion Torrent and Illumina platforms and has considerable experience with optimizing specimen preparation for enhancing sensitivity for mutation detection from tissue or blood specimens. He has a longstanding research interest on the role of HPV infection in the development of squamous cell carcinoma. He currently serves as vice-chair for new codes on the AMP Economic Affairs Committee, as the AMP representative to the Pathology Coding Caucus (PCC), as a member of both AMP and College of American Pathologists Economic Affairs Committees, as a member of the American Medical Association Molecular Pathology Advisory Group (MPAG) and the Proprietary Laboratory Assay Technical Advisory Group (PLATAG). He is a member of the editorial board for The Journal of Molecular Diagnostics.

**Noah A. Brown, MD**, received a B.S. in Biological Sciences from Stanford University and an M.D. from the University of Michigan School of Medicine. He completed residency training in Anatomic and Clinical Pathology at the University of Michigan Health System. He also completed fellowship training in Hematopathology and in Molecular Genetic Pathology at the University of Michigan. He joined the faculty at the University of Michigan, Department of Pathology in 2014 as the Associate Medical Director. He is now an Assistant Professor of Pathology, Director of the University of Michigan Molecular Diagnostics Laboratory as well as Director of the Molecular Genetic Pathology Fellowship. His research interests include emerging molecular diagnostic technology and investigation of novel molecular alterations in hematolymphoid and head and neck neoplasms. He serves on editorial boards of Human Pathology and Head and Neck Pathology. Recent awards include the Association for Molecular Pathology Young Investigator Award.

### C

**Joseph A. Califano, MD**, is a board-certified otolaryngologist. He is an internationally recognized head and neck surgeon who specializes in tumors of the oral cavity (mouth), salivary glands, pharynx (throat), larynx (voice box), sinuses, thyroid, and skull base. Dr. Califano has expertise in minimally invasive surgical techniques, including endoscopic laser and robotic surgery, to help best preserve function and appearance in his patients. He has an interest in HPV-related cancers of the throat, as well as premalignant conditions of the upper aero digestive tract. His other areas of investigation include integrative network-based molecular analysis of head and neck tumors; detection of recurrent and occult primary cancer within blood and saliva using molecular biologic techniques; and defining the underlying biology of head and neck cancers. A frequent speaker at national and international meetings, Dr. Califano has coauthored numerous textbooks and book chapters and over 230 peer-reviewed articles related to both clinical and scientific aspects of cancer. His work has appeared in *Nature*, *Oral Oncology* and *Clinical Cancer Research*, among others. He reviews and serves on the editorial board for a variety of medical journals, including *Oral Oncology*, the most respected specialty journal in head and neck cancer. In his free time, Dr. Califano enjoys rock climbing, and is learning how to surf. He and his wife, Beth, have two children.

**Scott L. Carter, PhD**, is an Assistant Professor in the Department of Biostatistics and Computational Biology, Dana-Farber Cancer Institute at the Harvard Chan School of Public Health. He is also an Associate Member at the Broad Institute. He works closely with Boston area physicians to design and execute studies of cancer initiation, drug resistance, and metastasis using genomics technology applied to cancer-tissue specimens collected at various stages of disease progression. Dr. Carter has developed several novel computational methods in order to analyze these datasets and make inferences about clonal evolution underlying cancer progression. He has also developed software tools that are significantly increasing the impact of his work by making those methods available to the broader research community. These tools include HAPSEG, ABSOLUTE, CapSeg, Allelic CapSeg, and Phylogic.

**Alexis B. Carter, MD, FCAP, FASCP**, is the Director of Pathology Informatics for Children's Healthcare of Atlanta. She is the first chair of the new Informatics Subdivision in the Association of Molecular Pathology and also serves as a member of the AMP Governing Board, as the Test Directory Editor and as a member of the Publications Committee. She is a past-president of the Association of Pathology Informatics and is a member of the Informatics Committee and Clinical Informatics Steering Committee of the College of American Pathologists. She is the immediate past-chair of the International Pathology and Laboratory Medicine Special Interest Group (IPaLM SIG) of SNOMED CT International which is the governing body for SNOMED CT Terminology. She is the secretary for the working group on two-dimensional barcoding for the Clinical and Laboratory Standards Institute, is a section editor for informatics for Archives of Pathology and Laboratory Medicine and is on the editorial board of the Journal of Pathology Informatics. She is board-certified in Anatomic Pathology, Clinical Pathology, Molecular Genetic Pathology and Clinical Informatics, and her clinical practice is in both clinical informatics and molecular genetic pathology.

**Maria Casadellà, PhD**, obtained a degree in Biology from the University of Barcelona (UB) in 2010, which she followed up with an MSc in Biomedical Research awarded by Barcelona's Pompeu Fabra University (UPF) in 2011. While still a master's student she joined IrsiCaixa and, in her first year there, completed a second MSc in AIDS Pathogenesis and Treatment, awarded by the Autonomous University of Barcelona (UAB) in 2012. On 2016, she obtained her PhD in Molecular Biology and Biomedicine from Autonomous University of Barcelona, in the area of HIV drug resistance mutations and viral tropism analysed by next-generation sequencing techniques. She is currently continuing her research in HIV resistance epidemiology.

**Larisa H. Cavallari, PharmD**, is an Associate Professor in the Department of Pharmacotherapy and Translational Research and Director of Center for Pharmacogenomics at the University of Florida. She is also an Associate Director of University of Florida Health Personalized Medicine Program. Her research involves discovery of genetic associations with drug response and their translation into clinical practice, especially in underrepresented populations. Her research is currently funded by the NIH, FDA, and Canon Biomedical.

## Speaker Bios

**Jeffrey Chumley, MSc, MLS(ASCP)CM**, is a Medical Technologist Specialist in the Infectious Disease Division of ARUP Laboratories. He received a MS in Laboratory Medicine from the University of Utah with his thesis on the molecular detection of *Tropheryma whipplei*. His background is in molecular biology research focusing on HIV latency and HIV accessory proteins. His professional interests include clinical applications of digital PCR, medical laboratory science education, and the development and implementation of laboratory developed procedures.

**Mine S. Cicek, PhD**, received her Ph.D. in Genetics from Virginia Tech, Blacksburg, VA in 2001. Following a Postdoctoral Research Fellowship at the Cleveland Clinic, Lerner Research Institute, she came to Mayo Clinic, Rochester, Minnesota in 2005 as a R25 Cancer Genetic Molecular Epidemiology Fellow. After completion of her training, she then worked in the capacity as a Research Associate in the Division of Experimental Pathology and Laboratory Medicine from 2006-2010, then the Division of Epidemiology, Department of Health Sciences Research from 2010-2013. She is trained as a lab-based researcher in the cancer genetic epidemiology field and has worked on multiple tumor types. She has led and published multiple studies with similar research goals on prostate, colon and ovarian cancer genetics. In 2013, she accepted the position as the Laboratory Director of the Biospecimens Accessioning and Processing (BAP) core laboratory, Biorepository Program, and Center for Individualized Medicine at Mayo Clinic in Rochester, Minnesota. Dr. Cicek presently is an Assistant Professor of Laboratory Medicine and Pathology in the Mayo Clinic College of Medicine and is a Senior Associate Consultant at the Mayo Clinic, Rochester, Minnesota. Her main focus is to contribute her expertise in research studies and clinical trials overseeing biospecimen collections, processing and storage. Dr. Cicek continuously tries to bring new knowledge and technology to her lab to improve on quality and best practices for biospecimens usage in biobanking. She is Mayo Clinic PI of The Alliance NCTN Biorepository and Biospecimen Resource. She is Co-PI of the Precision Medicine Initiative (PMI) All of Us (AoU) Research Program Biobank.

**Robert M. Cook-Deegan**, is a professor in the School for the Future of Innovation in Society, and Consortium for Science, Policy & Outcomes at Arizona State University. He founded and directed Duke's Center for Genome Ethics, Law & Policy 2002-2012, and Duke-in-Washington through June 2016. Before Duke: National Academies of Science, Engineering and Medicine 1991-2002; National Center for Human Genome Research (NIH) 1989-1990; and congressional Office of Technology Assessment 1982-1988. MD, University of Colorado, 1979; and BA in chemistry (magna cum laude), Harvard, 1975. Author of *The Gene Wars: Science, Politics, and the Human Genome* and over 250 other publications.

### D

**Marija Debeljak, BSc**, is a molecular diagnostics technologist at Johns Hopkins University School of Medicine. She received her BS from Millersville University of Pennsylvania. She joined Johns Hopkins University's School of Medicine in 2010 to work in the laboratory of Dr. James Eshleman. She unboxed and set up the then-just released Ion Torrent PGM Next Generation Sequencer, implementing and optimizing protocols. She developed an assay that permits ultrasensitive detection of human DNA mixes, and in collaboration with Drs. Wheelan and Pevsner, identified 4,349 loci in the human genome that could be used for this purpose (Debeljak et al, JMD, 16: 495-503, 2014). Marija then applied this tool for early detection of leukemic relapse and was able to define a baseline level of host DNA in bone marrow of patients successfully transplanted. She was able to demonstrate, in a proof-of-principle study, that she could detect patients who subsequently relapsed earlier than the standard of care microsatellite/STR based assay (Debeljak et al, JMD, 19: 427-436, 2017). As the primary researcher on this project, she designed the primers, optimized the reactions, and developed the bioinformatic pipeline for analysis. Developing this technology has led to multiple collaborations with other investigators.

**Maria G. Dominguez-Bello, PhD, BSc, MSc**, is a microbiologist researching the microbiome functions and impacts. She received her undergraduate degree in 1983 from Simon Bolivar University in Venezuela, her Masters in 1987 and her PhD in 1990 (Microbiology) from University of Aberdeen, Scotland. She was an EU Marie Curie Postdoctoral fellow in the UK and in France. She was a professor at the Venezuelan Institute of Scientific Research (IVIC) until 2002, was a Professor at University of Puerto Rico for 11 years, and is now an Associate Professor of Medicine at NYU. She is a fellow of the American Academy of Microbiology (AAM), and of the Infectious Disease Society of America (IDSA). She has served as a Board member of several scientific journals, including *Microbial Ecology*, *Frontiers in Microbiology*, *Microbes and Infection*, *mBio* and *Scientific Reports*. Her lab

## Speaker Bios

integrates data from genomics/metagenomics, microbiology, ecology, physiology and anthropology to address broad questions about microbe-hosts interaction, including development of the infant microbiota, the impacts exerted by Western lifestyle and restoration.

**Todd E. Druley, MD, PhD**, is a board-certified pediatric hematologist/oncologist and Assistant Professor of Pediatrics, Developmental Biology and Genetics at Washington University School of Medicine. He obtained a Bachelor's in Cell and Structural Biology and a minor in Chemistry from the University of Illinois in 1994. He then completed the MD/PhD program at the University of Illinois where he studied mechanisms of chemotherapy resistance. In 2002, Dr. Druley joined Washington University as a pediatric resident and has remained; completing his fellowship in Pediatric Hematology and Oncology and joining the faculty in 2008. He is a member of the Children's Oncology Group (COG) Myeloid Disease Committee and Epidemiology Committee. Research in the Druley Lab is based on characterizing the link between abnormal human development and early childhood cancer, particularly infant leukemia. The lab has a track record for genomic methodology development and is currently applying that technology to improve molecular diagnostics in pediatric AML. Clinically, Dr. Druley is focused on pediatric cancer predisposition and serves as the co-director of the Pediatric Cancer Predisposition Program at St. Louis Children's Hospital.

### E

**Oliver Elemento, PhD**, is currently an Associate Professor, Acting Director of Englander Institute for Precision Medicine, Associate Director of the Institute for Computational Medicine, Director of the Laboratory of Cancer Systems Biology and Co-Leader of the Genetics, Epigenetics and Systems Biology Program in the Meyer Cancer Center at Weill Cornell Medicine. His group combines Big Data with experimentation and genomic profiling to accelerate the discovery of cancer cures and has published over 150 scientific papers in the area of genomics and drug discovery. Dr. Elemento oversaw the development of assays and analytic pipelines for clinical sequencing at Weill Cornell's Institute for Precision Medicine. He and his group developed computational methods for assessing the immune landscape of tumors, predicting which cancer patients will respond to immunotherapy using the Immuno-score, an integrative score that combines neoepitope discovery, immune gene expression and T cell receptor usage. His group routinely uses single cell genomics to analyze and link tumor and microenvironment heterogeneity to clinical outcomes. Dr. Elemento is also Co-Assistant Dean for Scientific Computing at Weill Cornell and the recipient of several awards including the NSF CAREER Award, the Hirschl Trust Career Scientist Award and the Walter B Wriston Award. He is the co-founder of two startup companies, OneThree Biotech (Artificial Intelligence-guided drug discovery) and ThucyDX (genomic profiling for immunotherapy patient selection) and on the Scientific Advisory Board of several genomics companies.

### F

**Marni J. Falk, MD**, is an Associate Professor in the Division of Human Genetics within the Department of Pediatrics at The Children's Hospital of Philadelphia (CHOP) and University of Pennsylvania Perelman School of Medicine. She received her B.S. degree in Biology graduating Summa cum Laude and Phi Beta Kappa, and M.D. degree in the Alpha Omega Alpha Medical Honor Society in a combined 7-year program at the George Washington University School of Medicine, after which she completed a 5-year Pediatrics and Clinical Genetics dual residency program at Case Western Reserve University. Dr. Falk directs the CHOP Mitochondrial Medicine Center to evaluate and manage individuals of all ages with suspected mitochondrial disease, and leads a translational research group that investigates the causes and global metabolic consequences of mitochondrial disease, and targeted therapies, in *C. elegans*, zebrafish, mouse, and human cell models of respiratory chain dysfunction, with increasing transition to clinical treatment trials in mitochondrial disease human subjects. She leads the global Mitochondrial Disease Sequence Data Resource (MSeqDR) consortium aimed at improving diagnostic approaches and genomics resources for mitochondrial disease. She also directs the CHOP/UPENN Mitochondria Research Affinity Group. Dr. Falk has authored over 85 publications in human genetics and mitochondrial disease.

**Ferric C. Fang, MD**, is an infectious diseases specialist and medical microbiologist with thirty years' experience as a clinician, educator and researcher. He obtained his undergraduate and medical training at Harvard University and his residency and fellowship training at UCSD. He is currently a Professor of Laboratory Medicine, Microbiology and Medicine at the University of Washington School of Medicine and the Director of Clinical Microbiology at Harborview Medical Center. He is also Deputy Editor of Clinical Infectious Diseases, past Editor-in-Chief of Infection and Immunity, and an elected fellow of the American Association for the Advancement of Science, the Association of American Physicians, the American Academy of Microbiology and the American Society of Clinical Investigation.

## Speaker Bios

**Andrew P. Feinberg, MD, MPH**, studied mathematics and humanities at Yale in the Directed Studies program, and he received his B.A. (1973) and M.D. (1976) from the accelerated medical program at Johns Hopkins University, as well as an M.P.H. from Johns Hopkins (1981). As a postdoctoral fellow with Sam Barondes at UCSD, he identified epigenetic memory of cell fate in Dictyostelium, which was followed by clinical training in medicine at University of Pennsylvania and medical genetics with Victor McKusick at Johns Hopkins, and was a fellow and Assistant Professor with Bert Vogelstein from 1983-1986, where he developed the random priming method which is ranked in the top 100 papers of all time in citations. He was a Howard Hughes investigator at University of Michigan from 1986-1994, when he returned to Johns Hopkins as King Fahd Professor of Medicine, Molecular Biology & Genetics, and Oncology. He holds an Adjunct Professorship at the Karolinska Institute in Sweden and is a Presidential Scholar at Harvard's Dana Farber Cancer Institute. Dr. Feinberg is Director of the Center for Epigenetics in the Institute for Basic Biomedical Sciences at Johns Hopkins.

Dr. Feinberg made the first discoveries of altered DNA methylation in human cancer, he discovered human imprinted genes and loss of imprinting (LOI) in cancer, and he proved the epigenetic hypothesis of cancer through his work on Beckwith-Wiedemann syndrome. He also identified the first common variant (genetic or epigenetic) for cancer risk, LOI of IGF2 in colorectal cancer. His discovery of epigenetically altered progenitor cells has led to a paradigm shift in our understanding of carcinogenesis. Most recently, he pioneered genome-scale epigenetics (epigenomics), with the first NIH funded Epigenome Center, pioneering methods including the first comprehensive genome-scale methylation discovering the major target for epigenetic variation in humans, CpG island shores. He led the first whole genome bisulfite sequencing analysis of human cancer, discovering large hypomethylated blocks that correspond to nuclear lamina-associated heterochromatin, as well as a mechanism for disruption of these blocks in epithelial-mesenchymal transition. His protean interests include developing the field of epigenetic epidemiology, first focusing on autoimmune disease, discovering the first example of epigenetic mediation of genetic variants in disease. His NIH Director's Pioneer Award followed from his idea in 2009 that genetic variants, in evolution or in cancer, could lead to increased epigenetic plasticity, enhancing survival in a changing environment. Direct evidence for this idea comes from his studies of metastasis driven by stochastic epigenetic change rather than metastasis-specific mutations.

He is the recipient of a MERIT Award of the National Cancer Institute and the NIH Director's Pioneer Award. His honors include election to the American Society for Clinical Investigation, the Association of American Physicians, the National Academy of Medicine, and the American Academy of Arts and Sciences. He was awarded the Feodor Lynen Medal for pioneering the field of cancer epigenetics, the Baruch Spinoza Chair of the University of Amsterdam, and is an inaugural Daniel Coit Gilman Scholar of Johns Hopkins University. He has received honorary doctorates from the University of Uppsala and the Karolinska Institute, and ISI ranks him among science's most cited authors.

**Birgit Funke, PhD**, received her Ph.D. in molecular genetics from the University of Würzburg, Germany and trained as a postdoctoral fellow at the Albert Einstein College of Medicine in New York where she identified the gene for 22q11 deletion syndrome. She subsequently completed a fellowship in Clinical Molecular Genetics at Harvard Medical School and has dedicated her career to personalized genetic medicine since then. She served as the director of Clinical Research and Development at the Laboratory for Molecular Medicine (LMM) and was among the first worldwide to implement clinical next generation sequencing (NGS). She also has a extensive experience in clinical diagnostic testing for inherited cardiovascular disorders and is co-chairing the cardiovascular domain working group of the Clinical Genome Resource (ClinGen) whose mission is to harmonize and centralize knowledge resources for genomic medicine. Today, Dr. Funke is Vice President of Clinical Affairs at Veritas Genetics and Part time Associate Professor of Pathology at Harvard Medical School. Her long term goal is to use genomic testing for disease prevention.

## G

**Michelle Grant, DO**, is an Associate Pathologist in the Department of Pathology at Geisinger Medical Center. She received her DO from the Philadelphia College of Osteopathic Medicine and completed her Anatomic and Clinical Pathology residency at Temple University Hospital in Philadelphia, Pennsylvania. She subsequently completed two fellowships in Transfusion Medicine at Thomas Jefferson University Hospital, Philadelphia, and in Hematopathology at University of Vermont Medical Center, Burlington, Vermont. While at the University of Vermont Medical Center, she trained in the Genomic Medicine Program in the Department of Pathology and Laboratory Medicine. She had a leadership role in the transdisciplinary development of a targeted genomic panel for hematologic malignancies. In her current role, she practices hematopathology and transfusion medicine and she has professional interest in the clinical utility and implementation science of Genomic Medicine.

## Speaker Bios

**Obi L. Griffith, PhD**, is Assistant Professor of Medicine and Assistant Director at the McDonnell Genome Institute at Washington University School of Medicine. Dr. Griffith completed bioinformatics post-doctoral fellowships at Lawrence Berkeley National Laboratory in Berkeley, California and at the BC Cancer Agency Genome Sciences Centre in Vancouver, Canada. He received his Ph.D. (Medical Genetics, 2008) from the University of British Columbia and B.S. (Biochemistry and Biology with Honors, 2002) from the University of Winnipeg. He is supported by an NCI Transition Career Development Award (K22) and NCI Early-Stage Development of Informatics Technologies for Cancer Research and Management (U01). He has received numerous other awards from Atomic Energy of Canada Ltd., Natural Sciences and Engineering Research Council, University of Winnipeg, University of British Columbia, Canadian Institutes of Health Research (CIHR), British Columbia Cancer Agency and Michael Smith Foundation for Health Research. He is a regular instructor of bioinformatics workshops for Cold Spring Harbor Laboratories and the Canadian Bioinformatics Workshops series. Dr. Griffith's research is focused on precision medicine approaches for cancer using genomic technologies. He develops and uses bioinformatics and statistical methods for the analysis of high throughput sequence data and identification of biomarkers for diagnostic, prognostic and drug response prediction.

**Wayne W. Grody, MD, PhD**, is a Professor in the Departments of Pathology & Laboratory Medicine, Pediatrics, and Human Genetics at the UCLA School of Medicine. He is the director of the Molecular Diagnostic Molecular Laboratories and the Clinical Genomics Center within the UCLA Medical Center. He is also an attending physician in the Department of Pediatrics, specializing in the care of patients with or at risk for genetic disorders. He has been one of the primary developers of quality assurance and ethical guidelines for DNA-based genetic testing for a number of governmental and professional agencies including the FDA, VA, AMA, CAP, ACMG, ASHG, NCCLS, CDC, NIH-DOE Human Genome Project (ELSI program), and PSRGN. He served as a member of the NIH-DOE Task Force on Genetic Testing, and was the working group chair for development of national guidelines for cystic fibrosis and factor V-Leiden mutation screening. More recently, he served as founding chair of an Advisory Committee on Genomic Medicine for the entire VA healthcare system and as president of the American College of Medical Genetics. He did his undergraduate work at Johns Hopkins University, received his M.D. and Ph.D. at Baylor College of Medicine, and completed residency and fellowship training at UCLA. He is double board-certified by the American Board of Pathology (Anatomic and Clinical Pathology, Molecular Genetic Pathology) and the American Board of Medical Genetics (Clinical Genetics, Molecular Genetics, and Biochemical Genetics).

**Wei Gu, MD, PhD**, is a board-certified pathologist and Molecular Genetic Pathology Fellow at UCSF. His research focuses on minimally invasive diagnostics using cell-free DNA/RNA with an emphasis on infectious disease, oncology, and prenatal diagnostics. He received his Bioengineering MD/PhD from Stanford University and worked on Non-Invasive Prenatal Diagnostics (NIPD) with Dr. Stephen Quake. Dr. Gu completed his clinical pathology residency at UCSF and is a post-doctoral scholar in Dr. Joseph DeRisi's laboratory. As a clinical fellow, he works with Dr. Steve Miller and Dr. Charles Chiu in the UCSF Clinical Microbiology Laboratory. He has co-developed and co-patented several technologies for molecular diagnostics, including a microfluidics platform as an undergraduate student, NIPD as a graduate student, and Depletion of Abundant Sequences by Hybridization (DASH) using CRISPR nucleases during residency.

### H

**Kimberly Hanson, MD, MHS**, is the Head of Immunocompromised Host Infectious Diseases Services at the University Hospital and Huntsman Cancer Center as well as Director of Clinical Microbiology within ARUP Laboratories. She is an Associate Professor of Medicine and Pathology, splitting her time between patient care, laboratory administration, research and teaching. Dr. Hanson was recruited to the University of Utah in 2008 from Duke University, where she obtained specialty training in Adult Infectious Diseases, Medical Microbiology and Health Sciences Research. She maintains an active research program that is focused on the development and validation of novel, cost-effective diagnostic tests for Infectious Diseases. Dr. Hanson has authored over 60 scientific papers, book chapters and review articles with a focus on transplant-related infectious diseases and clinical diagnostics. As the Medical Microbiology Fellowship Program Director, she is also actively involved in the training of medical students, residents and fellows within the University's School of Medicine.

**Marian H. Harris, MD, PhD**, is the Director of the Laboratory for Molecular Pediatric Pathology (LaMPP) at Boston Children's Hospital where she is a practicing hematopathologist and molecular pathologist. She received her MD and PhD from the University of Pennsylvania, completed her residency in AP and fellowship in Hematopathology at Brigham and Women's Hospital, and

## Speaker Bios

completed her fellowship in Molecular Genetic Pathology at Harvard Medical School. Dr. Harris's clinical and translational research focuses on molecular diagnostics in the context of pediatric malignancy and hematologic disease. She is particularly interested in using molecular diagnostics to refine pathologic diagnoses, as well as to provide prognostic and therapeutic guidance in clinical care, and is a co-investigator on a number of multi-institutional clinical trials using molecular diagnostics for these purposes.

**Andrew Hilmer, PhD**, is a Senior Account Manager at Applied StemCell, where he works directly with key accounts to develop technical strategies for advancing their research programs. At Applied StemCell, Dr. Hilmer has also served as Product Manager for the ONCORE™ series of isogenic cell lines, which consists of over 150 off-the-shelf cell lines that have been engineered to possess diverse oncogenic mutations using the CRISPR/Cas9 platform. Prior to joining Applied StemCell, Andrew was an NIH Postdoctoral Fellow at Stanford University, and he completed his Ph.D. training in Chemical Engineering at MIT. He has authored or co-authored more than 20 scientific manuscripts, and is listed as an inventor on three granted or pending patents.

**Nicole L. Hoppman, PhD**, is an Assistant Professor of Laboratory Medicine and Pathology and a Co-Director of both the Clinical Genomics and Clinical Genome Sequencing Laboratories at Mayo Clinic. She earned her BS in Biology from the University of Illinois at Urbana-Champaign and her PhD in Human Genetics from the University of Maryland School of Medicine. Dr. Hoppman then completed fellowships, and is board certified by the American Board of Medical Genetics and Genomics, in both Clinical Molecular Genetics and Clinical Cytogenetics. Her main area of interest and expertise is in the application of molecular technologies to answer classical cytogenetics questions. Dr. Hoppman recently helped launched the world's first ever clinical Mate-Pair sequencing assay for the detection and characterization of balanced chromosome rearrangements in both constitutional and oncology specimens.

**Jessica A. Houskeeper, MRes**, is a Senior Laboratory Specialist in the Pathology Department at the University of Utah. Jessica received a BS in Biology from Brigham Young University in 2012. She then went on to earn a Masters of Research in Biomedical Sciences from the University of Glasgow in Scotland and specialized in Cellular Engineering. As a member of the Carl Wittwer Lab, her current research is focused on extreme-speed diagnostics where detection of viral RNA by real-time PCR occurs in two minutes or less.

**Susan J. Hsiao, MD, PhD**, is an Assistant Professor in the Department of Pathology and Cell Biology at Columbia University Medical Center. She serves as Director of Bioinformatics in the Laboratory of Personalized Genomic Medicine. Her interests include translational research in cancer genomics and improvements in storage and reporting of clinical genomics data. She received her MD and PhD degrees from New York University School of Medicine. She completed residency training in anatomic pathology at New York Presbyterian Hospital/Columbia University Medical Center and completed fellowship training in molecular genetic pathology at University of Pittsburgh Medical Center.

### I

**A. John Iafrate, MD, PhD**, is a Professor of Pathology at Harvard Medical School, and is director of the Director of the Center for Integrated Diagnostics (CID), a clinical laboratory for molecular diagnostics at the Massachusetts General Hospital (MGH). Dr. Iafrate received his MD/PhD dual degree from the State University of New York at Stony Brook in 2000 and was trained in anatomic and molecular genetic pathology at Brigham and Women's Hospital. Dr. Iafrate is a board-certified Pathologist, and has been on staff at MGH since 2005. The CID provides rapid personalized genomic testing to help inform cancer treatment decisions for patients. His research is focused on lung and brain tumors, where he has been closely involved in the clinical development of crizotinib and companion diagnostics in ALK- and ROS1 positive lung cancers. His lab has developed several technologies for sequencing tumors, including SNaPshot and the next-generation sequencing-based Anchored Multiplex PCR, both techniques have been widely used in the molecular diagnostics community.

### J

**Lawrence J. Jennings, MD, PhD**, is an Associate Professor in the Department of Pathology and Laboratory Medicine, Northwestern University's Feinberg School of Medicine. He is board-certificated in anatomic and clinical pathology, molecular genetic pathology, histocompatibility and immunogenetics. He is director of HLA and molecular diagnostic laboratories at Ann and Robert

## Speaker Bios

H. Lurie Children's Hospital of Chicago. He has served as chair of the Molecular Oncology Resource Committee for CAP, the Solid Tumor Representative to the Clinical Practice Committee for AMP and chaired the NGS Analytical Validation Working Group of the Clinical Practice Committee.

**Hanlee P. Ji, MD**, is a medical oncologist, clinical geneticist and physician scientist whose research program focuses on the development, application and research of genomic determinants of cancer. He is current an Associate Professor of Medicine at Stanford University and Senior Associate Director of the Stanford Genome Technology Center. In addition to his genomics program, he specializes in the treatment of patients with metastatic gastrointestinal cancers and genetic evaluation of hereditary cancer disorders. Having trained at the University of Washington in medical genetics fellowship and Stanford University for medical oncology, he uses his background in both areas to better understand the biological and clinical implications of genomic alterations. One of the major objectives of his research is the development of new genomic technologies and genetic assays that inform critical clinical questions encountered by oncologists and physicians. Among the various technologies his group has developed include the use of molecular barcodes, in vitro Crispr assays and linked reads approaches to improve the analysis of structural variation and aneuploidy in gastrointestinal cancers. He is applying these approaches on primary clinical specimens to better inform our understanding of the genomic structural complexities seen in gastric and colorectal cancer.

**Vaidehi Jobanputra, PhD**, is the Director of Molecular Diagnostics at the New York Genome Center (NYGC). She holds a joint appointment as an Associate Professor of Pathology and Cell Biology at Columbia University Medical Center, where she serves as a co-director of the Laboratory of Personalized Genomic Medicine at Columbia University Medical Center and Clinical Cytogenetics at the New York Presbyterian Hospital. Dr. Jobanputra received her PhD from the All India Institute of Medical Sciences, New Delhi and a MS in Biostatistics in the clinical research track from Columbia University. She is a board certified (American Board of Medical Genetics and Genomics) clinical molecular geneticist and cytogeneticist. She is interested in clinical and translational research in genetic diseases and cancer. She is a member of the Dosage Sensitivity Curation task team of the ClinGen Genomic Variant Working Group. Dr. Jobanputra is responsible for the creation and build-out of NYGC's clinical diagnostics laboratory. She has developed next-generation sequencing molecular diagnostic assays for Oncology and Genetic Testing. Recently, her lab participated in two clinical studies to investigate efficiency and feasibility of whole genome sequencing to inform therapeutic options based on the individual's genomic profile.

**Melissa R. Johnson, BSc**, is a Technical Supervisor over the Molecular Infectious Disease Laboratory at ARUP Laboratories in Salt Lake City, Utah. She received a BS in Biological Sciences from Utah Valley University. She brings over 14 years of molecular laboratory experience with seven of those years being directly involved in transitioning new laboratory developed tests and instrumentation into the clinical lab.

**J. Keith Joung, MD, PhD**, is a leading innovator in the field of genome editing. He is currently Desmond and Ann Heathwood Research Scholar, Pathologist, and Associate Chief of Pathology for Research at Massachusetts General Hospital (MGH) and is Professor of Pathology at Harvard Medical School. He is also a member of the Center for Cancer Research and the Center for Computational and Integrative Biology at MGH. Dr. Joung has been a pioneer in the development of important technologies for targeted genome editing and epigenome editing of human cells. He has received numerous awards including an NIH Director's Pioneer Award, an NIH Director's Transformative Research Project R01 Award, the MGH Research Scholar Award, an NIH R35 MIRA (Maximizing Investigators Research Award), and election into the American Association of University Pathologists. He serves on the Board of Directors for the American Society of Gene and Cell Therapy and the editorial boards of *Genome Biology*, *Human Gene Therapy*, and *Trends in Biotechnology*. He is also a scientific co-founder of and advisor to Editas Medicine, a company dedicated to the translation of genome editing technologies for therapy of human diseases. Dr. Joung holds a Ph.D. in genetics from Harvard University, an M.D. from Harvard Medical School and an A.B. in biochemical sciences from Harvard College.

### K

**Jennifer A. Kanakry, MD**, is the Clinical Head of Transplant for the Experimental Transplantation and Immunology Branch at the National Cancer Institute within the National Institutes of Health. Dr. Kanakry received her B.A. from Pomona College in Claremont, California, where she studied cognitive neuropsychology and biology. She then went on to receive her medical degree from a joint program

## Speaker Bios

between Dartmouth College and Brown University. She completed both her residency training in Internal Medicine and fellowship training in Hematology at Johns Hopkins Hospital. Her clinical research focuses on virus-associated cancers, EBV-related blood based tumor markers, and allogeneic bone marrow transplantation. In 2013, she joined the Hematology faculty at Johns Hopkins, where she primarily focused on treating patients with diseases that more commonly occur in the setting of immunodeficiency, including lymphoma, disorders of immune dysregulation, and virus-associated lymphoproliferative disorders. She continued her research on Epstein-Barr virus and Kaposi sarcoma-associated herpesvirus related cancers, investigating biomarkers for these diseases and carrying out clinical trials for patients with these cancers. In 2015, she joined the National Cancer Institute, where she continues to focus on diseases related to immunodeficiency, virus-associated malignancies, blood-based markers of virus-associated cancers, and the role of allogeneic bone marrow transplantation and other adoptive immunotherapies in curing inherited immunodeficiency diseases.

**Daniel C. Koboldt, MSc**, is a Principal Investigator for the Institute of Genomic Medicine (IGM) at Nationwide Children's Hospital, and Research Assistant Professor of Pediatrics at The Ohio State University. His group at IGM applies next-generation sequencing (NGS) technologies to understand the genetic basis of rare disorders and pediatric cancers. He is also the developer of VarScan, a widely-used tool for detecting somatic mutations and copy number alterations using NGS data; and MendelScan, a variant prioritization and disease gene mapping tool for rare inherited diseases.

### L

**Melissa J. Landrum, PhD**, is the team lead for the ClinVar database, a publicly available archive of variants and their relationship to disease at the National Center for Biotechnology Information (NCBI) at the NIH. She received her PhD in human genetics from Johns Hopkins University in 1999. Prior to working on ClinVar, she spent 12 years working on the RefSeq project at NCBI, where she provided manual gene annotation for human and other mammalian genomes.

**Michael A. Lewinski, PhD, D(ABMM)**, is currently the Sr. Director of Medical Affairs for Microbiology at Roche Molecular Systems, Inc. in Pleasanton, California. He completed his Doctor of Philosophy degree in Microbiology and Immunology and a clinical postdoctoral Fellowship in Medical and Public Health Laboratory Microbiology at UCLA. He is a Diplomate of the American Board of Medical Microbiology, a licensed Laboratory Director and a certified Molecular Biologist. Prior to joining Roche, he was the Chief of Clinical Microbiology and Professor of Pathology and Laboratory Medicine, David Geffen School of Medicine at UCLA. Prior to UCLA he was the Senior Scientific Director of Infectious Diseases and Clinical R&D at Quest Diagnostics Nichols Institute and Focus Diagnostics, Inc. He has served as the President of the Southern California Branch of the American Society for Microbiology, served on the Council of the Pan American Society of Clinical Virology and as Chair of the Infectious Disease Subdivision of the Association for Molecular Pathology and currently serves on the Editorial Board for the Journal of Clinical Virology. His research interests have focused on the development and the automation of rapid molecular tests for the detection, quantification, and characterization of microorganisms for the diagnosis of disease and for monitoring disease progression and response to therapy. He holds several patents and has published in various disciplines within infectious diseases and laboratory medicine.

**Alexander Lex, PhD**, is an Assistant Professor of Computer Science at the Scientific Computing and Imaging Institute and the School of Computing at the University of Utah. Before joining Utah he was a lecturer and a post-doctoral visualization researcher in Hanspeter Pfister's group at the Harvard School of Engineering and Applied Sciences. He received his PhD from the Graz University of Technology in 2012. In 2011 he was a visiting researcher at the Computational Genomics Research Group at Harvard Medical School. His primary research interests are data visualization, especially applied to molecular biology, and human computer interaction. He is one of the principal investigators of the Caleydo project, an open-source framework for the visualization of biological data. Alexander is the recipient of an Erwin Schroedinger Fellowship, granted by the Austrian Science Fund, and has won numerous awards, including multiple best paper awards or honorable mentions at visualization conferences and a best dissertation award from his alma mater. <http://alexander-lex.net>

**Marilyn M. Li, MD**, is a Professor of Pathology and Laboratory Medicine, Professor of Pediatrics, Vice Chief of the Division of Genomic Diagnostics, Director of Cancer Genomic Diagnostics at Children's Hospital of Philadelphia, University of Pennsylvania, Perelman School of Medicine. Dr. Li holds a American Board of Medical Genetics certification in Clinical Cytogenetics and Clinical Molecular Genetics. Prior to her

## Speaker Bios

appointment at CHOP, she served as the director of Cancer Genetics Laboratory, Baylor College of Medicine, the director of the Tulane Clinical Cytogenetics Laboratory, Clinical Molecular Genetics Laboratory, Tulane Matrix DNA Diagnostic Laboratory, and the director of the Genomics Core Laboratory of Louisiana Cancer Research Consortium. She is a fellow of ACMGG, ASHG, SWOG, AMP, ASH, and ASCO. Dr. Li's primary research interest is clinical application of microarray and next generation sequencing technologies in cancer research and clinical diagnosis. Her group has studied thousands of cancer genomes using custom-designed cancer-specific arrays, cancer-specific next generation sequencing panels and cancer exomes. Their experience demonstrated that these state of the art technologies detect genomic alterations that can be used for cancer diagnosis, risk stratification, disease follow-up, and therapeutic selection. She initiated, organized and is the first president of the Cancer Genomics Consortium, an international consortium whose mission is to facilitate the development and utilization of microarray-based technology and NGS technology for high quality, reliable cancer genetic testing in diagnostic laboratories. She is the recipient of the 2010-2011 Luminex/ACMGF Award for the promotion of safe and effective genetic testing and services. Other research projects in her lab include studies of common leukemia- and lymphoma-associated genetic aberrations in healthy individuals and mosaic overgrowth syndromes and chromosome microdeletion syndromes. She is an active member of the medical school and is involved in teaching medical students and Ph.D. students, and training residents and fellows.

**Stephen Lincoln**, is responsible for scientific collaborations and clinical studies at Invitae. He has over 25 years of experience in bioinformatics, specifically as it is applied in the fields of genetics and genomics. His most recent research include studies of the clinical validity and utility of expanded genetic testing in hereditary cancers (PMIDs 26270727 and 26207792). He also works on rigorous methods to assess analytic validity of new assays and algorithms. Previously he held senior positions at Complete Genomics, Affymetrix and Incyte Genomics. Steve's academic background includes 7 years with Eric Lander at the Whitehead Institute and MIT during the initial phases of the human genome project.

**Elaine Lyon, PhD**, is professor of pathology at the University of Utah School of Medicine and a Medical Director of Molecular Genetics/Genomics at ARUP Laboratories. She received her Ph.D. in Medical Genetics and is certified by the American Board of Medical Genetics in Clinical Molecular Genetics. Dr. Lyon's clinical laboratory responsibilities include quality assurance, review of technical assays, and interpretation of results in the context of the clinical indications. In addition to her clinical service, she is involved with research and development in human genetics, validating methods under CLIA requirements, and transferring them to the clinical laboratory. Dr. Lyon's national participation has promoted appropriate molecular genetic clinical testing. As President of AMP in 2014, she was senior author on a manuscript entitled *The Spectrum of Clinical Utilities in Molecular Pathology Testing Procedures for Inherited Conditions and Cancer: A Report of the Association for Molecular Pathology*. She continues her involvement with AMP's Professional Relations and Economic Affairs committees and is chair of the working group for Variant Interpretation Across Laboratories (VITAL). She is a member of the American Medical Association's Molecular Pathology Advisory Group, reviewing proposals for molecular pathology coding. She recently was elected a molecular director for the American College of Medical Genetics and Genomics (ACMG) Board of Directors.

### M

**Navin Mahadevan, MD, PhD**, has completed a Molecular and Genetic Pathology Fellowship at Harvard Medical School, and is currently completing Anatomic Pathology residency training at the Brigham and Women's Hospital in Boston, Massachusetts. He received his undergraduate training in Biology at Washington University in St. Louis. After a Fulbright Scholarship in Melbourne, Australia, he attended the University of California, San Diego for MD/PhD training. He did his thesis work in the lab of Dr. Maurizio Zanetti, where he investigated the cell-extrinsic effects of tumor endoplasmic reticulum stress on myeloid antigen presenting cells, and the tumor microenvironment. As part of his current training in pathology, he is interested in further molecular and immunopathologic profiling of the tumor microenvironment, including in the setting of immunotherapy.

**Joseph J. Maleszewski, MD**, is a Associate Professor of Pathology and Medicine at Mayo Clinic College of Medicine, USA, where he is also a consultant with joint appointments in Laboratory Medicine & Pathology, Cardiovascular Medicine and Medical Genomics. He serves as section head of cardiovascular pathology and program director of the cardiovascular pathology training fellowship. He received his MD at Michigan State University's College of Human Medicine, and then took his residency in anatomic and clinical pathology at The Johns Hopkins Hospital. He completed

## Speaker Bios

fellowships in cardiovascular pathology and molecular genetic pathology at Mayo Clinic. His main areas of research interest are cardiac tumours, cardiovascular diagnostics in congenital and acquired cardiovascular disease, and genomics/proteomics of cardiomyopathies. He has authored more than 110 manuscripts and 60 book chapters as well as edited 2 major texts.

**Diana Mandelker, MD, PhD**, is an assistant attending pathologist on the molecular diagnostics service at Memorial Sloan Kettering Cancer Center (MSKCC) and specializes in germline genetic analysis. She is also the associate director of the molecular genetic pathology training program at MSKCC. Dr. Mandelker received her BS and MS degrees from Yale University in Molecular Biophysics and Biochemistry. She then completed her MD and PhD degrees at the Johns Hopkins School of Medicine, followed by a clinical pathology residency at Brigham and Women's Hospital and pathology informatics and molecular genetic pathology fellowships at Harvard Medical School.

**Patrick Mann, MD**, is a molecular genetic pathology fellow in the Department of Pathology & Immunology at Washington University. He received his M.D. from the University of Chicago and completed a residency in Anatomic and Clinical Pathology at University of Colorado. Since coming to Washington University, he has been active in the Genomics & Pathology Services, presenting at bimonthly departmental molecular didactics, and assisting in several projects including development of a RNA-Seq panel and evaluation of prospective proficiency testing samples for next generation sequencing. Today he will be talking about identifying patients at risk for myelodysplastic syndrome through Next Generation Sequencing of cytopenias with equivocal or absent morphologic dysplasia.

**Jonna Mazet, DVM, MPVM, PhD**, is a Professor of Epidemiology and Disease Ecology and Executive Director of the One Health Institute in the UC Davis School of Veterinary Medicine, where she focuses on global health problem solving, especially for emerging infectious disease and conservation challenges. Dr. Mazet is active in international One Health research programs, most notably in relation to disease transmission among wildlife, domestic animals, and people and the ecological drivers of disease emergence. Currently, she is the Global Director of a \$175 million viral emergence early warning project, named PREDICT, that has been developed with the US Agency for International Development's (USAID) Emerging Pandemic Threats Program. She was elected to the US National Academy of Medicine in 2013 in recognition of her successful and innovative approach to emerging environmental and global health threats and serves on the National Academies' Forum on Microbial Threats, as well as chairs the One Health Work Group.

**Jamie McDonald, MSc**, is a Licensed Genetic Counselor and Assistant Professor, Department of Pathology. She received an undergraduate degree from Carleton College in Biology and a master's degree in Genetic Counseling at the University of California at Berkeley. She is certified as a Genetic Counselor by the American Board of Medical Genetics and American Board of Genetic Counseling. Jamie began work at the University of Utah Medical Center in 1988 and worked in the Departments of Pediatrics, Obstetrics and Gynecology and the Huntsman Cancer Institute's Hereditary Cancer Clinics as a managing genetic counselor before focusing on hereditary hemorrhage telangiectasia (HHT). In 1995 she helped establish the University of Utah HHT Center of Excellence and has been a core member of its multidisciplinary team since. She has been the Center Co-Director for many years. Jamie has many publications focused on molecular diagnostics for HHT. She has served on the HHT Foundation International Medical and Scientific Advisory Board for many years. She co-chaired the Clinical and Molecular Diagnosis Group at the International Management Guidelines Conference, which lead to publication of consensus guidelines for the diagnosis and management of this vascular dysplasia.

**Lindsay Meyers, BSc**, is the Director of the Medical Data Systems Program at BioFire Diagnostics and has lead the creation of FilmArray Trend, BioFire's cloud based epidemiology research system. She began her career on the FilmArray invention team, as one of the lead biochemistry Scientists. Since FilmArray launch her areas of expertise have expanded to health information privacy and data science. She created and directed the Post Market Surveillance and Data Science teams at BioFire Diagnostics. More recently, her groups have developed data research products for clinical labs and BioFire scientific teams, in coordination with public health agencies and patient privacy experts. Her research objective is to inform health care professionals regarding syndromic-related pathogen circulation, primarily those responsible for respiratory and gastrointestinal diseases. She aims to extend the utility of FilmArray through data exploration and study of metrics available only in the Trend cloud system, containing over 350 thousand exported patient tests results.

## Speaker Bios

**Nathan D. Montgomery, MD, PhD**, is an assistant professor in the Department of Pathology and Laboratory Medicine at the University of North Carolina School of Medicine. His primary clinical and research interests center on the underlying biology, including molecular features, of hematolymphoid neoplasms. Much of his research has been based in sub-Saharan Africa, where Dr. Montgomery has worked to expand laboratory capacity, including access to molecular diagnostics. In his clinical work at UNC, Dr. Montgomery has been actively involved in efforts to incorporate next-generation sequencing technologies into the diagnostic work-up of hematologic malignancies, with particular interest in efforts to evaluate performance and quality measures in the clinical setting. Dr. Montgomery completed both his MD and PhD degrees at UNC, where he remained for residency and fellowship training. He is board certified in Anatomic and Clinical Pathology and Hematopathology, and is also boards eligible in Molecular Genetic Pathology.

**Ann M. Moyer, MD, PhD**, is a co-Director of the Personalized Genomics Laboratory at Mayo Clinic. The Personalized Genomics Laboratory specializes in genetic testing for pharmacogenomics, cardiovascular diseases, and primary immunodeficiencies. Dr. Moyer is a consultant in the Department of Laboratory Medicine and Pathology where she holds the academic rank of Assistant Professor. She earned her medical and graduate degrees as part of the Mayo Clinic Medical Scientist Training Program. Her thesis work focused on pharmacogenomics of phase II drug metabolizing enzymes. She completed residency training in Anatomic and Clinical Pathology, with an additional year devoted to research, followed by a fellowship in Molecular Genetic Pathology, also at the Mayo Clinic. Dr. Moyer serves as a member of the College of American Pathologists/American College of Medical Genetics Molecular Genetics Committee and Pharmacogenetics Workgroup.

**Charles G. Mullighan, MBBS (Hons), MSc, MD**, earned his Bachelor and Doctor of Medicine degrees from the University of Adelaide, Australia, and his Master of Science degree from the University of London. He trained in hematology and hematopathology in Adelaide. He trained as a postdoctoral fellow at St Jude. He joined the faculty in 2008 and is currently Member in the Department of Pathology and co-leader of the Hematologic Malignancies Program. His research uses genomic profiling and experimental modeling to investigate the genetic basis of leukemia, most notably high risk acute lymphoblastic leukemia. This work has identified several new genetic alterations that contribute to the development of leukemia, and have entered the clinic as diagnostic tests and new therapeutic targets. He has earned several honors including being named a Pew Scholar in the Biomedical Sciences (2009), being awarded the American Society for Hematology Merit Award (2007), Joanne Levy Memorial Award for Outstanding Achievement (2008) and William Dameshek Prize (2016), election to the American Society of Clinical Investigation (2012) and American Association of Physicians (2016), and the Meyenburg Prize for Cancer Research (2012).

### N

**Deborah Neklason, PhD**, is the Program Director of Utah Genome Project, Associate Professor of Genetic Epidemiology in the Department of Internal Medicine and a Huntsman Cancer Institute Investigator at the University of Utah. As Program Director of Utah Genome Project, she works closely with colleagues to apply the latest sequencing technologies, bioinformatics tools, and human subject research ethics to solve the genetic basis of many important medical conditions. Dr. Neklason's current research projects involve identification of inherited genetic variants that are important in cancer risk by engaging large families identified in Utah Population database, developing diagnostics to identify individuals at risk of developing colon cancer, and clinical trials to prevent cancer. One of her exciting new projects uses geocoding data across time for individuals in Utah Population database to evaluate environmental modifiers of cancer risk. Prior to joining the faculty at University of Utah, Dr. Neklason was manager for biochemical assay products at Echelon Biosciences in Salt Lake City. She received her PhD in Human Genetics from the University of Utah in 1999.

**Marina N. Nikiforova, MD**, is Professor of Pathology and Director of the Molecular & Genomic Pathology Laboratory at the University of Pittsburgh Medical Center (UPMC). Dr. Nikiforova has a longstanding clinical and research interests in genomics of thyroid cancer and brain tumors and she has led the development of a novel NGS-based tests for preoperative diagnosis of thyroid cancer in FNA samples (ThyroSeq) and for diagnosis, prognostication and treatment of adult and pediatric brain tumors (GlioSeq). Dr. Nikiforova is a member of the Association for Molecular Pathology (AMP) where she served on Nominating committee, Program Committee, and as a Chair of Solid Tumors subdivision. During past two years, Dr. Nikiforova served as a Chair of the Clinical Practice Committee and on the Board of Directors at AMP. Under her leadership, the committee has developed analytical and clinical guidelines for NGS analysis and variant interpretation in cancer. She is also a member of the Laboratory Practice Committee at the American Thyroid Association (ATA). Dr. Nikiforova has published over 150 peer-reviewed scientific articles and five book chapters, most of which in the area of molecular diagnostics of cancer.

## Speaker Bios

**Frederick S. Nolte, PhD, D(ABMM), F(AAM)**, is currently Professor and Vice Chair for Laboratory Medicine in the Department of Pathology and Laboratory Medicine, and Medical Director of Clinical Laboratories, Molecular Pathology and Point-Care-Testing at the Medical University of South Carolina. He is a Diplomate of the American Board of Medical Microbiology and a Fellow of the American Academy of Microbiology. Dr. Nolte completed his B.S. degree in biology at the University of Cincinnati and his Ph.D. in medical microbiology at the Ohio State University. Dr. Nolte completed a postdoctoral fellowship in public health and medical laboratory microbiology at the University of Rochester. He is active in and held positions of responsibility in the American Society for Microbiology, Association for Molecular Pathology, Clinical and Laboratory Standards Institute, Infectious Diseases Society of America, American Society for Clinical Pathology, American Association for Clinical Chemistry, and College of American Pathologists. He has authored numerous book chapters, practice guidelines, and more than 100 peer-reviewed publications in the areas of clinical microbiology and molecular diagnostics. He has served of the scientific advisory boards and provided consulting services to many start-up and established diagnostic companies. In addition, he has experience with FDA clinical trial work and served as a member and consultant to the CDRH FDA Microbiology Devices Panel.

### O

**Damon Olson, MD**, is currently a molecular genetic pathology fellow at Baylor College of Medicine in Houston, Texas. He recently completed a pediatric pathology fellowship at the University of Colorado Denver (2016-2017) and is board-certified in Anatomic and Clinical Pathology. He was chief resident at the University of Colorado Denver where he finished training in 2016. His previous education includes medical training at the University of Minnesota - Twin Cities and a bachelor of science in French and pre-medical studies at the University of Nebraska Lincoln. He has previously presented at the Association for Molecular Pathology and the United States and Canadian Academy of Pathology annual conferences. He has upcoming presentations at the Society for Pediatric Pathology meeting and is an active fellow of the College of American Pathologists. Additional works include peer-reviewed articles and book contributions. Next year, he is seeking new opportunities to employ his interests in pediatric pathology and associated molecular techniques for diagnostic, prognostic, and therapeutic management of pediatric diseases.

### P

**Laura Pasqualucci, MD**, is a Professor of Pathology and Cell Biology at the Institute for Cancer Genetics, Columbia University. She received her medical degree from the University of Perugia Medical School in Italy, where she completed a residency in OncoHematology before moving to the United States for a post-doctoral fellowship with Dr. Riccardo Dalla-Favera. She joined the faculty of Columbia University as an Assistant Professor in 2001. Dr. Pasqualucci's research interests focus on the molecular pathogenesis of B cell malignancies, with emphasis on its most common type, diffuse large B cell lymphoma (DLBCL). Her work has significantly contributed to the understanding of the genetic basis of this aggressive cancer by identifying and functionally characterizing several genetic aberrations that disrupt critical processes/signaling pathways implicated in normal B cell development, leading to malignant transformation. More recently, her group uncovered highly recurrent mutations in genes that encode for epigenetic modifiers, including the methyltransferase KMT2D and the acetyltransferases CREBBP/p300, which have emerged as central players in many different cancers. This information is currently being exploited for the development of more effective targeted therapeutic approaches. Dr. Pasqualucci has authored more than 100 peer-reviewed scientific articles and book chapters. She serves on the editorial board of Blood and the Journal of Experimental Medicine, as well as on numerous national and international grant review panels, including the NIH, the Leukemia and Lymphoma Society and the AACR. She is also a member of the Lymphoma Research Foundation Scientific Advisory Board and the American Society of Hematology Committee on Scientific Affairs.

**Andrea L. Penton, PhD**, is Associate Director of the UNC Hospitals cytogenetics laboratory. She is also Clinical Assistant Professor in Pathology and Laboratory Medicine. Prior to this she was an Assistant Technical Director of Clinical Cytogenetics at LabCorp and completed her fellowship at the Children's Hospital of Philadelphia, (CHOP). She is board certified in Clinical Cytogenetics by the American Board of Medical Genetics and Genomics, and uses cytogenetic and microarray technologies to diagnose constitutional, prenatal and oncology patient samples. She has extensive experience in molecular genetics and research. In addition, she is involved in teaching, laboratory quality control and literature review. Her interests are in genetic mechanisms and aneuploidy correction during human development.

## Speaker Bios

**Jonas Pettersson, PhD**, is the Molecular Pathology Supervisor at Keck Medical Center of USC in Los Angeles, CA. He completed his PhD in Molecular Biology at the University of Umea, Sweden in 2001. His graduate work focused on the pathogenesis of *Yersinia pseudotuberculosis*. As a visiting fellow at the Rocky Mountain Laboratories (NIAID/NIH) in Hamilton, MT his research focused on *Yersinia pestis*, the causative agent of plague and *Borrelia spirochetes* causing Lyme disease and relapsing fever. At the Baylor College of Medicine in Houston, TX Jonas worked on understanding virulence factors of *Treponema pallidum*, the spirochete causing syphilis. He worked for one year at a small biotech company before deciding to venture into the field of Clinical and Public Health Microbiology. He trained to become a Public Health Microbiologist and has also trained and received licensure for Clinical Microbiology and Molecular Biology.

**John D. Pfeifer, MD, PhD**, is Vice Chair for Clinical Affairs in the Department of Pathology at Washington University School of Medicine. He is a Professor of Pathology and is board certified in Anatomic Pathology and also Molecular Genetic Pathology. Over the last several years Dr. Pfeifer has helped lead the development of Genomics and Pathology Services at Washington University in St. Louis (GPS@WUSTL). GPS@WUSTL is a CAP accredited/CLIA licensed environment designed around next generation sequencing (NGS) analysis to support patient care, clinical trials, and translational research studies, and Dr. Pfeifer manages the development of the wet bench analytics, bioinformatics, and faculty staffing models required to support NGS for clinical applications. He is also involved in NGS clinical test design (including gene-panel based testing versus exome- or genome-based sequencing) for inherited diseases and cancer, and in the evaluation of different sequencing platforms. Dr. Pfeifer's academic interests are primarily focused on investigation of the role of molecular genetic testing in the analysis of tissue specimens, specifically on the methods and clinical settings in which molecular testing provides independent information that increases diagnostic accuracy, provides more accurate prognostic estimates, or can be used to guide therapy. In line with his role in the development of GPS@WUSTL, several of his recent projects have focused on the role of NGS in patient care.

**Christopher R. Polage, MD, MAS**, is an Associate Professor of Pathology and Infectious Diseases at the University of California Davis (UC Davis), School of Medicine and Medical Director of the Clinical Microbiology Laboratory for the UC Davis Health System. He conducts outcomes and healthcare services research related to infectious disease diagnostics and healthcare-associated infections. He is on the Editorial Board for the Journal of Clinical Microbiology and received a Distinguished Clinical Research Achievement Award from the Clinical Research Forum in 2016 for his studies of clinical outcomes in hospitalized patients with discrepant test results for *Clostridium difficile* infection.

**Victoria M. Pratt, PhD, FACMG**, is a Medical and Clinical Molecular Geneticist board-certified by the American College of Medical Genetics. She is the Director of the Pharmacogenomics Laboratory and Molecular Genetics Laboratory at Indiana University School of Medicine. Prior to joining Indiana University, she was Chief Director, Molecular Genetics, for Quest Diagnostics Nichols Institute. In addition to her work, Dr. Pratt is currently serving on the Centers for Medicare and Medicaid Services Clinical Diagnostic Laboratory Tests Advisory Panel. Dr. Pratt continues to serve on the CDC's GeT-RM program for reference materials for Molecular Genetics. She is currently serving on the National Academies (formerly Institute of Medicine)'s Roundtable on Genomics and Precision Health. She also served on the U.S. Secretary of Health and Human Services Advisory Committee on Genetics, Health and Society for the Oversight of Genetic Testing and the Advisory Committee on Hereditary Disorders in Newborns and Children. She also participated in the preparation of the Morbidity and Mortality Weekly Report for Best Practices in Molecular Genetic Testing for the Centers for Disease Control and Prevention (CDC) and the Institute of Medicine/National Academy of Medicine's Committee on Policy Issues in the Clinical Development and Use of Biomarkers for Molecularly Targeted Therapies. Dr. Pratt is Past Chair of the Genetics, Clinical Practice and the Program committees and is currently a member of the Economic Affairs Professional Relations committees for the Association of Molecular Pathology. She is a former advisor of EuroGenTest for genetic test validation. Dr. Pratt serves on the American Medical Association's (AMA's) Molecular Pathology Current Procedural Terminology (CPT) Advisory committee. Dr. Pratt has authored over 50 peer-reviewed manuscripts and book chapters. She is also an Associate Editor for the Journal of Molecular Pathology. Dr. Pratt graduated with a Ph.D. in Medical and Molecular Genetics from Indiana University School of Medicine, Indianapolis, IN in 1994. Her fellowship training was in Ph.D. Medical and Clinical Molecular Genetics at Henry Ford Hospital, Detroit MI.

**Richard D. Press, MD, PhD**, received his undergraduate degree from Northwestern University and followed with his MD and PhD from Case Western Reserve University. He was a Resident Physician at the University of Pennsylvania as well as a Research Associate with the Wistar Institute. He is currently serving as the Director of the Clinical Molecular Diagnostics and Molecular Pathology Laboratories at the Oregon Health & Sciences University as well as a Professor for the Pathology &

## Speaker Bios

Genetics Departments at OSU. His lab has been an integral part of numerous projects over the past two decades whereby assays for promising molecular biomarkers (primarily for hematologic malignancies) have undergone technical enhancement, and analytical and clinical validation. Outside of the management of his labs, Dr. Press is a member of several committees for the College of American pathologists, Association for Molecular Pathology, Center for Disease Control, and the Molecular & Clinical Genetics Panel.

**Thomas W. Prior, PhD**, is a Professor of Pathology and Neurology, and a Director in the Division of Molecular Pathology at The Ohio State University Medical Center. He joined The Ohio State University faculty as a tenure assistant professor in 1990, after completing post-doctoral training at the University of North Carolina. He has a longstanding research interest in the genetics of neuromuscular disorders, specifically in clinical applications and mutation analysis. He has been most recently involved in the genetic disorder, spinal muscular atrophy (SMA). His laboratory developed the first SMA carrier test and he has been involved in both population carrier and newborn screening projects for SMA. He has been active in determining the role of the SMN2 gene and other gene modifiers in effecting the disease phenotype and the identification of new types of mutations in the spinal muscular atrophy gene and their effect on the disease severity. Over the years the Molecular Pathology Laboratory has also been involved in several research projects and clinical trials including: Muscular Dystrophy Cooperative Research Center (funded by the NIH), several projects funded by the Muscular Dystrophy Association, Clinical Trials for Pediatric Spinal Muscular Atrophy Project (funded by the NIH), Project Cure: SMN2 Copy Number Assay (funded by the Families of SMA), Population Carrier Screening for Spinal Muscular Atrophy (funded by the Claire Altman Heine Foundation) and Incidence and Molecular Screening for Hereditary Cancer (funded by the NIH).

**Colin C. Pritchard, MD, PhD**, is an Associate Professor of Laboratory Medicine, as well as the Associate Director of the Genetics and Solid Tumors Laboratory at the University of Washington Medical Center that services the Seattle Cancer Care Alliance (SCCA). Dr. Pritchard undertook his graduate training at the University of Washington in Seattle and completed his medical training at the University of Washington School of Medicine. The Pritchard laboratory focuses on oncology molecular diagnostics, particularly the source and utility of cell-free nucleic acid biomarkers in blood, and the development of innovative molecular diagnostics for the identification of mutations that can guide therapeutic decision-making. His clinical work focuses on applications of next-generation sequencing gene panels for cancer risk assessment and precision treatment. He has led the development and implementation of the ColoSeq™ Lynch and Polyposis Syndrome Panel and UW-OncoPlex™ Cancer Gene Panel in current clinical use for cancer patients and their families.

### Q

**Andres E. Quesada, MD**, is a molecular genetics fellow at the University of Texas MD Anderson Cancer Center. Dr. Quesada did his undergraduate studies at Rice University, and he received his MD and completed residency training in anatomic and clinical pathology at the University of Texas McGovern medical school at Houston. He completed his hematopathology fellowship training at the University of Texas MD Anderson Cancer Center. Dr. Quesada is board certified in anatomic and clinical pathology and hematology. His interests and research have been predominantly focused on acute myeloid leukemia and the manifestations of specific mutations.

### R

**Heidi L. Rehm, PhD**, is a board-certified clinical laboratory geneticist and genomic medicine researcher. She is the Chief Laboratory Director at the Partners Laboratory for Molecular Medicine (LMM), the Medical Director of the Broad Institute Clinical Research Sequencing Platform and Associate Professor of Pathology at Brigham & Women's Hospital and Harvard Medical School. She is a leader in defining standards for the interpretation of sequence variants and a principal investigator of ClinGen, providing free and publicly accessible resources to support the interpretation of genes and variants. Dr. Rehm also co-leads the Broad Center for Mendelian Genomics with Daniel MacArthur focused on discovering novel rare disease genes and co-leads the Matchmaker Exchange to also aid in rare disease gene discovery. She is a strong advocate and pioneer of open science and data sharing, working to extend these approaches through her role as a member of the steering committee of the Global Alliance for Genomics and Health. Dr. Rehm is also a co-investigator of the BabySeq Project exploring the clinical use of genome sequencing as an adjunct to newborn screening, principal investigator in the eMERGE consortium supporting genomic discovery and genomic medicine implementation research, and a principal investigator on a project to develop i2b2 into a Health Innovation Platform for clinical decision support.

## Speaker Bios

**Tamara Restrepo, BSc, (ASCP)CM**, is the technical supervisor of the Laboratory for Molecular Pediatric Pathology (LaMPP) at Boston Children's Hospital. She received her B.S. degree in Biochemistry and Molecular Biology from the University of California at Santa Cruz. She has broad expertise in molecular diagnostics, including expertise in multiple next-generation sequencing platforms. Prior to working at Boston Children's Hospital, she contributed to the Million Veteran Program at Claritas Genomics and helped to establish their NGS clinical testing workflow. She continues to further her education in Healthcare Management through the Healthcare MBA program at Simmons College.

**Mark Routbort, MD, PhD**, is a practicing molecular pathologist and bioinformatician at the University of Texas MD Anderson Cancer Center, where he develops and supports the computational pipelines for next generation sequencing in the clinical Molecular Diagnostics Laboratory. He is board certified in Anatomic & Clinical Pathology, Hematology, and Clinical Informatics. Receiving a Master's degree in Biochemistry and Molecular Biology from the University of Chicago, and later his MD and PhD degrees at Duke University, he joined the faculty at MD Anderson in 2004, where he has focused his informatics efforts on initiatives directed at improving pathologist and lab workflow, and on improving the generation, storage, reporting, and retrieval of pathology and laboratory data. He currently serves as Director of Computational and Integrational Pathology for the Division of Pathology and Laboratory Medicine, facilitating the transactional and integrational use of genomic data both internally and with large scale multi-institutional collaborations like NCI-MATCH and AACR Project GENIE.

**Somak Roy, MD**, is Assistant Professor of Pathology at the University of Pittsburgh Medical Center (UPMC). He serves as the Director of Molecular Informatics and genetics Services at the Division of Molecular and Genomic Pathology at UPMC. Dr. Roy is a board-certified molecular and anatomic pathologist. His clinical and translational work focuses on the following; 1) Use of modern computational infrastructure and innovative software technology for high-throughput sequence analysis, genomic data visualization, and optimizing molecular laboratory workflow. 2) molecular characterization of urothelial carcinoma to identify clinically relevant, theranostic biomarkers. Since 2014, he has been a member of Informatics Subdivision in the Association of Molecular Pathology (AMP). He served as a representative to the Clinical Practice Committee from 2014-2016 and currently to the Program Committee. Dr. Roy is currently chairing the AMP workgroup that is developing guidelines for validation of clinical NGS bioinformatics pipeline. Dr. Roy completed his medical school training at Seth G.S Medical College, Mumbai followed by pathology residency training at Maulana Azad Medical College, New Delhi. Upon arrival to the United States, he completed anatomic pathology residency from the University of Pittsburgh Medical Center and fellowships in Molecular and Genitourinary Pathology from the same institution.

### S

**Bekim Sadikovic, PhD, DABMG, FACMG**, is a Associate Professor of Pathology and Laboratory Medicine at the Western University, and Head of Molecular Genetics at the London Health Sciences and St Joseph's Healthcare in Ontario Canada. Dr Sadikovic is a diplomate of the American Board of Medical Genetics from Baylor College of Medicine and holds American Board of Medical Genetics certifications in Clinical Molecular Genetics and Clinical Cytogenetics. Prior to his appointment at the Western University, Dr. Sadikovic served as the Head of Advanced Molecular Diagnostics at the McMaster University. Dr. Sadikovic's research interests revolve around application of genomics technologies to clinical diagnostics with particular focus on development of genomic and epigenomic technologies for diagnosis of both germ-line and somatic epi/genetic conditions. His current research specifically focuses on identification of epi/genetic signatures of constitutional genetic and epigenetic syndromes, and development of analytical and bioinformatic approaches for parallel detection of copy number and sequence variations from NGS data. In his clinical role Dr Sadikovic oversees the provincial reference Molecular Genetics laboratory performing constitutional, prenatal, and somatic genomic testing across wide range of genomic disorders in Ontario, Canada.

**Steven A. Schichman, MD, PhD**, is an Associate Professor in the Department of Pathology at the University of Arkansas for Medical Sciences who serves as Assistant Chief for Clinical Pathology, Pathology and Laboratory Medicine Service, at the Central Arkansas Veterans Healthcare System in Little Rock, Arkansas. Dr. Schichman received his medical education at the University of Chicago and completed his PhD thesis work at the California Institute of Technology. He is certified in Hematopathology and Molecular Diagnostics by the American Board of Pathology. Dr. Schichman directs a clinical molecular diagnostics laboratory and a genomics research laboratory at the VA hospital. Active in clinical correlative research, Dr. Schichman has published over 60 research articles and book chapters in areas of molecular genetics including acute leukemia and chronic lymphocytic leukemia. He currently chairs the Pharmacogenetics Subcommittee of the Molecular Genetics Workgroup for the VA National Pathology and Laboratory Medicine program.

## Speaker Bios

**Ryan J. Schmidt, MD, PhD**, is a third-year clinical pathology resident at Brigham and Women's Hospital in Boston, MA and former fellow in the Harvard Molecular Genetic Pathology training program. He received MD and PhD degrees from the University of California, Los Angeles and graduated from the University of Pennsylvania with BA and MS degrees in molecular biology and biochemistry. His long-term interests surround the clinical application of molecular diagnostic and informatic techniques.

**Nikolaus Schultz, PhD**, is an Associate Attending in the Computational Oncology Service in the Department of Epidemiology and Biostatistics at Memorial Sloan Kettering Cancer Center (MSKCC). His research focuses on identifying the genomic alterations that underlie different types of cancer. He is involved in several projects of The Cancer Genome Atlas (TCGA) and is an investigator in the Stand Up To Cancer (SU2C) Prostate Cancer Dream Team. He is also the Head of Knowledge Systems in the Marie-Josée and Henry R. Kravis Center for Molecular Oncology (CMO). Here, he leads the development of the cBioPortal for Cancer Genomics, a popular resource for the visualization and analysis of large-scale cancer genomics data sets, as well as OncoKB, a knowledge base for precision oncology.

**Maryam Shirazi, MD**, is currently a GI/liver pathology fellow at Columbia University Medical Center. She received her MD degree from Tehran University of Medical Sciences and completed her residency in Clinical and Anatomical Pathology at the Department of Pathology and Cell Biology, Columbia University Medical Center.

**Keith E. Simmon, PhD**, obtained a MSc in Cellular and Molecular Biology from the University of West Florida. After graduating Keith join ARUP laboratories as a scientist performing clinical microbiology research and test development. He then joined Isentio and developed software to aide clinical laboratories in interpreting sequence information for microorganism identification. After Isentio, Keith pursued a PhD in Biomedical informatics where he helped to develop a metagenomics analysis platform called Taxonomer. Currently Keith is at ARUP laboratories as Bioinformatics Scientist. His research focuses on to develop developing simple informatics solutions for diagnostics testing.

**Aatur Singhi, MD, PhD**, is an assistant professor of pathology at the University of Pittsburgh Medical Center (UPMC) and within the Division of Gastrointestinal Pathology Center of Excellence. Dr. Singhi graduated from Northwestern University with a BS degree in chemistry and then earned his PhD in molecular genetics from the University of Illinois at Chicago. He received his MD from Case Western Reserve University School of Medicine, followed by residency and fellowship in pathology at Johns Hopkins Hospital. There, he received subspecialty training in pancreaticobiliary and gastrointestinal tract pathology. Dr. Singhi's research interests revolve around the pathology and molecular genetics of pancreatic cancer and precancerous abnormalities, with an emphasis on creating diagnostic tests to aid in classification, prognostication and therapeutics. In collaboration with his colleagues at UPMC, his team has developed a diagnostic platform for the evaluation of fluid and cellular specimens from pancreatic cysts and bile duct fluid for the early detection of pancreaticobiliary cancers.

**Anthony N. Sireci, MD**, is a board certified clinical pathologist and the Physician Manager of the Laboratory of Personalized Genomic Medicine in the Department of Pathology and Cell Biology at Columbia University Medical Center. He received his MD from Johns Hopkins University School of Medicine in Baltimore, Maryland and completed Clinical Pathology Residency training at New York Presbyterian Hospital-Columbia University Medical Center. He has been on the faculty at Columbia since 2011.

**David H. Spencer, MD, PhD**, is an Assistant Professor of Medicine in the Division of Oncology at Washington University School of Medicine, and the Medical Director of the CLIA-Licensed Environment at the McDonnell Genome Institute. Dr. Spencer received his MD and PhD in Genome Sciences from the University of Washington in Seattle, and completed residency training in Clinical Pathology and a Molecular Pathology Fellowship at Washington University in St. Louis. Following his clinical training, Dr. Spencer did post-doctoral research on the genomics and epigenomics of acute myeloid leukemia (AML) in the laboratory of Timothy Ley, MD. Dr. Spencer's research is focused on investigating the epigenetic mechanisms involved in leukemia development, and the use of clinical sequencing for risk stratification and disease monitoring in AML.

**Jeff Stevenson, PhD**, is currently the R&D Senior Scientist for Infectious Disease at ARUP Laboratories in Salt Lake City, Utah. He received bachelor's degrees from the University of Washington in Microbiology and in Medical Technology, and a PhD in Molecular Genetics and Cell Biology from the University of Chicago. He continued his studies as a postdoctoral fellow at the Huntsman Cancer Institute in the field of developmental biology. A current focus of the ID R&D group is applying NGS technology to microbial identification and viral resistance testing.

## Speaker Bios

**Megan Stonebraker, BSc**, is a Staff Scientist at Diatherix Eurofins Clinical Diagnostics. She earned her BS in Biology at the University of Alabama and began her career with Thermo Fisher Scientific designing and developing lentivirus-based ORF expression libraries. Prior to Diatherix, she worked at the Medical Genomics Laboratory at the University of Alabama at Birmingham School of Medicine, a CAP-certified nonprofit clinical laboratory offering comprehensive testing for common and rare genetic disorders. Over the last three years, Megan was the technical lead on a collaborative project with Thermo Fisher Scientific resulting in the successful launch of the ABRx™ Antibiotic Resistance Panel at Diatherix in 2016. Currently, she is working on the expansion of ABRx™ panel content to include additional gene targets. Diatherix is a Frost and Sullivan award winner for Technology Innovation and Leadership of the Year in Molecular Diagnostics in the European Union, as well as a Technology Innovation Award winner for the first commercially available H1N1-09 test performed in a CLIA laboratory.

**Gregory A. Storch, MD**, is the Ruth L. Siteman Professor of Pediatrics and Professor of Medicine and of Molecular Microbiology at Washington University School of Medicine and past chief of the Divisions of Pediatric Infectious Diseases and Pediatric Laboratory Medicine. He received his AB degree from Harvard College and his MD from NYU School of Medicine. He completed internship and residency in internal medicine at the Jewish Hospital of St. Louis, was an Epidemic Intelligence Service Officer for the Centers for Disease Control in the Louisiana Department of Health in New Orleans, and an infectious disease fellow at Washington University. He joined the Washington University faculty in 1981. He is the co-Medical Director of Project ARK, a pediatric HIV service organization affiliated with the Washington University Department of Pediatrics. Storch is past president of the Pan-American Society for Clinical Virology. He currently serves as Chair of the Finance Committee of the Pediatric Infectious Diseases Society, and a member of the Diagnostics Task Force of the Infectious Diseases Society of America. He is also an Associate Editor of the Journal of the Pediatric Infectious Diseases Society. Dr. Storch's research interests are in molecular diagnosis of infectious diseases and infectious disease genomics. He is co-leader of the Microbial Genomics Unit of the Washington University Department of Pediatrics.

**Aijazuddin Syed, MSc**, is currently the lead bioinformatics software engineer at Memorial Sloan Kettering Cancer Center's (MSKCC) clinical bioinformatics group. At MSKCC, he has worked to establish a production scale informatics infrastructure to support large scale clinical grade NGS based molecular assays. He has coauthored original journal publications, and book chapters with emphasis on bioinformatics, informatics, and biomedical informatics. He is profoundly interested in integrating medical, health, and clinical informatics systems. He is currently pursuing a PhD (biomedical informatics) at Rutgers University with a humble desire to bridge the gap between biomedical data and informatics systems and to help better the patient care. His prior work includes, establishing petabyte scale data management and large scale automated analysis workflows at US DOE Lawrence Berkeley National Laboratory. He also is actively a contributing reviewer for various international journals in biomedical and medical informatics.

**Szabolcs Szelinger, PhD**, is currently an American Board of Medical Genetics and Genomics fellow in Clinical Molecular Genetics in the Department of Pathology at the University of California Los Angeles. He obtained his undergraduate and graduate degrees in Molecular and Cellular Biology at Arizona State University. During his studies, Dr Szelinger worked as a Research Associate, and later, as a Staff Scientist in the laboratory of David W. Craig at the Translational Genomics Research Institute (TGEN). In the Craig lab, Dr Szelinger received dual wet-lab/bioinformatics training. His main research projects included the development of multiplexed sequencing approach for next generation sequencing platform, the identification of rare variants' contributions to genetic risk in psychiatric disorders, and the development of integrative analytical approaches for genomic and functional genomic data for the diagnosis of rare, undiagnosed pediatric disorders. His interest is in the improvement of clinical diagnosis by developing methods that integrate high-dimensional data from genomic, expression, and epigenetic assays to guide diagnosis and individualized treatment course in cancer and rare, inherited diseases.

## T

**Amogha Tadimety**, completed her B.S.E at Princeton University in 2014, with a major in Chemical and Biological Engineering and certificates in Engineering Biology and Values & Public Life. During that time she completed research internships at the Weatherall Institute of Molecular Medicine at Oxford University and the Wyss Institute at Harvard. Amogha's undergraduate research work spanned molecular hematology and microfluidics, and she did her senior thesis on organelle assembly and biophysics in the Soft Living Matter Group at Princeton. Amogha is currently pursuing her Ph.D. at Dartmouth College's Thayer School of Engineering in the Zhang Research Group. She is a PhD Innovation Fellow with an interest in technology development and entrepreneurship.

## Speaker Bios

Her research focuses on the development of nanoplasmonic sensors for capture, enrichment, and detection of circulating biomarkers. Amogha's key contribution is in the area of nanoparticle surface assembly and chemical conjugation, with a focus on low-cost nanosensor fabrication integrated with microfluidics. She is currently working on a plasmonic sensor for rapid, label-free detection of circulating tumor DNA from blood samples in pancreatic cancer patients.

**Sir Doug Turnbull, MBBS, MD, PhD**, is a clinical academic who leads a basic science research programme in conjunction with developing clinical services. He has three main roles. Director Wellcome Centre for Mitochondrial Research. The Wellcome Centre is focused on research to improve the lives of patients with mitochondrial disease. Professor Turnbull plays a crucial role in research to identify the genetic defect in patients with mitochondrial disease and his work also focuses understanding the molecular mechanisms underlying the neurological features in patients. With colleagues he is searching for new therapies for patients and actively involved in clinical studies evaluating potential therapies. He has been actively involved in work to prevent the transmission of mitochondrial DNA disease using an IVF technique called mitochondrial donation. Lead for the NHS Highly Specialised Services for Rare Mitochondrial Services for Adults and Children. Professor Turnbull developed this service provides optimum care for patients with mitochondrial disease throughout the UK with Centres in Newcastle, London and Oxford. This service was built on the back of clinical and basic research which Professor Turnbull has pioneered and the service reviews in excess of 800 patients per year. The service has developed care pathways and patient guidance that are used worldwide of the benefit of patients. Director MRC/BBSRC Centre for Ageing and Vitality. Professor Turnbull has a major interest in understanding the basic mechanisms involved in human ageing with particular emphasis on the role of mitochondria. The MRC Centre is focused on understanding how these mechanisms are influenced by lifestyle interventions and studies aimed at promoting healthy ageing.

### V

**Vivianna M. Van Deerlin, MD, PhD**, is a Professor of Pathology and Laboratory Medicine in the Division of Precision and Computational Diagnostics in the Perelman School of Medicine at the University of Pennsylvania (Penn) in Philadelphia, PA where she directs the Molecular Pathology Laboratory and the ACGME-accredited Molecular Genetic Pathology Fellowship program. She received her MD and PhD degrees from Washington University School of Medicine in St. Louis and completed both her residency training in Clinical Pathology and fellowship training in Molecular Pathology at Penn. Dr. Van Deerlin is board-certified in both Clinical Pathology and Molecular Genetic Pathology. Dr. Van Deerlin's research lab in the Penn Center for Neurodegenerative Disease Research is focused on identifying and studying the underlying genetic mechanisms of neurodegenerative disorders, including amyotrophic lateral sclerosis (ALS). She and her research team are actively collecting patient and family member DNA samples to study the genetics of frontotemporal degeneration, Alzheimer disease, Parkinson disease, and ALS. She and her colleagues have identified and characterized both disease-causing mutations and novel risk factors for ALS and FTD. She has used her clinical expertise to facilitate the translation of genetic tests from a research environment into CLIA-certified clinical tests for patient care. Among her accomplishments, Dr. Van Deerlin coordinated a genome-wide association study on a pathologically-defined subset of FTLD which identified a novel risk genetic risk factor for this subtype of FTLD involving 45 centers and 11 countries. In addition, she is an active participant of numerous professional organizations, including the Association for Molecular Pathology, College of American Pathologists, and the American Board of Pathology. Professor of Pathology and Laboratory Medicine and Director of the Clinical Molecular Pathology Laboratory at the Hospital of the University of Pennsylvania (HUP) and Director of the ACGME-accredited Molecular Genetic Pathology fellowship program.

### W

**John S. Welch, MD, PhD**, received his MD/PhD from the University of California at San Diego. He completed his Oncology Fellowship at Washington University in St. Louis, where he is currently an assistant professor of medicine in the Division of Oncology. His clinical focus has been on the care of patients with acute Leukemias. His research has focused on improving patient care through translational and basic science, which includes clinical trials that integrate modern genomics, and bench-top research to understand the leukemogenic function of identified mutations. His genomic work in AML outlined the landscape of mutations and determined that the majority of mutations arise in hematopoietic cells as a normal part of aging. On-going projects are now focused on integrating genomics into clinical trials, identifying mutations associated with clinical response to specific chemotherapies, and determining why AML-associated mutations transform bone marrow cells into leukemia.

## Speaker Bios

**Adam Wilberger, MD**, is an Anatomic and Clinical Pathology resident in the ABP Physician-Scientist Research Pathway at the University of Colorado. After completing a year as chief resident, he is now spending the year in the Colorado Molecular Correlates Laboratory engaging in clinical research and developing assays, especially within molecular hematopathology. His research interests include exploring the use of next-generation sequencing in lymphoid neoplasms. Originally from Pittsburgh, PA, Dr. Wilberger received his B.A. in Psychology from the University of Virginia and his M.D. at Drexel University College of Medicine. He completed his first two years of pathology residency at the Cleveland Clinic before moving to the University of Colorado for the remainder. Next year he will be joining the University of Pittsburgh Medical Center as a fellow in hematopathology.

**P. Mickey Williams, PhD**, is currently serving as a Director of the Molecular Characterization Laboratory at the Frederick National Laboratory for Cancer Research. He received his doctorate from the University of Virginia, and did postdoctoral work at Stanford University. He spent thirteen years at Genentech, where he developed novel assays to support clinical studies and discover new therapeutic targets and contributed to the development of “real-time” PCR technology. Prior to joining CDP in 2010, he was a senior research group leader at Roche Molecular Diagnostics, managing two large multi-national clinical assay studies: The MILE Study (microarray innovations in leukemia) and a collaboration with the LLMP (leukemia and lymphoma molecular profiling project) and also led projects that led to two FDA approved companion diagnostic tests. In his current position he continues to make contributions to the use of molecular technologies for use as clinical assays.

**Christina Wood-Bouwens**, is a research staff member in the Ji Research Group at Stanford University. She received a B.S. in Cellular and Molecular Biology with a minor in Biotechnology from Santa Clara University, and is an expert in digital PCR and next generation sequencing technologies with applications to cancer biology and precision medicine. She is a co-author on many peer reviewed articles in prestigious journals including Nature Biotechnology, Genome Medicine, Nucleic Acids Research, and the Journal of Molecular Diagnostics.

**David Wu, MD, PhD**, is trained in Anatomic Pathology, Hematopathology and Molecular Genetic Pathology at Brigham and Women's Hospital and Harvard Medical School, Boston, MA and currently serve as an Associate Director of the Hematopathology Laboratory at the University of Washington, Seattle. My colleagues and I have been involved with applying and developing novel approaches for molecular diagnostics with an interest and focus in minimal residual disease detection in acute leukemias. Specifically, our group has recently explored the potential for next-generation sequencing of immunoglobulin and T-cell receptor genes to contribute to leukemia detection.

**Xuemei Wu, MD, PhD**, is currently a molecular genetic pathology fellow at Oregon Health & Science University (OHSU), Portland, Oregon. She just completed her residency in anatomic pathology and fellowship in surgical pathology at Mayo Clinic in Rochester, Minnesota, in the summer of 2017. Prior to her residency training, Dr. Wu had studied molecular mechanisms underlying female gametogenesis and early embryo development at Baylor College of Medicine and OHSU. She has published many research articles in major journals, and presented her research in several national and international conferences. Dr. Wu is interested in the development of diagnostic markers and therapeutic targets for solid tumors, with an emphasis on women's health.

CONNECTING YOU TO THE TESTS YOU NEED

POSTER  
INFORMATION

## THE AMP ONLINE TEST DIRECTORY

The AMP Test Directory provides a free, public, and searchable resource of clinical molecular tests in the laboratories of participating AMP members.

*Listing your lab in the directory is a benefit of your AMP Membership!*

The AMP Test Directory allows you to quickly and easily search for tests which help with the diagnosis, prognosis and therapeutic selection for:

- Germline Genomic Disorders
- Hematopathologic Disorders
- Identity Testing
- Other Conditions...
- Infectious Diseases
- Pharmacogenomics
- Solid Tumors

[WWW.AMP.ORG/TESTDIRECTORY](http://WWW.AMP.ORG/TESTDIRECTORY)

"The completely redesigned **AMP Test Directory** features streamlined functionality to add tests as well as new capabilities to add attachments and web links.

This unique resource is a direct benefit for AMP members wishing to promote their test offerings and to all members of the community looking for tests. Add your lab today!"

— **Alexis B. Carter, MD**

AMP Test Directory Editor  
Children's Healthcare of Atlanta

# Comprehensive, flexible, reliable molecular HSV testing

## Simplexa<sup>®</sup> HSV 1 & 2 Direct

- **Comprehensive sample types:**  
For use with both CSF and genital lesion swabs
- **The smallest sample volume:**  
Only 50  $\mu$ L of precious CSF sample
- **Fast and easy:** CLIA Moderate complexity  
with results in about an hour
- **True sample-to-answer workflow:**  
No DNA Extraction

**Currently in Development\***

*Cutaneous and mucocutaneous  
lesion swabs*

\*In the US

# Poster Information

- All posters are on display in the Salt Palace Convention Center, Exhibit Hall, Lower Concourse.
- Poster set-up is Thursday, November 16, 6:30am – 8:00am. All posters must remain on display through 12:30pm, Saturday, November 18.
- Posters are listed in sequence by category and number in the following format:

Poster Number	Abstract Title
---------------	----------------

*First Author's Name*

- Key to poster categories:
- **G** = Genetics    **I** = Informatics  
**H** = Hematopathology    **OTH** = Other  
**ID** = Infectious Diseases    **S** = Solid Tumors  
**TT** = Technical Topics
- All Award Applicant posters display in Poster Number order in the areas of their subject category. They are identified as Award Applicant posters by a card mounted on the poster board.
- All Award Applicants must attend their posters on Thursday, November 16, 2:30pm – 4:15pm for interviews with members of the poster reviewing committees.
- All First/Presenting Authors, including Award Applicants, must attend their posters either Friday afternoon (even-numbered posters) or Saturday morning (odd-numbered posters):
  - o Even-numbered posters must be attended on Friday, November 17, 2:30pm – 3:30pm.
  - o Odd-numbered posters will be attended on Saturday, November 18, 9:45am – 10:45am.
  - o Authors who have more than one even- or odd-numbered poster may either ask another author to attend their additional poster or attend it themselves during the other session. In the latter case, the author should place a note on the poster board alerting attendees that they will attend the poster in the alternate session.
- Poster removal is Saturday, November 18, 12:30pm – 1:30pm. Posters must remain in place until at least 12:30pm. Posters remaining past 1:30pm will be removed and discarded.
- Please note that poster-viewing is not eligible for Continuing Education credit.

## GENETICS

**G01.** Validation of the Ion S5 and Ion Chef for Cystic Fibrosis Mutation Analysis  
*T.R. Sundin*

**G02.** Reinterpreting Previously Reported Genetic Variants is Clinically Significant  
*J.A. SoRelle*

**G03.** Hypertrophic Epicardial Adipose Tissue is a Source of EPAC Proteins Directly Associated to ST2 Production and Heart Dilation and may be a Potential Index of Heart Remodeling in CVDs Patients  
*M.M. Corsi Romanelli*

**G04.** Discovery of a Novel, Accurate Tagging SNP for HLA-B\*15:02 Screening Before Carbamazepine Therapy in the Multiethnic United States Population  
*H. Fang*

**G05.** Spectrum of Mutations in Hbb Gene among Thalassemia Major Patients in a Cohort of Nepalese Population  
*S. Thapa*

**G06.** Custom NGS Panels from Optimized Gene Sets for Inherited Disease Research  
*M. Andersen*

**G07.** WITHDRAWN

**G08.** Comprehensive Carrier Testing of 9,785 Chinese Couples for Common Severe Recessive Disorders  
*S. Zhao*

**G09.** Exome Re-Analysis and Complementary Testing Identify Novel Mutations for Rare Mendelian Disorders  
*C. Wei*

**G10.** Validation of A Cystic Fibrosis 55 Mutation Screening Assay on the QuantStudio 12K Flex Open Array System  
*M.M. Moradian*

**G11.** Linked-Read Sequencing for Molecular Cytogenetics  
*S. Garcia*

**G12.** High Throughput Linked-Read Sequencing for Improved Variant Detection  
*A.N. Fehr*

**G13.** GALC Deletion/Duplication Detection by Droplet Digital PCR for Krabbe Disease Confirmation in a Single Dried Blood Spot Punch  
*R. Majumdar*

**G14.** Pericentromeric Regions of Homozygosity on the X Chromosome are Likely Benign Population Variation  
*E.S. Barrie*

**G15.** Clinical Utility of Next Generation Sequencing (NGS) studies in Neurological Disease – Our Experience at Kokilaben Dhirubhai Ambani Hospital, India  
*J.C. Vyas*

**G16.** Clinical Impact of Characterizing Genomic Alterations Using Whole-Genome Mate Pair Sequencing  
*J. Blommel*

**G17.** Comparison of Specimen Collection Methods for Pharmacogenetic Testing  
*H. Katzov-Eckert*

**G18.** Using the GeneReader NGS System to Identify Mutations in BRCA 1/2, PTEN and TP53  
*N. Dennison*

## Poster Listing

- G19.** Detecting Pharmacogenomic Variants Using Long- and Short-Read Next Generation Sequencing Platforms  
*C.A. Schumacher*
- G20.** Microdeletion in SNRPN May Lead to False Positive Results for Angelman Syndrome Using Methylation Analysis  
*B.M. Zhang*
- G21.** BRCA1 Mutation Detection Using QIAGEN GeneReader NGS System in a Case with RET Codon 634 Mutation  
*B. Sarkadi*
- G22.** Colorectal Cancer Predisposition and its Genetic Characterization of Korean Patients  
*K. Park*
- G23.** Tumor Mutations Can Help Classify Germline Variants: Learning from Mismatch Repair Deficiency  
*B.H. Shirts*
- G24.** Discovery of Unique Disease- and Gene-Specific Peripheral Blood DNA Methylation Signatures Allows Molecular Diagnosis and VUS Classification in Hereditary Genetic Syndromes"  
*B. Sadikovic*
- G25.** Analytical Validation of the Advanta Immuno-Oncology Gene Expression Assay for Profiling of Immunobiology and the Development of Predictive Gene Signatures for Response to Immunotherapies  
*P. Chen*
- G26.** Genome Sequencing Reveals Variants in Non-Coding Regions Cause Hereditary Hemorrhagic Telangiectasia  
*G. Akay Tayfun*
- G27.** Genetic Testing of Noonan Syndrome Using Targeted Next-Generation Sequencing Panel  
*C. Seol*
- G28.** Short Tandem Repeat Analysis Reveals a High Rate of Partial Hydatidiform Moles in Triploid Conceptions Identified by Prenatal Chromosome Microarray  
*X. Wu*
- G29.** Comparison of EUROArray HLA-DQ2/DQ8-h Direct and Olerup SSP for the Determination of Celiac Disease Associated Risk Factors HLA-DQ2.2, -DQ2.5 and -DQ8  
*N. Miron*
- G30.** Improved Screening for Cancer Predisposition Mutations in Patients with Advanced Solid Tumors Enabled by Tumor-Normal Sequencing  
*D. Mandelker*
- G31.** Importance of Whole Exome Sequencing in Solving Complex Phenotypes: A Case Report  
*R.M. Minillo*
- G32.** Automated Reanalysis of Genomic Data: Challenges and the Promise of Novel Diagnoses  
*J. Murrell*
- G33.** Chromosome Anomalies Involving the APC Gene Lead to an Increased Risk for FAP and Developmental Delays  
*B.A. Hilton*
- G34.** Analysis of Cell Pellets Using the Cytoscan Dx Chromosomal Microarray  
*C.J. Broehm*
- G35.** Interindividual Variability of Delta-9-Tetrahydrocannabinol Metabolism by CYP2C9 Polymorphism and Possible CYP3A Inhibitors  
*M. Nakano*
- G36.** An Atypical Presentation of a Homozygous Delta-F508 Mutation  
*O. Rouhi*
- G37.** Expert Review of NGS Results Removes Need for Routine Sanger Sequencing Confirmation  
*D. Muzzey*
- G38.** High Prevalence of Alpha-1 Antitrypsin Z Alleles in Formalin-Fixed Paraffin-Embedded Liver Explant Tissue with PAS-D Globules  
*L. Pac*
- G39.** Clinically Relevant Findings from Pharmacogenomic Testing in >36k Patients Across Multiple Diagnoses  
*J.P. Jarvis*

## Poster Listing

- G40.** Analytical and Clinical Validation of Variants Identified by Exome Sequencing through Secondary Review and Sanger Confirmation in a CLIA-Certified Molecular Laboratory  
*N.T. Strande*
- G41.** The Mother of all Confounders: Strategies to Avoid False Positives Caused by Maternal Copy Number Variants in Noninvasive Prenatal Screening  
*K.E. Kaseniit*
- G42.** The Analysis of Oral Microbiome in CytoScan Assay Performance  
*D. Lizarraga*
- G43.** Second Specimen Testing for TP53 Variants  
*J. Bissonnette*
- G44.** Runs of Homozygosity (ROH) Reveal that Segmental-UPD Occurs as a Result of Recombination Mediated Repair of Genomic Imbalance  
*A.L. Penton*
- G45.** Comparison between Different Activity Score Models for CYP2D6 Phenotype and Frequencies of Actionable Combined Genotypes of CYP2D6 and CYP2C19  
*M. Nakano*
- G46.** Mutation Spectrum of the *KCNQ1*, *KCNH2*, and *SCN5A* Genes for the Long QT Syndrome in Korea  
*M. Kim*
- G47.** Spectrum of *MNX1* Mutations in Korean Patients with Currarino Syndrome  
*S. Lee*
- G48.** WITHDRAWN
- G49.** Genetics Insights into Hereditary Cancer Risk in the Latin American Population  
*A. Leon*
- G50.** Comprehensive Detection of *CFTR* Variants Using Anchored Multiplex PCR and Next-Generation Sequencing  
*M.T. Hardison*

## HEMATOPATHOLOGY

- H01.** Diffuse Large B-Cell Lymphoma Gene Expression Profiling for Cell-of-Origin Determination (Lymph2Cx Testing) Using FFPE Tissue Sections in a Clinical Molecular Diagnostics Laboratory  
*R.S. Robetorye*
- H02.** Performance Evaluation of a T-cell Receptor Gamma Gene Rearrangement (TRG) Next Generation Sequencing (NGS) Assay for Clinical Practice  
*V. Borodin*
- H03.** Minimal Recipient Chimerism Detection by qPCR Method for the Post-Transplant Patients Who Achieved Complete Donor Chimerism by STR Method  
*L. Kumer*
- H04.** Frequency and Pattern of BCR-ABL Kinase Domain Mutation in Chronic Myeloid Leukemia-An Indian Perspective  
*R. Katara*
- H05.** Clinical Validation of a Highly Sensitive and Highly Reproducible BCR-ABL1 Quantification Assay for CML Monitoring  
*M. Alikhan*
- H06.** Comparison of Clonality Testing on B Plus Fixed Versus Formalin Fixed Tissue  
*E. Castro-Echeverry*
- H07.** Detection of Fusion Transcripts in Hematologic Malignancies by RNA-Seq  
*P. Szankasi*
- H08.** Development and Validation of a Multiplex Droplet Digital PCR Assay for the Detection and Quantification of BCR/ABL1 Fusion Transcripts  
*R.Y. Walder*
- H09.** Evaluation of the QIAGEN CALR RGQ PCR Kit for the Detection of CALR Mutations in Suspected Myeloproliferative Neoplasms  
*L.J. Doyle*

*K.E. Halverson*
- H50.** Del(7)(q22) Resulting From an Unbalanced der(7)t(3;7)(q26;q21) Generating a CDK6-MECOM Fusion and FLT3 Alterations in Pediatric Acute Myeloid Leukemia with Myelodysplasia-Related Changes  
*E.M. Azzato*
- H51.** Going Beyond MMR to the Analysis of Deep Molecular Response  
*K. Drafahl*
- H52.** Comprehensive Assessment for Structural Rearrangements Using a Customized Anchored Multiplex PCR-Based Next-Generation Sequencing Assay Targeting 199 Genes  
*A.K. Dupuy*
- H53.** Validation of the LeukoStrat CDx FLT3 Mutation Assay to Detect Internal Tandem Duplication (ITD) and Tyrosine Kinase Domain (TKD) Mutations in 1058 Patients with AML and Response to Midostaurin  
*A. Osgood*
- H54.** Clinical Validation of the Lymph2Cx Assay to Determine the Cell of Origin of DLBCL  
*D. Abdel Azim*
- H55.** BCR-ABL1 Minor Breakpoint (e1a2) Monitoring Using an Analytically Validated Multiplex Assay  
*M. Dodge*
- H56.** Droplet Digital PCR Method for Absolute BCR-ABL1 Major and Minor Transcript Quantification  
*C.A. Schandl*
- H57.** Method Based Validation of 94 Genes Next Generation Sequencing (NGS)-Based Hematologic Malignancy Panel and Confirmation of Variants Using Sanger Sequencing  
*C.S. Sears*
- H58.** Multiple Highly Concordant Assays Facilitate Clinical Analyses of Samples at Different Scales and Sensitivities  
*L.M. Chamberlain*
- H59.** Detection of Rare Variant *NPM1* Transcripts Using an Allele Specific Real-Time qPCR Assay Targeting Mutation Types A, B, and D  
*J.A. Schumacher*
- H60.** Comparison of Clinical Digital Karyotyping by Comprehensive Next Generation Sequencing with Standard Cytogenetic Analysis in Pediatric Leukemia  
*E.M. Azzato*
- H61.** Sequential NGS-Based Multi-Gene Mutational Analysis in *de novo* Acute Myeloid Leukemia with *RUNX1* Mutation  
*R. Luthra*
- H62.** A Case Report of Donor-Derived Clonal Hematopoiesis After Allogeneic Stem Cell Transplantation  
*J. Smith*
- H63.** Acute Promyelocytic Leukemia with Atypical Karyotype and *FLT3* ITD Mutation is Associated with Inferior Clinical Outcome  
*A. Idrees*
- H64.** High Frequency of *MYD88* L265P Mutation in Ocular Adnexal Marginal Zone Lymphomas and Its Clinical Correlates  
*A. Behdad*
- H65.** A Balanced Formulation of Dimethyl Sulfoxide and Bovine Serum Albumin Provides Highly Uniform Coverage of *CEBPA* in a Droplet PCR-Based NGS Panel  
*S. Mallampati*
- H66.** Next Generation Sequencing-Based Heme Panel Testing for Myeloid Neoplasms at a Tertiary Care Hospital and Cancer Center  
*K. Shah*
- H67.** Subclonal *CEBPA* Mutations Identified by Deep Sequencing Using a Clinically Validated Deep Sequencing Assay in Acute Myeloid Leukemia  
*S. Png*

## Poster Listing

**H68.** Diagnostic Yield of Somatic Mutation Detection in Hematologic Malignancies Does Not Increase with Additional Mutation Analysis, and Supports More Focused Disease-Specific Testing Models  
*S. Szelinger*

**H69.** The Utility of SNP-Array Analysis in the Detection of 1p36 Abnormality in t(14;18)-Negative Follicular Lymphoma  
*L. Wang*

**H70.** Next Generation Sequencing Targeting IGH Demonstrates Clinical Utility in Detection of B-Cell Clonality in Non-Hodgkin Lymphomas  
*B. Tandon*

**H71.** JAK2-Negative Refractory Anemia with Ring Sideroblasts Associated with Marked Thrombocytosis (RARS-T) Occurs More Commonly in Women  
*M. Hussaini*

**H72.** Next Generation Sequencing Studies in Early Myeloid Neoplasms  
*C. Soderquist*

**H73.** Correlation of Mutational Burden Detected by Targeted Next-Generation Sequencing with Pathological Disease Burden in Hematological Malignancies.  
*S.L. Kang*

**H74.** Unique 9q34 Rearrangements in T-ALL: Elucidation and Characterization by Microarray Analysis, RNA Sequencing and FISH  
*J. Tepperberg*

**H75.** Comparative Study of the Panel Based Validation with Method Based Validation in Myeloid Panel  
*R. Wu*

### INFECTIOUS DISEASES

**ID01.** Evaluation of Cepheid Xpert HIV-1 Qual Assay in Whole Blood for Diagnosis of HIV-1 Infection  
*S. Lim*

**ID02.** Pathogen Detection by Metagenomic Next Generation Sequencing of Purulent Body Fluids  
*W. Gu*

**ID03.** Utilization of a Cost-effective High-Throughput Sequencing Approach for Comprehensive Metagenomic Surveillance of Viral Pathogens in Respiratory Specimens  
*S. Png*

**ID04.** Analytical Validation of an Analyte Specific Reagent (ASR) for *Mycoplasma genitalium* Detection and Point Prevalence Assessment  
*S. McClellan*

**ID05.** Evaluation of RealStar Pneumocystis Jirovecii PCR Kit 1.0 for Qualitative Detection of *Pneumocystis jirovecii* Pneumonia (PCP) Specific DNA in Respiratory Sample Types  
*K. Rottengatter*

**ID06.** Evaluation of RealStar *Bordetella pertussis* PCR Kit 1.0 for Qualitative Detection and Differentiation of *Bordetella pertussis* and *Bordetella parapertussis* Specific DNA in Respiratory Samples  
*K. Rottengatter*

**ID07.** Development of a Quantitative BK Virus PCR Assay on the Luminex ARIES Molecular Diagnostics Platform  
*T. Her*

**ID08.** Development of a Panfungal Next Generation Sequencing Assay  
*K.D. Tardif*

**ID09.** Next Generation Nucleic Acid Extraction System: NucliSens eMAG  
*A.M. McClernon*

**ID10.** HPV: The Use of Full Process Controls to Monitor Extraction Variation  
*A. Ricketts*

**ID11.** Detection of *Borrelia burgdorferi* DNA by Loop Mediated Isothermal Amplification (LAMP) in Pediatric Synovial Fluids  
*R.V. Ponaka*

## Poster Listing

- ID12.** ITS1 (Internal Transcribed Spacer) Primer Binding Site Polymorphism in Clinical Fungal Isolates  
*J.F. Mele*

## Poster Listing

- ID73.** Concordance of *C. difficile* Detection by Use of a Multiplex Molecular Panel with a Singleplex, Diagnostic Assay  
*T. Hall*
- ID74.** Detection of Resistance-Associated Substitutions in the Hepatitis C Viral Genome Using the Sentosa SQ Hepatitis C Virus Genotyping Next-Generation Sequencing Assay  
*M. Campan*
- ID75.** Comparative Evaluation of the Omniplex-HPV and RFMP HPV PapilloTyper for the Detecting of Human Papillomavirus Genotypes in Cervical Specimen  
*Y. Yoon, Y. Choi*
- ID76.** A Clinical Performance Evaluation of QPLEX STI Detection Kit  
*S. Cho*
- ID77.** Comparison of the Hologic Panther Fusion Respiratory Assays to BioFire FilmArray Respiratory Panel for Detection of Respiratory Viruses in Children  
*A. Lebe*
- ID78.** Stability of Zika Virus and Recombinant Zika Controls  
*H. Greiss*
- ID79.** Evaluation of Cross Reactivity and Inhibitory Effects of Sexually Transmitted and Mosquito Borne Pathogens on Zika Testing Using Aptima Zika Virus Assay on the Fully Automated Panther System  
*H. Greiss*
- ID80.** Evaluation of the Abbott Real-Time RT-PCR EBV Assay for EBV Detection and Quantification  
*M. Yoon*
- ID81.** Performance of the Hologic GBS Assay on the Fully Automated Panther Fusion System  
*C. Hentzen*
- ID82.** HPV Genotypes in Precancerous Lesions and Cervical Cancer of Korean Women  
*E. Lee*

## INFORMATICS

- I01.** An End-to-End Bioinformatics Pipeline Optimized for Somatic Variant Analysis Returns Clinically Actionable Results with a Rapid Turnaround Time  
*R. Kamal*
- I02.** Informatics to Illuminate Real-World Genetic Test Ordering Practices at a Large Academic Institution  
*V.A. Arboleda*
- I03.** Real-Time Thermodynamics and Local Variant Display for Primer Selection  
*Z.L. Dwight*
- I04.** Cloud-Based Somatic Pipeline Development and Validation for Clinical Somatic Variant Detection, Including Large Indels, from Targeted Panels  
*A. Bolia*
- I05.** A Computational Framework for Large-Scale Analysis of TCR $\beta$  Immune Repertoire Sequencing Data on Cloud-Based Infrastructure  
*L. Lin*
- I06.** A New Allele-Centric VCF File for Variants in ClinVar  
*M.J. Landrum*
- I07.** Custom-Built Heuristic Approach to Variant Calling Tools Development  
*D. Thakral*
- I08.** Advancing Genomic Knowledge Curation: Piloting the Use of Enhanced Literature Curation Tools  
*R.J. Schmidt*
- I09.** Repository of Quality Control and Metrics: A Web-Browser Based Application for Review and Approval of Clinical NGS Quality Metrics  
*L.M. Peterson*
- I10.** Improving Quality Control of Gene Amplification (GA) Detection in an Amplicon-Based Next-Generation Sequencing (NGS) Cancer Gene Panel by Implementing Gene-Level Segment Visualizations  
*Y. Lo*

## Poster Listing

- 111.** Establishing Seamless Electronic Connectivity, an Underestimated Exercise for Instituting a High Quality Genomic Medicine Service  
*N. Sidiropoulos*
- 112.** Comparison of an Automated Approach to Mining the Genomic Literature Against COSMIC, a Manually Curated Database  
*M. Kiel*
- 113.** Overlapping Variants Can Lead to Potential for Missed Calls in Custom Next Generation Sequencing Bioinformatics Pipeline  
*C. Vanderbilt*
- 114.** Evaluation of Structural Variant Callers from a Clinical Perspective  
*C.P. Johnson*
- 115.** Transmission of North American Association of Central Cancer Registries (NAACCR) Data Using the Lung Biomarker Template from the College of American Pathologists (CAP)  
*K.I. Hulkower*
- 116.** Homopolymer Compression Improves Reference-Free, Kmer Based Whole Genome Strain Comparison for Ion Torrent Data  
*K.E. Simmon*
- 117.** Bioinformatics Assay Design for Development of Multiplex PCR-Based Next Generation Sequencing Panels  
*D. Wang*
- 118.** An Open Software Ecosystem for High Throughput Clinical Diagnostics  
*K.D. Doig*
- 119.** NeGeSel – An All-Purpose Decision Support Tool for the Clinical Management of Next Generation Sequencing Assays in the Clinical Laboratory  
*V. Williamson*
- 120.** Redesigning the Molecular Pathology Clinical Report for the Next-Generation Genomic Era: The MSKCC Experience with the MSK-IMPACT Assay  
*A. Syed*
- 121.** In-Silico Framework for Detection and Evaluation of Contamination in Clinical Diagnostic Next-Generation Sequencing  
*M. Sarmady*
- 122.** HLA on FHIR in the Cloud to Facilitate Entry in Electronic Medical Records  
*Y.S. Wang*
- 123.** High-Throughput, Low-Pass Whole-Genome Sequencing (LP-WGS) Method for Single-Cell Copy-Number (CN) Profiling on Ampli1 Whole-Genome Amplification (WGA) Products for Illumina Platform  
*N. Manaresi*
- 124.** Breaking the Turnaround Time Barrier in Next Generation Sequencing-Based Clinical Mutation Profiling Using an Integrated Workflow and Informatics Approach  
*R. Ruiz-Cordero*
- 125.** Vetting Targeted Capture Probe Design with a Computational Strategy Combining KmerSniper and BLAT  
*A.E. Kellogg*
- 126.** A Novel Automated Approach to Identifying Disease-Gene-Variant Associations from the Medical Literature to Inform Gene Panel Design  
*M. Kiel*
- 127.** Creating Custom Gene Panels for Next-Generation Sequencing: Optimization of 5000 Gene Assays, Selection by Disease Research Area and Integrated Analysis for Variant Prioritization  
*F. Hyland*
- 128.** An Interlaboratory Assessment of Complex Variant Detection Using Multiplexed Positive Controls  
*S. Lincoln*
- 129.** Estimating Mutation Load from Tumor Research Sample Using Targeted Next-Generation Sequencing Assay at  $\geq 5\%$  Allelic Frequency  
*R. Chaudhary*

*R.N. Woodward*
- 153.** Genotype Matching of Serially Collected Clinical Samples Using Next Generation Sequencing Can Identify Sample Handling Errors  
*M. Grskovic*
- 154.** Using Replication to Break the NGS Noise Floor for Liquid Biopsy Variant Detection  
*C. Ionescu-Zanetti*

### OTHER (EDUCATION, ETC.)

- OTH01.** Optimizing Somatic Genomic Reporting and Physician Interpretation with Web-Based, Interactive Reports  
*S.W. Gray*
- OTH02.** Good or Bad Sequencing Data? Setting a Benchmark for the Quality of Diagnostic NGS in the Lab  
*W. Gutowska-Ding*
- OTH03.** Liquid Biopsy Based Monitoring of PD-L1 Expression in Non-Small Cell Lung Cancer (NSCLC) Patients for Immunotherapy  
*G. Singh*
- OTH04.** Improved Polymer Enhanced Detection of Nucleic and Amino Acid Targets  
*J. Klonoski*
- OTH05.** A NGS Library Preparation Training Module Facilitating Rapid Orientation and Productivity of New Employees in a Clinical NGS Core Laboratory  
*S. Henke*

- OTH06.** Interactive Online Lymphoma Unknown Conference: An Instructive Platform for Ordering Flow Cytometry and Molecular Studies  
*S.E. Harley*

- OTH07.** Long QT Syndrome: Integrating Genetic Testing into a Diagnostic Work Flow: A Process to Identify Opportunities and Gaps  
*E.R. Lockhart*

- OTH08.** The Northern New England Genomics Consortium  
*N. Sidiropoulos*

- OTH09.** Time-Resource Analysis for Right-Sizing an NGS Laboratory: Exercising Restraint, Building Responsibly  
*J.R. Milano*

- OTH10.** Characterization of BCR-ABL Laboratory Ordering for Quality Improvement  
*W. Zheng*

### SOLID TUMORS

- ST01.** Improvement in Diagnostic Laboratory Performance by Participation in External Quality Assessment for Molecular Pathology: Lessons Learned and the Need for Continued Quality Improvement  
*M.H. Cheetham*
- ST02.** APC and KRAS Genetic Variants Associated with Colorectal Cancer Histology Grade and Tumor Staging  
*W. Zhang*
- ST03.** WITHDRAWN
- ST04.** Development and Validation of ColoScape – A New Colorectal Cancer Mutation Detection Assay  
*M.J. Powell*
- ST05.** Detection of Microsatellite Instability in Circulating Cell-Free DNA of Patients with Colorectal Carcinoma  
*J. Pettersson*

## Poster Listing

- ST06.** Lung and Colon Adenocarcinoma Mutational Landscape in a Tertiary Academic Healthcare Center  
*O.C. Rafael-Rosca*
- ST07.** A Verification Study of the GeneReader NGS System in a Routine Laboratory Setting  
*A. Boesl*
- ST08.** Detection of *MLH1* Promoter Methylation by MassARRAY MALDI-TOF  
*A.A. Hall*
- ST09.** Molecular and Clinicopathologic Features Associated with PD-L1 Expression in Lung Adenocarcinoma  
*S. Yang*
- ST10.** Evaluation of NGS Based Methods to Detect the Recurrent Gene Arrangements in Lung Cancer  
*A. Tilak*
- ST11.** Assessment of UltraSEEK Colon Cancer Panel for Detection of Low Frequency Somatic Mutations in Blood  
*R. Avula*
- ST12.** Validation of a Neuro-Oncology Next Generation Sequencing 50-Gene Panel  
*E. Barr Fritcher*
- ST13.** Performance Comparison of Two AR-V7 Detection Methods Confirms That Unexpected Responses to Abiraterone/Enzalutamide in AR-V7 Positive Patients are Not Due to Assay Differences  
*C. Bernemann*
- ST14.** Spectrum of Mutations in Metastatic Chondrosarcomas Identified by Clinical Targeted Next-Generation Sequencing  
*P.J. Lee*
- ST15.** Intratumoral Heterogeneity is the Single Source of Assay Variability During Laboratory Verification of the Prosigna Assay  
*A. Nelson*
- ST16.** Relationship Between Forkhead Box M1 Gene Expression, *KRAS* Mutation Status and Standard Uptake Value (SUV) of Positron Emission Tomography (PET) in Non-Small Cell Lung Cancer (NSCLC)  
*W. Mahmud*
- ST17.** Comparing Pyrosequencing and MALDI-TOF Mass Spectrometry to Methylation-Specific qPCR for Quantifying MGMT Promoter Methylation  
*R.L. Margraf*
- ST18.** Implementation of Rapid Blood-Based Mutation Testing for Patients with Lung Cancer  
*T.A. Boyle*
- ST19.** A Comparison of Mutation Frequencies Observed in Non-Small Cell Lung Cancer (NSCLC) Patients by Two Different Methods: SNaPshot and Polymerase Chain Reaction (PCR) Versus Next-Generation Sequencing (NGS)  
*M. Goudie*
- ST20.** Comparison of the Clinical Utility of Microsatellite Instability Detection Approach between a Novel NGS Based Algorithm and Traditional PCR Method  
*C. Wang*
- ST21.** Development and Evaluation of a Pan-Sarcoma Fusion Gene Detection Assay Using the NanoString nCounter Platform  
*K.T. Chang*
- ST22.** Genome-Wide Copy Number Variation and Targeted Next-Generation Sequencing Studies of Merkel Cell Carcinoma  
*M. Carter*
- ST23.** Study of TMPRSS2-ERG Molecular Translocation in Prostate Cancer and its Correlation with Clinical and Histopathological Parameters  
*S. Desai*
- ST24.** A Rare Case of HER2 Amplified Invasive Ductal Breast Carcinoma with Pericentric Deletion of Chromosome 17  
*B.S. Karir*

## Poster Listing

- ST25.** Biallelic TP53 Gain of Function Mutations in Rapid Progressing Solid Tumors and Correlating Immunohistochemistry  
*C.M. Sande*
- ST26.** 1p Deletion, The Most Common Subtype of Leiomyomas Encountered in NIPT?  
*M. Van Ness*
- ST27.** A Novel Non-Invasive Bladder Cancer Recurrence Surveillance Test Using Urine Sample  
*P. Piatti*
- ST28.** Ultra-Sensitive Tag Sequencing for Detection of Low Level Somatic Alterations in Plasma Cell Free DNA of Metastatic Colorectal Tumors on Ion S5XL Platform  
*M. Mehrotra*
- ST29.** Effect of Blood Collection Tubes on Circulating Tumor DNA (ctDNA) Yield and Specificity  
*D. Murray*

**ST111.** Evaluation of a Custom-Design Targeted Next-Generation Sequencing (NGS) Panel for Clinical Screening of Mutations, Copy Number Alterations, and Gene Fusions in Primary CNS Tumors

*L. Xi*

**ST112.** Overcoming Challenges in Copy Number Estimation from Whole Exome Sequencing in Tumors

*S. Anderson*

**ST113.** Splicing Site Mutation in *MET* Gene Potentially Associated with Exon 14 Skipping Detected by DNA-Based Next Generation Sequencing in Lung Adenocarcinoma

*O. Rouhi*

**ST114.** Identification of Germline Variants in Tumor Genomic Sequencing Assays: Usefulness of Variant Allele Fraction and Population Variant Databases

*N.D. Montgomery*

**ST115.** An Efficient and Ultrasensitive Next-Generation Sequencing Solution for Profiling Circulating Tumor DNA

*B.C. Haynes*

**ST116.** Validation of Whole Exome and Whole Transcriptome Sequencing of FFPE Derivatives on Illumina Platforms

*S.A. Shurtleff*

**ST117.** Increased Incidence of *PIK3CA* Variants in Triple Negative Breast Carcinomas with Apocrine Features Identified by Targeted NGS

*J.E. Baum*

**ST118.** Molecular Analysis of Lymphoepithelioma-Like carcinoma (LELCA) of the Thymus

*S. Rosati*

**ST119.** Clinical Utility of Fusion Genes in Solid Tumors - A Single Center Experience

*P. Selvam*

**ST120.** Using Liquid Biopsies for Low Frequency Variant Detection and Tissue-of-Origin Exploration

*A. McUsic*

**ST121.** Evaluation of a NanoString nCounter Custom Expression Panel for Hepatoblastoma Risk Stratification

*S.F. Sarabia*

**ST122.** Enhanced Genome-Wide Copy Number Variation Detection Using a SNP-Focused Targeted NGS Panel for Tumor Analysis

*J. Wang*

# Notes

# Innovation Spotlight Stage

The Innovation Spotlight Stage is a unique opportunity for exhibiting companies to promote a new product or service at the AMP 2017 Annual Meeting. The Innovation Spotlight Stage is located in the back left corner of the Exhibit Hall. Innovation Spotlights are open to all Meeting Registrants and seating will be on a first come, first serve basis.

## THURSDAY, NOVEMBER 16, 2017

### Diagnostic Testing in Metastatic Non-Small Cell Lung Cancer

*Time: 12:00pm - 12:45pm*

*Hosted by: Astrazeneca*

The program focuses on the importance of quality biomarker testing practices for patients with NSCLC, highlighting the importance of proactive coordination among the multidisciplinary team to ensure appropriate therapy choices. The rationales for EGFR mutational analysis and PD-L1 testing will be explored.

## FRIDAY, NOVEMBER 17, 2017

### Current and Emerging Biomarkers in Immuno-Oncology

*Time: 12:00pm - 12:45pm*

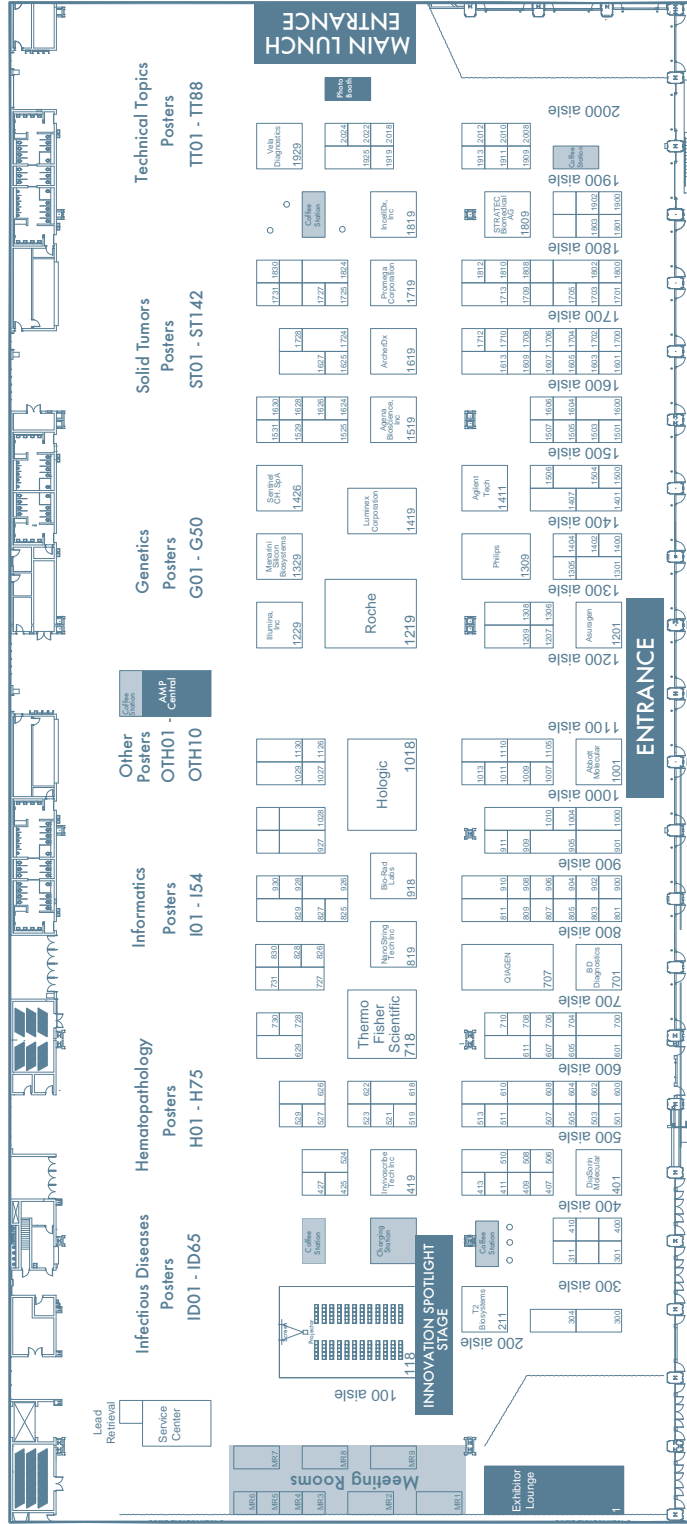

*Hosted by: Bristol-Myers Squibb Company*

Many biomarkers are being investigated to further our understanding of cancer biology and the intersection with the immune system. This research is driving exploration of the potential to predict response to cancer immunotherapy. At this symposium, we will explore the rapidly evolving field of biomarker research and the impact on testing practices. Join us to gain insight into current and emerging immuno-oncology biomarkers in conjunction with associated technological advancements.

# Exhibit Hall Floor Plan

## AMP NOVEMBER 15 - 18, 2017 SALT PALACE CONVENTION CENTER HALLS A - D SALT LAKE CITY, UTAH

\*This floor plan is subject to fire marshal approval.  
AS OF 10-19-2017

# AMP CENTRAL

Visit the AMP Central booth in the Exhibit Hall,  
located in the middle of the Poster section!  
Exciting opportunities at AMP Central include:

- **Career Networking Mixers**

The AMP Membership Affairs Committee is hosting individual networking events geared towards Technologists, Trainee/Early Career attendees, and Mid-Career professionals. This is an opportunity to discuss your career with peers and experienced professionals working in the field.

- **AMP Committee Meet & Greets**

Representatives from various AMP committees will be available to answer questions about the important work they do and how to get more involved in AMP!

- **Opening Reception #Tweetup!**

Meet other molecular pathologists using Twitter to advance the field and connect with other biomedical professionals both during the meeting and throughout the year. Make sure to use the hashtags #AMP2017 and #AMPlifier to get all the latest updates!

- **Job Listings**

View/Post Employment Opportunities

**AMP Central is the place to be if you are an AMP Member or an attendee interested in learning more about all AMP has to offer!**

## **Thursday, November 16**

**11:45am - 1:00pm**

**Meet & Greets:** Publications & Communication Committee; Nominating Committee

**2:30pm - 4:15pm**

**Career Networking Mixer:** Technologists

**Meet & Greet:** Subdivision Leadership

**5:45pm - 7:00pm**

**Tweetup!**

## **Friday, November 17**

**9:45am - 10:45am**

**Meet & Greets:** Economic Affairs Committee; Professional Relations Committee

**11:45am - 1:00pm**

**Career Networking Mixer:** Trainee/Early Career

**Meet & Greets:** Training & Education Committee; Awards Committee

**2:30pm - 3:30pm**

**Career Networking Mixer:** Mid-Career Professionals

**Meet & Greet:** Membership Affairs Committee

## **Saturday, November 18**

**9:45am - 10:45am**

**Meet & Greet:** Clinical Practice Committee

**12:15pm - 1:30pm**

**Meet & Greet:** International Affairs Committee

## A2LA

Booth #: 2022

*5202 Presidents Court, Suite 220  
Frederick, MD 21703  
United States  
(301) 644-3248 ext. 221  
tradeshows@A2LA.org  
a2la.org*

A2LA is a non-profit, multi-discipline accreditation body with almost 40 years of experience providing internationally-recognized accreditation services and training. A2LA's accreditation services encompass testing and calibration laboratories, clinical testing laboratories, inspection bodies, proficiency testing providers, reference material producers and product certification bodies. Organizations are accredited to international standards and field-specific requirements. A2LA offers training programs to complement its accreditation offerings.

### PRODUCT CATEGORIES

**Testing Categories & Services:** Reference laboratory testing services; Reference materials/standards/QC or QA products

**Other:** Professional Organizations/Associations

## CORPORATE PARTNER

## Abbott Molecular

Booth #: 1001

*1300 East Touhy  
Des Plaines, IL 60018  
United States  
customerservice@abbottmolecular.com  
abbott.com*

Abbott Molecular is a leader in molecular diagnostics – the analysis of DNA and RNA at the molecular level. Abbott Molecular's tests can also detect subtle but key changes in patients' genes and chromosomes and have the potential to aid with early detection or diagnosis, can influence the selection of appropriate therapies and may assist with monitoring of disease progression.

### PRODUCT CATEGORIES

**Testing Categories & Services:** Infectious Diseases; Leukemias and Lymphomas; Solid Tumors

**Technologies:** FISH/ISH; DNA/RNA sample collection and/or preparation

## Abbvie Inc.

Booth #: 1007

*1 North Waukegan Road, ABV1-1NE  
North Chicago, IL 60064  
United States  
xyz@abbvie.com*

AbbVie is a global, research-based biopharmaceutical company formed in 2013 following separation from Abbott Laboratories. The company's mission is to use its expertise, dedicated people and unique approach to innovation to develop and market advanced therapies that address some of the world's most complex and serious diseases.

## Exhibitor Company Descriptions

### AccuRef Diagnostics

Booth #: 904  
521 Cottonwood Drive Suite 111  
Milpitas, CA 95035  
United States  
(408) 773-8007  
maki.ogawa@appliedstemcell.com  
www.appliedstemcell.com

AccuRef Diagnostics employs the most advanced genome editing technologies for the generation of molecular and cellular reference standards used by translational genomics researchers and clinical labs. Our ONCORE™ product line, offers the largest off-the-shelf reference standard library on the market. In addition, we offer custom services and co-develop custom reference standards solutions for our diagnostic partners.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Pharmacogenetics/genomics; Reference laboratory testing services; Reference materials/standards/QC or QA products; Gene expression profiling

**Technologies:** Next Generation Sequencing; Microarrays; FISH/ISH; Sequencing; IHC; DNA/RNA sample collection and/or preparation; Mutation/variant detection; Microscopy; Cell free plasma DNA analysis (cfDNA); Circulating tumor cell analysis (CTC)

### Adaptive Biotechnologies Corp.

Booth #: 1126  
1551 Eastlake Avenue East, Suite 200  
Seattle, WA 98102  
United States  
(206) 659-0067  
info@adaptivebiotech.com  
www.adaptivebiotech.com

Adaptive is the leader in combining high-throughput sequencing and expert bioinformatics to profile T- and B-cell receptors. Adaptive brings its accurate and sensitive immunosequencing platform into laboratories worldwide to drive groundbreaking research in immune-mediated diseases. Adaptive also translates immunosequencing discoveries into clinical diagnostics and therapeutic development to improve patient care.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Leukemias and Lymphomas; Solid Tumors

**Technologies:** Next Generation Sequencing

### Admera Health

Booth #: 1601  
126 Corporate Blvd.  
South Plainfield, NJ 07080  
United States  
(908) 222-0533  
jeff.mitchell@admerahealth.com  
www.admerahealth.com

Admera Health is a CLIA certified CAP accredited laboratory, utilizing Next-Generation Sequencing technology to advance the field of personalized medicine. Our expertise includes pharmacogenomics, cardiovascular disease, and non-invasive cancer screening. Diagnostic test results are delivered to physicians and patients in a distilled and manageable report, giving them the relevant information to make more informed treatment decisions.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Inherited Conditions; Solid Tumors; Pharmacogenetics/genomics; Gene expression profiling

**Technologies:** Next Generation Sequencing; Circulating tumor cell analysis (CTC)

### Advanced Analytical Technologies

Booth #: 413

www.genomeweb.com

GenomeWeb is an independent online news organization based in New York. Our editorial mission is to cover the scientific and economic ecosystem spurred by the advent of high-throughput genome sequencing. We operate the largest online newsroom focused on advanced molecular research tools in order to provide our readers with exclusive news and in-depth analysis of this rapidly evolving market.

### GenomOncology

Booth #: 1110

1375 East 9th Street, Suite 1120

Cleveland, OH 44114

United States

(440) 617-6087

[Baiju@genomoncology.com](mailto:Baiju@genomoncology.com)

[www.GenomOncology.com](http://www.GenomOncology.com)

GenomOncology is a healthcare technology company enabling precision medicine by transforming genomic data into actionable information.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Solid Tumors;

Clinical informatics/Bioinformatics

**Technologies:** Next Generation Sequencing;

Microarrays; FISH/ISH; Sequencing; Bioinformatics;

Digital PCR (cPCR)/PCR/qPCR/ Probes and Primers;

IHC; Mutation/variant detection

### Genoptix Medical Laboratory

Booth #: 1800

1811 Aston Avenue

Carlsbad, CA 92008

United States

(800) 755-1605

[radams@genoptix.com](mailto:radams@genoptix.com)

[www.genoptix.com](http://www.genoptix.com)

At Genoptix, we specialize in oncology diagnostics and informatics services. As one of the largest hematopathology centers in the U.S., we provide community oncologists and pathologists with comprehensive testing solutions in hematology and solid tumor molecular profiling. With reliable and clinically actionable reports, we empower clinicians to make more informed decisions and provide better patient care.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Leukemias

and Lymphomas; Reference laboratory testing

services; Clinical informatics/Bioinformatics; Gene expression profiling

**Technologies:** Next Generation Sequencing;

FISH/ISH; Sequencing; Bioinformatics; Laboratory

Information Systems; Digital PCR (cPCR)/PCR/

qPCR/ Probes and Primers; IHC; DNA/RNA sample

collection and/or preparation

### Genotech Matrix

Booth #: 409

555 Long Wharf Drive, 11th Floor

New Haven, CT 06511

United States

(646) 418-6306

[mtobin@genotechmatrix.com](mailto:mtobin@genotechmatrix.com)

[www.genotechmatrix.com](http://www.genotechmatrix.com)

Genotech Matrix, a New Haven, CT based healthcare technology company, is focused on delivering superior bioinformatics and precision medicine solutions, including locally integrated knowledgebases, that provide accurate, efficient and cost-effective results to biotechnology, hospital and pharmaceutical industries to improve the health of patients worldwide.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Inherited

Conditions; Infectious Diseases; Leukemias and

Lymphomas; Solid Tumors; Pharmacogenetics/

genomics; Clinical informatics/Bioinformatics; Gene

expression profiling

**Technologies:** Next Generation Sequencing;

Bioinformatics; Digital PCR (cPCR)/PCR/qPCR/

Probes and Primers; DNA/RNA sample collection

and/or preparation; Mutation/variant detection;

Mass Spectrometry; Single Cell Analysis

### GenPath Diagnostics, BioReference Laboratories

Booth #: 524

481 Edward H. Ross Drive

Elmwood Park, NJ 07407

United States

(800) 229-5227 ext. 8205

[msansing@bioreference.com](mailto:msansing@bioreference.com)

[www.genpathdiagnostics.com](http://www.genpathdiagnostics.com)

GenPath, a CLIA and CAP certified national oncology laboratory, offers unmatched expertise and a comprehensive test menu. From routine clinical to advanced genomic testing for tumor sequencing and hereditary cancers, the full testing spectrum for cancer patients is covered. GenPath is a division of BioReference Laboratories, an OPKO Health Company.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Leukemias and

Lymphomas; Solid Tumors; Reference laboratory

testing services

**Technologies:** Microarrays; FISH/ISH; Sequencing;

Mutation/variant detection

NanoString® Technologies provides life science tools for translational research and molecular diagnostic products. The Company's proprietary nCounter® Analysis System offers simultaneous analysis of RNA, DNA, and protein expression with high sensitivity and precision. NanoString collaborates with multiple biopharmaceutical companies in the development of companion diagnostic tests for various cancer therapies, helping to realize the promise of precision oncology.

info@scienion.us  
www.scienion.com

SCIENION offers complete solutions for precise non-concat liquid dispensing applications, multiplex assays and high throughput production of multiparameter assays in diagnostics, life and material sciences. Our single cell dispensing technology is unique in enabling very high cell recovery and viability rates from extremely small sample volumes.

#### **PRODUCT CATEGORIES**

**Testing Categories & Services:** Gene expression profiling

**Technologies:** Microarrays; DNA/RNA sample collection and/or preparation; Single Cell Analysis

## Exhibitor Company Descriptions

### Siemens

Booth #: 905  
511 Benedict Avenue  
Tarrytown, NY 10591  
United States  
(914) 631-8000  
kaiyane.bynoe@siemens.com  
www.siemens.com/healthineers

Siemens Healthineers is committed to becoming the trusted partner of healthcare providers worldwide, enabling them to improve patient outcomes while reducing costs. Driven by our long legacy of engineering excellence and our pioneering approach to developing the latest advancements, we are a global leader in medical imaging, laboratory diagnostics, clinical IT, and services.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Infectious Diseases; Reference laboratory testing services

### SmartGene

Booth #: 1529  
P O Box 99543  
Raleigh, NC 27624-9543  
United States  
(919) 844-6145  
dellis@smartgene.com  
www.smartgene.com

SmartGene is a bio-informatics application service provider (ASP), delivering secure, integrated, software solutions for the analysis, interpretation and data management of genetic sequences. SmartGene provides specific medical, clinical research and epidemiological surveillance applications, focusing on the rapid identification, typing and analysis of pathogens.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Inherited Conditions; Infectious Diseases; Clinical informatics/ Bioinformatics

**Technologies:** Next Generation Sequencing; Sequencing; Bioinformatics

### SoftGenetics, LLC

Booth #: 1525  
100 Oakwood Ave, Suite 350  
State College, PA 16803  
United States  
(814) 237-9340  
kyle@softgenetics.com  
www.softgenetics.com

Featuring NextGENe software for analysis of all NGS data now including CNV, HLA, and Somatic Analysis modules; Geneticist Assistant NGS Workbench, a knowledge base for the archiving of variant predictions; GeneMarker with new Fragile X module; ChimerMarker, Chimerism Analysis software and Mutation Surveyor software for the analysis of Sanger Sequences. SoftGenetics is providing no cost trials of each program.

St-Sulpice, 1025  
Switzerland  
+41 21 694 10 60  
jbrochant@sophiagenetics.com  
www.sophiagenetics.com

Global leader in Data-Driven Medicine, SOPHiA GENETICS is a technology company which has developed SOPHiA, the collective artificial intelligence for clinical genomics, helping healthcare professionals better diagnose and treat patients. By enabling the rapid adoption of genomic testing worldwide, turning data into actionable clinical insights, and sharing knowledge through its community, SOPHiA GENETICS is democratizing Data-Driven Medicine to save lives.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Infectious Diseases; Leukemias and Lymphomas; Solid Tumors; Clinical informatics/Bioinformatics

**Technologies:** Next Generation Sequencing; Sequencing; Bioinformatics; Mutation/variant detection

### Standard Molecular, Inc.

Booth #: 2012  
One Broadway, 14th Floor  
Cambridge, MA 02142  
(617) 401-3318  
nathaniel@standardmolecular.com  
www.standardmolecular.com

Standard Molecular's mission is to make clinical genomic testing routine. Our tool, Continuity GIS™, is the first purpose-engineered Genomic Information System for molecular pathology. Continuity GIS™ manages molecular pathology workflow, variant analysis, annotation and signout, and sends HL7/XML discrete data to the EMR (Epic, Cerner, Meditech, Allscripts, etc.) EMR-integration of discrete molecular data enables precision medicine.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Inherited Conditions; Infectious Diseases; Leukemias and Lymphomas; Solid Tumors; Clinical informatics/ Bioinformatics

**Technologies:** Bioinformatics; Laboratory Information Systems

## Exhibitor Company Descriptions

### STEMCELL Technologies, Inc.

Booth #: 1011  
Suite 400 - 570 West 7th Avenue  
Vancouver, BC V5Z 1B3  
Canada  
+1 (604) 675-7877  
conferences@stemcell.com  
www.stemcell.com

EasySep™ by STEMCELL Technologies allows fast and easy immunomagnetic isolation of cells to increase assay sensitivity. The EasySep™ RBC Depletion Kit isolates leukocytes by depleting red blood cells (RBC) from samples without lysis, centrifugation or other pre-processing steps that can alter cellular function or interfere with downstream applications. EasySep™ can be automated using RoboSep™, the fully automated cell separation platform.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Leukemias and Lymphomas; Pharmacogenetics/genomics; Gene expression profiling

**Technologies:** FISH/ISH; DNA/RNA sample collection and/or preparation; Mutation/variant detection; Circulating tumor cell analysis (CTC)

### STRATEC Biomedical AG

Booth #: 1809  
Gewerbestr. 37  
Birkenfeld, 75217  
Germany  
8187  
v.eibl@stratec.com  
www.stratec.com

STRATEC Molecular, part of the STRATEC group, offers products for manual and automated DNA and RNA extraction from different samples starting with sample collection, stabilization and purification. At the exhibition STRATEC Molecular will present a suite of innovative products which enable to process liquid biopsy and FFPE samples for a standardized and robust workflow, especially in the areas of oncology.

#### PRODUCT CATEGORIES

**Technologies:** DNA/RNA sample collection and/or preparation; Cell free plasma DNA analysis (cfDNA)

### Streck

Booth #: 1713  
7002 South 109th Street  
La Vista, NE 68128  
United States  
(800) 843-0912  
custserv@streck.com  
www.streck.com

Streck is an industry leader in the development of laboratory products including a rapid real-time thermal cycler that can perform PCR in as little as 20 minutes and kits for antibiotic resistance detection. Also available are blood collection tubes that standardize methods for sample collection, stabilization and transport.

#### PRODUCT CATEGORIES

**Testing Categories & Services:** Infectious Diseases

**Technologies:** DNA/RNA sample collection and/or preparation; Cell free plasma DNA analysis (cfDNA); Circulating tumor cell analysis (CTC)

### Sunquest Information Systems

### Swift Biosciences, Inc.

Booth #: 1207  
58 Parkland Plaza, Suite 100  
Ann Arbor, MI 48103  
United States  
(734) 330-2568  
Info@swiftbiosci.com  
www.swiftbiosci.com

Swift Biosciences specializes in sample preparation for next-generation sequencing (NGS). We are an energetic, highly innovative company focused on creating better tools to empower NGS technologies and deliver superior science. Specifically, our Accel-Amplicon™ Panels are a proven, all-in-one solution for FFPE and liquid biopsy samples. They provide consistent reliability and reproducible results with a fast and easy workflow.

#### PRODUCT CATEGORIES

**Technologies:** Next Generation Sequencing; Sequencing; Mutation/variant detection; Single Cell Analysis; Cell free plasma DNA analysis (cfDNA); Circulating tumor cell analysis (CTC)

### T2 Biosystems

Booth #: 211  
101 Hartwell Avenue  
Lexington, MA 2421  
United States  
Info@T2BIOSYSTEMS.COM  
t2biosystems.com

T2 Biosystems offers the T2Sepsis Solution™ for the direct-from-whole-blood identification of organisms causing bloodstream infections in 3 to 5 hours. With the faster availability of more accurate results independent of blood culture, hospitals are realizing shortened ICU and hospital lengths of stay and reduced use of unnecessary antimicrobials.
